Federal regulators may look for ways to mandate faster transition to all-digital television if the TV industry fails to move quickly enough on its own. This, according to a Federal Communications Commission official speaking on Friday April 5th.

The comments are from Ken Ferree, chief of the FCC’s Media Bureau. And what he has said adds emphasis to a proposal by the agency's chairman that aims to bring digital TV to more American viewers.

FCC Chairman Michael Powell has challenged everyone involved in the digital conversion, including television networks, local network-affiliated stations, cable and satellite service providers and equipment manufacturers to voluntarily meet a series of goals on the way to a 2006 deadline.

Accordng to Ferree, Powell’s proposal, which was sent to Capitol Hill and the industry on Thursday April 4th is an effort by the FCC to pressure the industry into voluntary compliance. He says that Chairman Powell believes exposing more consumers to the technology of digital television will stimulate them to demand more and thus jump-start development. (Published report)

FCC TO UTILITY: STOP INTERFERING WITH HAM RADIO

The FCC has told GPU Energy Corporation of Morristown, New Jersey to clean up the harmful interference that the utility is causing to several area radio amateurs. In a letter to GPU Energy the FCC said that incidental interference from its Part 15 devices to operations of authorized stations cannot be tolerated and that use of the devices cannot resume until the harmful condition is corrected.

According to the W5YI Report, those hams complaining have been unable to find a satisfactory remedy through the GPU complaint resolution process. They turned

to the FCC which investigated. Now the FCC has told GPU that unresolved interference complaints may constitute a rules violation that could lead to fines. The FCC urged GPU Energy to contact the ARRL for advice in resolving the issues. (W5YI)

INDUSRTY NEWS: NEW DEALER & MANUFACTURERS GROUP FORMED

During the informal annual industry meeting of Amateur Radio manufacturers held in Milwaukee, Wisconsin and hosted by AES during Superfest 2002, the industry decided to create a formalized and official industry group for dealers and manufacturers.

The American Association of Radio Enthusiasts (AARE) was formed as a non-profit corporation for the promotion of amateur radio and emergency communications into areas outside of amateur radio and to provide a conduit for dealers and manufacturers to exchange ideas, to work together on projects, to help ham radio grow and to double the number of hams in 5 years.

Members of this group will be the manufacturers and dealers of radio and emergency products. The group will be ‘the voice’ of the manufacturers and dealers in radio, much like the American Radio Relay League is the voice of each ham radio operator. (AARE)

THE CONVENTION SCENE: HAMFESTS ARE SAFE

The ham radio convention season is in full swing, but some radio amateurs are asking if it’s safe to attend them. President Bush says that we have to put 9/11 behind us and all Americans have to resume normal life. Most of us have, and the shows are going on. But regardless if it’s the OSCARS or a tiny hamfest, event planners are now taking a closer look at show security. This includes the giant Dayton Hamvention. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, looks at what they are doing to keep you safe as you enjoy ham radio’s greatest show on Earth:

--

If you travel by air, or even visit your local police department, you have seen heightened security measures in place since the terror attacks of last September 11th. And while nobody expects an al-Quida sponsored assault on a hamfest, law enforcement and planners of even the smallest events cannot dismiss the possibility either.

A few weeks ago, the Dayton Hamvention mailed out a promotional flyer. One of the items it contained was an area dealing with show security. In reality, what was shown is nothing more than an update to what's been in place for several years, but as the magic weekend of May 17th to the 19th approaches, its important to take a look at what the Hamvention will be doing to make your stay safe and secure.

The rules in effect are the same we have all been living with since 911. Be prepared to show photo I-D upon request. Also be prepared to have vehicles, merchandise and personal items searched. This may be especially true of large containers such as backpacks.

Do you carry a weapon for self protection? Sorry, but no weapons will be permitted into the area. Hamvention says that even applies if you have a license to carry a concealed weapon. Leave the weapon at home. You won't be permitted in with it.

Nor can you bring in any ammunition, explosives, chemical or incendiary devices. Also banned are alcoholic beverages, drugs and burglary tools.

This year there will be tighter scrutiny of vendors as they bring truckloads of merchandise into the flea market and exhibit halls. Since most of you will arrive well after merchandise is in place, this will have little impact on the average attendee.

And very important. Everyone must display at all times, so it's clearly visible, a Hamvention badge or ticket.

For the Amateur Radio Newsline, I'm Henry Feonberg, K2SSQ.

--

Garry Matthews, KB8GOL, is Executive Director of Hamvention 2002. He recently told CQ Magazine that the planners are trying to take common-sense precautions to provide security for a show of this size. Matthews adds that 99% of Hamvention attendees will not notice anything different from past years. The most important thing is to know that Hamvention 2002 and every other ham radio show is doing everything to keep you safe. (CQ)

**

THE CONVENTION SCENE: NO BIG ACTS AT HAMVENTION 2002 BANQUET

Speaking about Hamvention 2002, the planners say that you have spoken. As a result there will be no big name acts at this years grand awards banquet. Jim Graver, KB8PSO, is the General Chairman of Hamvention 2002:

--
Graver: "This year we are returning to tradition of years past and will not have a post banquet entertainment."
--

A few years ago, the Hamvention added concerts by top talents to its famed Saturday night gathering. Among those who have appeared are Joe Walsh and the Smothers Brothers. And even though the entertainment has been well received,

there has been a call from the ham community to get back to basics. And says Graver, so it shall be.

--
Graver: “We have gotten feedback from our attendees saying that they would like to have the same banquet that they used to have years ago. So, in 2002, the Hamvention is going to deliver just that: A banquet with great food, a celebration of the award winners, fantastic guest speakers and of course prize drawings.”
--

Jim Graver has a lot more to say about Hamvention 2002 and what will be happening this year. You can hear it in Part 2 of Hap Holly’s exclusive interview with KB8PSO. Just take your web browser over to www.rainreport.com and click on this weeks special. Or call area code 847-827-7246. That’s 847-827-R-A-I-N. (ARNewsline(tm))

RADIO LAW: DIREC-TV SUES RADIO PERSONALITY OVER ALLEGED SIGNAL PIRACY

DIREC-TV Inc. is taking a New York City radio personality to court. This as it files suit against WFAN radio personality Sid Rosenberg alleging he violated the Digital Millennium Copyright Act and the Federal Communications Act by stealing its programming.

DIREC-TV says that on March 11th, while talking with Don Imus on the "Imus in the Morning" show on MSNBC, Rosenberg allegedly said he had used an illegally modified access card to steal DIREC-TV.

Although air personality Imus is said have told him what the was doing is "dishonest" and constitutes "stealing," Rosenberg allegedly continued to "boast" about using the illegally modified access card to watch movies and sports.

DIREC-TV says that with this lawsuit it is sending Mr. Rosenberg a very clear message. One that says using an illegally modified access card to receive DIRECTV programming is stealing and it violates federal law. Larry Rissler, vice president of DIREC-TV's Signal Integrity office adds that the company has a transcript of the program and what he calls Mr. Rosenberg's brazen comments on national television of stealing DIREC-TV programming. (DIREC-TV release)

NAMES IN THE NEWS: STEVE DIMSE K4HG HONORED BY NOAA

The National Oceanic and Atmospheric Administration has named Steve Dimse, K4HG, of Tucson Amateur Packet Radio, as recipient of one of its Environmental Hero Awards for the year 2002. Dimse, of Cudjoe Key, Florida is being honored for his volunteer efforts in real-time citizen weather observations.

The data collected by Dimse and other volunteers is used for numerical weather prediction research at NOAA's Forecast Systems Laboratory and for training and research at the National Center for Atmospheric Research. In Florida, the data

is used by National Weather Service’s Weather Forecast Offices for local area prediction. It is also used at Kennedy Space Center for weather prediction in support of launch operations.

Each year the agency presents a number of Environmental Hero Awards to people who don't work for NOAA, but have contributed a great deal to NOAA's ongoing job of providing environmental services to the citizens of the United States. For 2002, Dimse was one of five people chosen for this honor. (NOAA)

NAMES IN THE NEWS: GM3ITN INVITED TO FAULKLAND ISLANDS

Les Hamilton, GM3ITN, has been invited by the Falkland Islands government to visit the islands for the 20th anniversary of their emancipation. Hamelton played an important role in making the liberation happen. Jeramy Boot, G4NJH, has more.

--

It was Les Hamilton who first informed the UK government that the islands had been invaded. On the 2nd of April 1982, he received first-hand reports that the Argentine flag was flying over the islands. Les was therefore the first person outside the islands and Argentina to know that an invasion had taken place. He phoned the Ministry of Defense, who informed then Prime Minister Margaret Thatcher.

GM3ITN remained in contact with VP8 stations even during the period of occupation, passing vital information on to the MoD. Les and his wife Pilar also intercepted Argentinean radio communications, which Pilar - a university lecturer in the Spanish language - translated for the MoD.

Jeramy Boot,G4NJH.

--

The Hamiltons will be flying to Port Stanley for the 20th anniversary celebrations which take place on June 14th. Until recently, Les Hamilton's role had been a closely-guarded secret, known only by senior British politicians, military intelligence officers and a select group of radio amateurs. (GB2RS)

HAMVENTION 2002: THE HARA ARENA STORY

Earlier in this weeks newscast we spoke about plans for this years Dayton Hamvention. As most of you are aware, Dayton’s HARA Arena has been the home of the Hamvention for many years. As a result the HARA has become as famous as the show it hosts. But there’s a lot more to the HARA story than just the Dayton Hamvention as we learn from Amateur News Weekly’s Jack Parker, W8ISH:

--

The HARA Complex is as unique as its history. In 1956, a dance hall called the Wampler Ballarena was built as the cornerstone of what is now a six building exhibition center. Originally, the location was a thriving, family-owned fruit orchard. Today it is a thriving, family-owned entertainment, conference and exhibition facility.

Very few entertainment complexes are privately owned. Even fewer are family owned. You see HARA was named by founding brothers Harold and Ralph Wampler. The arena building, built in 1964, ushered in entertainment to the Dayton area never seen before. The Rolling Stones, Elton John, The Who, Neil Diamond, The Beatles, The Grateful Dead have all played at the facility.

The HARA has survived and prospered by combining the professionalism of one of the areas largest exhibition centers with the care and personal concern of a family business. Because of this the HARA has been the catalyst to successful hockey in Ohio's Miami Valley. The Dayton Gems and later, the Dayton Bombers, have both enjoyed success while on the HARA ice. But, most agree, the one event that has put HARA ARENA on the map worldwide, is the Dayton Hamvention. It’s where the Amateur Radio Community and a family owned business meet to carry on a wonderful tradition.

For Amateur News Weekly, Im Jack Parker, W8ISH

--

Today, the HARA Arena remains the home to many high profile events for the Dayton area. This includes Disney On Ice, Sesame Street Live, the Silver Sticks Hockey team and of coarse the Dayton Hamvention. And, contrary to rumors on the Internet, the Hamvention says that it’s there to stay. (ANW)

**

EMBARRASSING TECHNOLOGY: SPYWARE DEBACLE DISCLOSED

Call it a gotch’ya. This as thousands of Internet users who thought they were installing a program for sharing music and other computer files apparently accepted a program at the same time that tracked their Web surfing habits.

The tracking program, or spyware, linked Internet users to an on-line sweepstakes game called Click-Till-U-Win. But the site was also collecting data on other recent cyberspace visits by the surfer’s computer.

Spyware is a clandestine computer program downloaded to your computer without your knowledge that can track your Internet-surfing habits without your consent. These types of programs exist in the open elsewhere on the Internet, but in this case there was no disclosure and no option to reject.

Now at least three companies are posting new versions of their software on the web without the tracking programs. And one of the web sites is actually offering visitors to its site an apology. (Computing Technology)

INTERNATIONAL - UK: BRITISH HAM RESCUED BY HAM RADIO

Turning to international news, word that a ham radio operator and his wife on board a yacht that ran aground have been rescued. This, thanks to the efforts of radio amateurs on the Maritime Mobile Service Net.

According to reports from the ARRL and GB2RS, Dave Beane, G0TAG, and his wife Sara, were aboard the pleasure craft Tao when it ran aground on a reef off the north coast of Cuba on the 26th of March. Apparently their initial call for assistance to the Cuban authorities had no response.

So they turned to ham radio and the 20 meter Maritime Mobile Services Net. Radio amateurs in the United States and in the Virgin Islands were able to alert the authorities in Havana via the US Coast Guard and the Swiss Embassy in Washington. Later reports via amateur radio indicated the couple had been rescued and that efforts to salvage the vessel were under way. (ARRL, GB2RS, Q-News)

**

SPACE AND SCIENCE: SPACE REFERIGERATOR

SpaceDaily reports that when Space Shuttle Endeavour blasted into space recently it carried aboard the world's smallest version of a relatively new type of refrigerator. Called a pulse-tube cryocooler, the device was designed, built and tested under an agreement between the National Institute of Standards and Technology's Boulder Laboratories, Lockheed Martin Corporation and NASA's Ames Research Center. (ANS)

A NEWSLINE FOLLOW-UP: A POLITICALLY DISORGANIZED 11 METER CLASS D SERVICE - PART 3

Over the past two weeks, Amateur Radio Newsline’s David Black, KB4KCH, has been looking at the not so political side of 11 meter Class-D C-B. In this third and final installment, David explores the reasons that there is little chance of C-B ever becoming a major two way radio political power:

--
The Citizens band radio service has a unique distinction. For all the years it has existed...for all the people who have bought and used 11 meter radios...for all of the public exposure CB has obtained TV, radio and the movies, 11 meter Class D C-B remains the only major radio service in the U-S without political representation in Washington. No support either before the FCC or Congress.

In the mid 19-70s, the Government held conferences to find better ways to use C-B. Today's Government leaders give it no attention. Congress and local governments are tired of consumer complaints against C-B operators running illegal power and who interfere with all sorts of consumer electronic gear. As a result, federal regulations are now in place that give almost any law enforcement official the ability to shut a C-B operator down. The C-B operator can appeal, but it is a long, and costly process.

So why is nobody on 11 meters seriously attempting to organize users of the band? As one former CB enthusiast suggests: Perhaps it's the sheer diversity of the CB radio community. CB has over-the-road truckers, sidebanders, emergency monitors, numerous private nets, the occasional family highway trip, and the usual assortment of troublemakers. Each of these groups operate separately and independently of the others with apparently little knowledge or regard for other uses of the band.

Whatever the real reason or reasons, one simple fact remains. When it comes to having a voice before the FCC and Congress, CB radio is out in the cold. Chances seem slim it will ever have such a voice. And without that, C-B operators like Gary D. White in Illinois are likely to continue to face Disorderly Conduct charges for disturbing anyone by transmitting on the 11 meter Class D Citizens Band.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

In closing, a word to those who have written. Some with questions. Other to add their own commentary. We sincerely appreciate your taking the time to write. You perspectives have been included in this final wrap-up. We thank you for your help in telling the story. (ARNewsline)

I am putting up a Diamond dual band vertical antenna. It will be for 2m and 70cm with about 60 feet of LMR400 coax never run underground.
My problem is should I buy the antenna with the UHF or the N connector? What are the pro's and con's to both? Is a UHF the same as a PL259?
And if one connector is better than the other then why is there any choice?
Also I have experience in soldering up PL259's but no experience with N connectors. Are they hard to solder up to coax?

The N connector is a constant impedance, where the UHF, or PL259 is not.
Especially if you're going to run some power on 70 cm, the N is preferable,
moreso at higher frequencies.
Why are there so many connectors? I dunno. The history probably involes the
military.
My Collins S-Line uses RCA connectors at the 100W level and N connectors at
high power.
N connectors are no more difficult to assemble than PL259 (UHF) connectors

For this app, either will work OK.

> What are the pro's and con's to both?

The N connector is a constant impedance, waterproof connector. The UHF
(PL-259) is neither, although proper preperation and installation of the
UHF connector minimizes these issues considerably. Again, for your use, it
doesn't make a lot of difference either way.

> Is a UHF the same as a PL259?

Yes

> And if one connector is better than the other then why is there any
choice?

Because choice is good ... :>) (and they sell to a global market, where the
standards can vary)

> Also I have experience in soldering up PL259's but no experience with N
> connectors. Are they hard to solder up to coax?
>

Not harder to solder, just requires more precision. The coax has to be cut
and prepped to exactly the correct lengths or the connector does not
assemble properly. And the soldering requires more precision, especially on
attaching the tip. Too much/sloppy solder and it won't go into the
connector body correctly.

I use UHF connectors for 2/440 and have no problems with impedance or
excessive loss, or moisture. Above 440, I use N connectors for their
impedance and loss advantages at higher frequencies, as well as
convenience - because this is the typical connector on antennas and
transmitters for these higher frequencies.

I once asked you to explain why dBsm - with which you claimed some familiarity - was not a power ratio but a ratio of two fiddle-factors having the dimensions of square metres when using the radar range equation to compare differing components of that equation.

The silence was deafening.

I give you another opportunity to explain.

PL-259 = "UHF" connectors ... a misnomer if there ever was one.

"N" connectors are designed for higher frequencies ... they are
"constant impedance" (they maintain 50 Ohms throughout and
thus don't make an impedance "bump" ... IF they are put together
correctly.)

I wouldn't use a PL-259 for anything above 6m myself, given a
choice (yes, I know that most 2m rigs and some 70 cm rigs come
with those connectors ... but I'd be willing to spend another buck
or two for the better "N" connectors if there was a choice ...)

The choice is based mostly on cost ... plain and simple ... N's
are more expensive than PL-259s ... and different, but not
exactly more difficult to assemble properly ... PL-259s can
be put together badly, too (and often are ...).

If it were me, I'd definitely spring for the N connector on a
2m/70cm dual band antenna ...

9913 works good in the desert. If you live anywhere where there is moisture, it will fail due to moisture (eventually). LMR-400 performs better, is more rugged, and doesn't get water in it. It is easier to attach connectors to as well.

LMR-400 is available from cable experts.

Sounds great!! But I don't think the airline would allow me the privlege of a "carry on tower", so i'll have to pass.

Herb Rosenberg <kg6ok@pacbell.net> wrote in message news:3CB910C1.771EF34E@pacbell.net...
How would you like to win a Complete Amateur Radio Station?
Interested? Well, if you come to the International DX Convention in Visalia, CA on Friday - Sunday, April 26-28, 2002, and you buy enough raffle tickets, and you are very very lucky.....

You could walk out with all of this..... (a complete custom dream station, and more.....)

For a HF radio,
How about an ICOM 706MKII, Alinco DX77, Kenwood TS2000, and Yaesu FT1000MP Mark V HF transceivers?

For HF Antennas,
How about a Force 12 XR5 Beam, M2 KT36XA Beam, Cushcraft AW3S, Fulid Motion SteppIR Dipole, World Radio ZX20 Beam, and Butternut HV2 Vertical?

For Cabling,
How about 125 feet of National Wire & Cable premium rotor and coaxial cables?

For a Tower,
How about a US Tower TX-455 (yes, the whole tower)

For a microphone,
How about a Heil Goldline Microphone & and Heil Proset Head Set and a Limited Edition Astatic D-104 Collector's microphone?

For a Key,
How about a Bencher BY-1 Keyer and a Idiom Press LogiKey Iambic Keyer

For Station Accessories,
How about a AOR Multi terminal PSK, RTTY, decoder, Daiwa Watt Meters, a HAL DPX38 RTTY Demodulator, ClearSpeech speakers, DXer Dream Clocks, and Coffee Mugs?

Oh, yeah, and don't forget about,
AEA HF Antenna Analyser, Astron RS35m power supplies, W2IHY 8 Band Audio Equalizer, SGC Stealth Antenna System, and a complete Polyphaser Grounding System?

And of course, for all of these radios and antennas, you will need,
Top Ten Devices, International Radio Filters, and Array Solutions antenna switches,

For your Neighbors,
How about some low pass filters, phone filters, and ear muffs?

For your YL and / or XYL, you will have to have,
Wild Women Pins and collectibles

For Miscellaneous Stuff, that no shack is complete without,
How about a few thousand pre-printed deluxe QSL cards, Collector item ARRL Operating Manual, Collector Item ARRL Antenna Book, and a wide assortment of other books, cd's, and publications?

For Callbooks,
How about your choice of CDROM Callbooks from Buckmaster and Radio Amateur Callbooks?

For Logging and Contesting,
How about logging and contest software from DX4WIN, Writelog, NA, EQF Software, LOGic 5, MiLog, and others?

For HF Mobile Operating,
How about mobile antenna products from HI-Q Antennas, K6MB, W6AAQ, KJ7U, and others?

How about deep deep discount certificates on the purchase of ACOM, ALPHA, and Henry Radio Amplifiers & Tri-ex towers?

For your Reading Pleasure,
How about a life time subscription to World Radio Magazine, and 1 year subscriptions to CQ Magazine, Popular Communications, DX Magazine, QRZ DX, Daily DX, Weekly DX, Low Band Monitor, RTY Journal, and the K1BV Awards Directories?

For VHF / UHF,
How about some VHF / UHF / FRS handheld radios?

For Gift Certificates,
How about gift certificates to Amateur Electronic Supply - Las Vegas, The Wireman, Idiom Press, Peter Dahl Co, and Elecraft?

Interested? Well, come to the International DX Convention, and you may just walk out with all of this stuff, and more.

For details, check our web site at:

http://www.qsl.net/visalia2002/

Do yourself a favor and avoid N connectors whenever possible. I know,
the purists will say they are better, and of course they are - a little,
not a lot. Not enough better to justify the extra cost and hassle. Yes,
they are a hassle. Almost no one does an acceptable job of installing
their first N connector. If you ever installed one with the center pin
even slightly off exact center, which usually results in breaking off a
segment of the receptacle in the female center, which then results in
the job of replacing not only the misinstalled N connector you just
messed up, but also changing out the N female assembly as well- a near
impossibility on some devices such as antennas- you'll understand why
General Electric used UHF/PL259's exclusively throughout their Master II
line of UHF gear, among others.
Some newer connectors are easier to install correctly and better than
older versions. How do you know which version you are buying? Is it an
"easy" one or not? There are an awful lot of "older" ones still out
there on the market.
The *small* advantage of N connectors over PL259/UHF types through
around 500 mhz is just not worth it.

Whew Dick, you just qualified yourself as a member of the typical 'ham'
community.
N connectors are a bit more challenging but only to those that would
feel a PL-259 is also challenging. If you can handle one, you probably
can handle the other. I don't mean to throw off on anybody but I have
known hams who just couldn't get the knack of putting on a PL-259.
As for the loss and match bizness...a PL-259 may well cut muster at 450
MHz but its a crap-shoot. A 'N' will almost always win. If you don't
have the mechanisms to measure (assuming that such is critical in the
application), you've really got better odds as a first-timer at 450 with
an N-connector.

WRONG! It's nothing like your silly comment about
Canada and the USA. In the case of the dB, it's
a matter of resorting to the fundamental definitions.

All measured quantities are expressed in numbers,
so your second comment is rather silly, OM.

I personally think N connectors are eaiser to install. You don't need a gazillion Watt solder gun to heat up the shell to solder the braid, thus melting the plastic outer sheath on RG-8. With N connectors, the braid is clamped to the shell by the rear nut. The onlt soldering needed is the center pin...if you go heavy with the solder, carefullu trim it off the outside of the pin with an exacto knife or utility knife (sharp) and you're good to go. To prove which connector is better, use a TDR (Time Domain Reflectometer) and look at the impedance bump of each type of connector. You will see the N is better. Like all connectors, it just takes practice like most other things in ham radio.

PROTEST!
========
The *small* advantage is valid only, and only when the UHF
connector is mounted at the coaxial cable *the correct way*.

It is not more difficult to mount a N-connector than an UHF.
It is HARDER to make a PROPER UHF-connector installation than
a corresponding N one. I've seen real TERRIBLE installations of
UHF-connectors. The problem is, You can install the UHF in a
Quick-and Dirty way, and You will have SOME fuctionallity, for

SOME time, still. A N-connector can be installed correctly, or it will not work (or breakdown). Installation of a N-connector is self-explanatory, PROPER installation of UHF needs EDUCATON. For an outdoor applocation such as an antenna connection, if You choose UHF, You'll have to make sure it is correctly done.

UHF-connectors should be forbidden in law. I'ts one of the worst inventions ever made. They ARE hard to install the correct way (You DO need a soldering iron > 75W, It is hard to be sure You got a good enough braid connection, You are more-or-less BOUND to do damage to the cable if You do not know the EXACT amount of heat that should be applicated by the soldering iron. Etc. Etc.)

N type PRO: Attaches the braid with a clamp, not solder. There's much
les risk of damage to the dielectric.

N type PRO: More weather resistant.

N type CON: Must strip and trim the cable accurately, or else the
center pin won't seat properly. That causes most of the trouble in N
type connectors.

N type CON: It costs more, but then again so does the LMR cable!

Losses: Not enough to worry about IF the PL-259 is of good quality,
properly attached (good soldering, especially), and you're not running
high power.

The UHF is the same as a PL-259.The N is harder to solder than the UHF. If you practice with one or two on a juck piece of coax, then put one on your coax, go with the N. In antennas for comercial equpi. they use N. If I could I put N on my equip.

Matt,

Last year in QST there was a very interesting article about an "indoor tower" project in which a ham installed a plumber's stack pipe (those white, 1 foot by 2 inch pipes you see on everyone's roof) in the roof on his garage, and then used the stack pipe as a feed through to hold a long mast, onto which he mounted a beam (which he rotated from inside the attic space of his garage). You wouldn't need the tower and rotor inside, but you could design the supports for the antenna so that they were inside the roof, nailed into the trusses. This would create a very clean, uncluttered look outside - with just as much strength as one of those ugly tripods. When you leave this QTH, you just remove the mast pipe and put a cap over the top of the stack pipe.

Hey, no fair! Before you get to have that law passed, you have to
honor the priority of another "Get rid of a truly terrible connector
design" project - one intended to stamp out the fundamentally-evil RCA
connector. Talk about a bad design... yuck.

I'm only half-joking... ;-)

I used a TV strap mount to attach it to a small chimney. Whatever you decide, plan on guying it. This antenna is 24 feet tall and a bit top heavy. A few guys will keep it under control. Mine aren't tight but they keep it from swaying too much. With decent guying your bottom attachment doesn't take as much strain either.

I read a test report in which the author compared UHF and N connectors on a network analyzer. I was surprised at how bad the UHF connector actually is at UHF...he measured about 1 dB insertion loss per UHF connector vs. about 0.2 dB loss per N connector at 440 MHz. Add the loss of the coax at UHF to twice the insertion loss, and you've cut your effective power in half! Yikes!

I found this article enlightening:

I always found that the easiest way to solder them was with a
resistance soldering "Iron" (More like carbon tweezers). I don't have
a set at home (Bummer)

Was the insertion loss due to mismatch or to actual dissipative loss? If it's mismatch, the "loss" can be eliminated by a matching network.

Here's an example to show the difference. Suppose the connector is right at the load, and that the generator is set up to provide 10 volts RMS (2 W) to a 50 ohm load. The generator voltage is then 20 volts RMS. If the connector's impedance at the test frequency is a resistance of 12.2 ohms, the load will see 50/112.2 * 20 = 8.91 volts RMS, a reduction of 1 dB from the 10 volts it would have gotten without the connector. If this is happening, the connector loss is truly 1 dB, and the loss can't be recovered. But on the other hand, suppose that the connector's impedance is a pure reactance of 50.9 ohms. The load will see 100/(sqrt(100^2 + 50.9^2)) = 8.91 volts RMS just like it did with a resistive connector impedance. So the "insertion loss" is 1 dB, just the same as for the resistive connector. But this is different. We can make the insertion "loss" disappear entirely simply by adding a series reactance of the opposite sign at the connector. This cancels out the reactance, and the load gets its full 10 volts RMS (2 watts). This second case shows the effect of, and cure for, the impedance "bump" caused by a connector that doesn't have the correct constant internal impedance. In many cases, you'll have a matching network anyway, so you can adjust out the effect of the impedance bump with minimal degradation to your system. (The only possible degradation is a slight increase in the SWR on the transmission line, if the mismatch is at the antenna and the matching is done at the transmitter. The increased SWR could lead to increased loss if the line is quite lossy to begin with and the SWR increase is appreciable.) A UHF connector with Teflon insulation isn't likely to have much resistive loss -- measured "insertion loss" is more likely due to impedance mismatch.

"Insertion loss" is similar to the concept of "mismatch loss" or "reflection loss". I recently wrote about those in the thread "Suggest coax for long run" in rec.radio.amateur.antenna, on March 27 and April 10. You should be able to find these at http://groups.google.com. There was also some discussion recently about misapplying modeling results to reach invalid conclusions. If a measurement is made of a connector's "insertion loss" and it's taken to imply that it represents real dissipative loss, then this could be a good example of that misapplication being done.

I see a lot of responses to the UHF-N question and I'll add my $.02.

UHF connectors were designed when UHF was considered to be anything
about 30 MHz. Currently the connectors come with a wide variation in
quality. If you are determined to use an UHF connector get ones with
teflon dielectric. I have seen them with nylon dielectric which will
melt with moderate power at even 2M. Nylon is very lossy but is cheap
compared to teflon. I find that it takes longer to properly assemble
an UHF connector than an N. There is one solder connection on the N and
two wrenches are required to finish the assembly. The N connector will
have good dielectric material unless you are able to find a really off
brand source.

The other thing you need to consider is the loss of LMR400. If you are
planning a run over 50 feet you might consider something like 9913.

Almost exactly. If you want LESS loss, go to LMR 600, or even 800.

A common misconception... UHF (the connector) does not mean Ultra
High Frequency, it means Universal HF, as in "good for all uses
between 3 and 30 MHz". Of course, the definition of 'good' is
debatable in this case.

As I recall the story, N, BNC, TNC, and C were all designed by the
same two guys, Mr. 'N' and Mr. 'C'. Sorry, can't remember their
names or where they worked (Bell Labs?). Perhaps someone else does?

I've never had any trouble putting N connectors on. Keeping them
on...thats another story, at least on cable with braided sheild. They
can not stand much flexing. If you are using one on a rotating
antenna, make sure that you have the cable clamped so there is no
movement what so ever at the connector.

They were designed by Paul Neil and Carl Concelman of Bell Labs. The BNC is a 'Bayonet Neil-Concelman', and the TNC is a 'Threaded Neil-Concelman'. And yes, the Type-N and Type-C connectors come from the first letter of their last names.

Greetings,

Been away a week or two due to a virus (a worm actually) taking over my PC.
Almost anyway. I found this story on www.space.com and post it for entertainment
only. Off-Topic, but hope you enjoy.
Begin Copy Post:

The Martian Morse Code Challenge

www.space.com

By Douglas Vakoch

Some of the earliest proposals for making contact with extraterrestrial
intelligence (ETI) imagined communication with inhabitants of our Moon. But by
the 1870s, scientists knew that the Earth's satellite is too small to sustain an
atmosphere. Because the Moon is considerably smaller than Earth, it has a weaker
gravitational field, and thus all gases escape from its surface.

With no atmosphere, it was argued, there could be no life on the Moon. The
planet Mars, however, is considerably bigger, and even in the late 1800s it
seemed likely that our planetary neighbor might have at least a thin atmosphere.

When people started thinking about how to communicate with potential Martians, a
new challenge arose. Since the Moon is relatively close to Earth, earlier
proposals to signal possible inhabitants of the Moon relied on huge diagrams
"drawn" on Earth's surface.

But a similar message, if at all visible from Mars, would be much harder to see,
simply because of the greater distance. Therefore, an alternative approach was
suggested for interplanetary communication.

Though scientists today no longer believe there's any evidence for intelligent
life on Mars, the same methods work using radio signals for communication at
interstellar distances.

One example of this method -- proposed in 1920 -- would rely on a variation of
telegraph code, using flashes of light to attempt communication with ETI. How
would this work?

Imagine you were an early 20th-century astronomer, peering through your
telescope at Mars, and suddenly you saw a series of flashes from a point on
Mars' surface. As you watched more closely, suppose you noticed that the flashes
are of two different durations -- short and long - like the "dits" and "dahs" of
Morse code. Imagine, in fact, that you noticed the following sequence. What

would it mean?

dit dit dit dit dit dit dah dah dah dit dit dah dah dah dit dit dah dah dah dit
dit dit dit dit dit

As a hint, you might count the total number of "dits" and "dahs" and notice there are 25 in all. As a further hint, imagine you then noticed a flashing sequence of 36 pulses. And finally, you were able to make out a separate series of 49 pulses.

For starters, you might ask, "What do the numbers 25, 36 and 49 have in common?"

While it might take some ingenuity and a few false starts, the hope of the message-makers is that eventually you would come to recognize that each of these numbers is a perfect square, or a number multiplied by itself. If you multiply five by five, you get 25; six squared is 36 and seven times itself is 49. At least part of the message has been understood.

The next interpretive leap involves turning these strings of numbers into two-dimensional pictures. Starting with the sequence of 25 "dits" and "dahs," you might rearrange all of these pulses into five rows, each with five pulses. If you did, you would see the same 25 pulses in a new format:

dit dit dit dit dit
dit dah dah dah dit
dit dah dah dah dit
dit dah dah dah dit
dit dit dit dit dit

To make the pattern a bit more obvious, suppose we replace the "dits" with "ones" and the "dahs" with "zeros." The message would then appear as follows:

1 1 1 1 1
1 0 0 0 1
1 0 0 0 1
1 0 0 0 1
1 1 1 1 1

Now let's do the same for the longer sequence of 36 "dits" and "dahs." When reconstructed in the same manner, we would discover the following message:

1 1 1 1 1 1
1 0 0 0 0 1
1 0 0 0 0 1
1 0 0 0 0 1
1 0 0 0 0 1
1 1 1 1 1 1

Finally, imagine that the message of 49 pulses yielded the following two-dimensional array:

1 1 1 1 1 1 1
1 0 0 0 0 0 1
1 0 0 0 0 0 1

```
1 0 0 0 0 0 1
1 0 0 0 0 0 1
1 0 0 0 0 0 1
1 1 1 1 1 1 1
```

After seeing enough messages in this format, we might recognize a recurring pattern. All of the pulses at the outside of the message are "dits" and the remainder of the pulses in the interior are "dahs." In effect, we see a pattern reminiscent of a picture frame, the same for each message.

But what good is a picture frame without a picture inside it?

Even these early proposals for sending messages by interplanetary Morse code suggested sending something more interesting than pictures of empty squares. In next month's column we'll look at some of the sorts of pictures that can be communicated using this decades-old scheme.

Haaaaaaaaaa! This is how the engineering staff justifies putting
an ATU network in your ham rigs! So that you can tune out the
SWR hump in your PL-259/SO-239 junction out to the antenna.

I have seen weirdness when tuning infrastructure, where I get
apparently more power out of the other end of the coax or out
of a duplexer, and different readings with different coax jumpers
with PL-259s! Instrumentation is meaningless until you do away
with them.

Hello Everybody, I'm Marcello from italy, i could if is possible an information about 2 antennas.
The antennas are the ANTRON 99 and the IMAX 2000. I saw on internet that are good antennas, the second is better than the first!
My question is the db gaind that many web site write about 9 db for the first and 11 for the second is correct?

And......this two antennas as better than a simple 5/8 made in alluminium like SPectrum 1600 Mantova or SIRIO 827?

I have a Spit Gain 5/8 with 24 radial, you advise to change antenna for the Antron 99 or IMAX 200, or I must stay with my actual antenna?
Thank to all want answer me.

I'm talking about vertical antenna for 27 Mhz.

Excuse for the Enghlish error!

Marcello

Forget the UHF, they are crap. Use the N, it maintains the 50 ohm
impedance through the connector as best as anything. Be as anal as
possible about the installation of the connectors. Wrap them with
monkey shit and tape when done.

C'mon folks, let's get serious, and practical!

Is a Type N connector better than a UHF connector? Yes.

But, what are we connecting this cable/connector to? An antenna, which at best has a 2:1 VSWR over the frequency range of interest. That is, it may look like 25 ohm, or 100 ohm, or any combination of resistance and reactance which results in a 2:1 VSWR. And if the connector adds a VSWR of 1.01:1, or 1.1:1, or whatever, to this, you're never gonna see any effect, positive or negative! Yes, the UHF connector could actually improve the match of the cable to the antenna.

And at the other end, we have a receiver or transceiver with a "50 ohm" impedance. How close to 50 ohm is it? Do you really believe the receiver/transceiver is a better match to 50 ohm, over a broad frequency range, than is a UHF connector? If you do, you're living in a dreamworld!

A much more important consideration should be things like:
water tightness; is the end of the cable well sealed against water intrusion?

mechanical; is the flexing of the cable going to result in loss of electrical or mechanical integrity?

Now, there are places where the effect of the "betterness" of a Type N connector may be seen. In connecting, for example, multiple lengths of cable through 2 connectors and a nipple, it is good practice to use the connector, and nipple, which have the better match to the cable impedance. That may very well be a Type N, or Type C, rather than a UHF connector.

But, when connecting a cable to a totally mismatched antenna, or receiver, let's use a little common sense. You could even use one of those infamous RCA plugs, and not see any observable difference in performance.

Let's get practical, just solder the coax to the antenna, that is the
best connector.

How about RF shielding? N connectors have far better shielding than a UHF connector. Probably not critical on your 2m radio in the car but in our repeater buildings on top of the mountain, you'll find nothing but N connectors on all of our microwave racks and Trunked Radio systems.

Dan

1640. ARNewsline 1288 - April 19 2002

Amateur Radio Newsline™ Report 1288 - April 19 2002

Amateur Radio Newsline report number 1288 with a release date of
Friday, April 19th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur Radio volunteerism is praised at the N-A-B Ham Radio Reception and a Montana senator calls for a change in the way the United States oversees the electromagnetic spectrum. These stories are first on Amateur Radio Newsline report number 1288 coming your way right now.

(Billboard Cart Here)

**

AMERICA AT WAR: HAMS PRAISED AT NAB AMATEUR RADIO MIXER

The heroism of ham radio operators who donate their services in times of national disaster, and especially those who volunteered in the days following the 911 terrorist attacks was not forgotten at this years National Association of Broadcasters Ham Radio Reception. The April 10th gathering was co-hosted by Kenwood Communications and CQ Magazine. It was CQ publisher Dick Ross, K2MGA, who took time to honor those hams who put their lives on hold, to be there when needed:

--
K2MGA: “I do want to take a moment to focus a little bit of attention on how proud we have a right to be as Radio Amateurs. I think we saw that on September 11th, when thousands upon thousands of hams throughout the United States jumped in their cars -- or -- in the New York are -- hopped onto the subways -- with back packs filled with radio equipment and did whatever they could. They are still doing ‘whatever they can,’ and that is really what Amateur Radio is all about.”
--

Ross comments were enthusiastically received. CQ was represented at the gathering by Ross and Editor Rich Moseson, W2VU. Also making presentations were Kenwood’s Paul Middelton K4NUH and ARRL President Jim Haynie, W5JBP. 600 to 800 radio amateurs who attended the NAB convention also usually show up at the Ham Radio Reception.

**

SPECTRUM ISSUES: SENATOR TO ASK FOR COMPLETE SPECTRUM REVIEW

A U-S Senator says that its time to overhaul the method by which the United States manages the entire electromagnetic spectrum. Montana Senator Conrad Burns, said on Monday, April 15th that he plans to introduce such legislation. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

Senator Conrad Burns says that he expects a two to three year battle over the legislation he plans to introduce this congressional season. But Burns also told a packed audience at the recent National Association of Broadcasters Convention in Las Vegas that he is going to put together a total spectrum reform bill because he does not think that Congress should be piecemealing how it makes spectrum available.

Senator Burns told the NAB audience that he predicts an intense battle over the legislation affecting multiple constituencies. He noted that many frequency bands are used by government agencies like the Department of Defense Department. Burns said that he is still awaiting a report from the General Accounting Office which is reviewing a large number of spectrum issues and related government practices.

And what does this mean to ham radio? In the short term probably very little. In the long run it could affect our future survival.

Depending on the scope of the Burns legislation and how much of it -- if any -- is ever enacted by Congress, the future use of all spectrum could well come under a bureaucratic microscope. Those services that legislators do not feel justify spectrum could -- eventually -- loose it.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP

--

Earlier plans to move some government operations to other spectrum now have little support in the wake of the September 11th terrorist attacks. Meantime, numerous telecommunications companies are pressuring the government to make large portions of spectrum available quickly, to introduce new consumer wireless services. (Published reports)

**

HAM RADIO IN SPACE: NEW FRENCH HAMSATS COMING

AMSAT has announced that two new French Amateur Radio mini satellites or picosats are planned for launch on May 3rd. This, as secondary payloads with the SPOT-5 satellite.

The two hamsats are being funded, designed and built by AMSAT-France. They are battery powered and should operate from orbit about 40 days. Both will transmit recorded voice messages using Narrow Band FM along with digital telemetry. Data will be transmitted at 400 baud BPSK. Downlink frequencies are listed as 145.84 MHz and 435.27 MHz.

An Ariane 4 booster will carry the satellites to orbit but the ham radio birds will not be free floating. Rather they will remain fastened to the Ariane’s third stage at a panned altitude of about 800 kilometers. Both of these new birds will switched on about ten days after the launch. (ANS)

**

HAM RADIO IN SPACE: AMSAT-NA TO RE-EVALUATE THE FUTURE

Meantime, AMSAT North America President Robin Haighton, VE3FRH, has called a special Board of Directors meeting for April 20th. This, to review the current fiscal situation and to decide on a proper course of action for upcoming ham radio space projects.

In a published column earlier this year, Haighton had commented that financial support coming to AMSAT for the Eagle satellite and other projects have been reduced as a result 911. Haighton now says that this continues to be the case.

Haighton does say that the design of another satellite called Echo is progressing and he should have more information to make public next month. The AMSAT North America president adds that the organizations forum at the upcoming Dayton Hamvention will offer a closer look at several proposed satellite projects. (ANS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N-4-G-G-D Repeater serving Greensboro North Carolina.

(5 sec pause here)

**

ENFORCEMENT NEEDED: WORLDWIDE QRM TO 40 METERS

The March issue of the Monitoring System Newsletter talked about a rogue broadcast from Eritrea on 7.100 Mhz. A transmission that continues to be heard well in eastern North America.

According to the IARU, this broadcast can at times also be heard around the world. Also, the report says that its lower sideband can dominate the top few kilohertz of the 7.000 to 7.100 MHz Amateur band. (ANS)

**

ENFORCEMENT: FCC ARRESTS NYC UNLICENSED BROADCASTER

An unlicensed broadcaster has been arrested for refusing to shut down operations. Paul Dorleans was taken into federal custody on April 15th for operating an unlicensed FM radio station on 87.9 MHz in Brooklyn New York.

The FCC says that earlier enforcement actions had failed to discourage Dorleans' unlicensed operation of the FM Station. The FCC, on more than one occasion, had issued notices to Dorleans directing him to cease operation. And the U.S. Marshal's Service, in conjunction with the United States Attorney's Office and the FCC, had seized his radio equipment on one previous occasion.

The United States Marshals Service arrested Dorleans working in conjunction with FCC Agents and the Office of the United States Attorney for the Eastern District of New York. So far this year, investigation of unlicensed broadcast operation by the FCC's Enforcement Bureau has resulted in the shutdown of

over 20 unlicensed stations. Dorleans faces the possibility of a heavy fine and a prison sentence if convicted. (FCC Release)

**

ENFORCEMENT: FCC TO UTILITIES - DON'T INTERFERE WITH HAMS

The FCC has issued letters to five power utility companies to request that they contact and work with Amateur Radio operators in the area to resolve power line interference problems. According to FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth the utility companies are:

--
Hollingsworth: "Anderson Indiana City Utility, the Dominion Power Company in Richmond Virginia, Northeast Utilities in Berlin Connecticut, Southern California Edison in Rosemont California and the Soccoro Electric Co-Op in Soccoro New Mexico."
--

Hollingsworth says that the companies were instructed to report back in 90 days to outline the progress made in clearing these interference complaints. (FCC, RAIN)

**

SPECIAL COMMS: RADIO SOLO NOW ON THE GROUND

The United States military broadcasts to Afghanistan are still being widely heard on 8.700 Mhz, but are now land based. The broadcasts are being produced by the same unit that produced the Commando Solo airborne transmissions during the early stages of the war on terrorism. (Media Network)

**

NET INFO: BAJA NET MOVES

WB0YCQ reports that the Baja Maritime Mobile Net which meets 7 days a week at 8:00 am Pacific Daylight savings time has moved to 7.262 MHz plus or minus a few kilohertz. This is due to interference on the original net frequency. (WB0YCQ)

**

CONVENTIONS & HAMFESTS: SEVHFS IN LATE APRIL

The Sixth Annual Southeastern VHF Society Conference is slated for April 26th and 27th in Oak Ridge Tennessee. Program highlights include, antenna gain measurements, pre-amp gain and noise figure measurements, a Friday evening flea market with vendor displays, a Friday evening tour of nearby Ten Tec, and Saturday evening banquet with guest speaker Joe Dooley, P.E. of Oak Ridge National Laboratory. For more information contact Greg Robinson KB4NVD by e-mail to Rover@wireco.net (SEVHFS via VHF Reflector)

**

CONVENTIONS AND HAMFESTS: MT. BEACON HAMFEST POSTPONED

The Mt. Beacon New York Hamfest, scheduled for Sunday April 21st has been postponed. Planners say they are looking to reschedule. Stay tuned to Amateur Radio Newsline for an announcement of the new date. (KL7JCQ, WA2BSS)

THE SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with some words regarding Amateur Radio Newsline's current fiscal situation, here is Support Fund Administrator Andy Jarema, N6TCQ:

--
That's right. Its me. A.J.. And when you hear my voice you know I am here for one of two reasons. One is the bad – as in – help we need your financial support. The other is to say thanks to those of you who have kicked in to keep amateur Radio Newsline coming your way.

This week it's the bad. The numbers for the first three months of 2002 are in and its not good news. Right now we have about $145 in the bank and close to a thousand dollars in back bills sitting on my desk. And the people we owe money to like the phone company and our Internet providers want to be paid.

The bottom line is that this is once again a financial emergency. Only you can keep these weekly newscasts coming your way. We need your help, and we need it right now.

And remember. Amateur Radio Newsline Newsline is a federal 501c 3 corporation and a California certified non-profit corporation. This means that all contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066.

For the Amateur Radio Newsline Support Fund, I'm Andy Jarema, N6TCQ.

--

Again that's the Amateur Radio Newsline Support Fund, P.O. Box 660937, Arcadia California 91066. (ARNewsline™ Support Fund)

**

HAM RADIO IN SPACE: JERRY ROSS SETS SPACEWALK RECORD

United States Astronaut Jerry Ross, N-5-S-C-W has set a personal best . On Tuesday April 16th Ross made his 9th spacewalk on the latest of his seven

orbital flights. In doing this, the 54 year old retired Air Force Colonel set the record for the greatest number of flights and spacewalks ever by an Astronaut or Cosmonaut.

Prior to his current flight, N5SCW had logged 1133 hours in space.
Ross is flying for the seventh time and may not get an eighth turn. This is because of other astronauts in line for flights. (Published reports)

**

INTERNATIONAL-RUSSIA: SPACE TOURIST READY TO FLY

The world's second would-be space tourist is almost ready for takeoff. Jeramy Boot, G4NJH, has the details:

--
Russian space officials say that Internet industrialist Mark Shuttleworth has completed most of his training and is ready to visit the International Space Station.

Shuttleworth is a 28-year-old South African economist who made his fortune with an Internet business. He said he would conduct gene engineering studies while on the space station using animal stem cells. He said he hoped his research could be used to help find cures for Alzheimer's and Parkinson's disease.

Liftoff of has been set for April 25th from the Baikonur Cosmodrome in Kazakhstan. Shuttleworth confirmed that he is paying $20 million for the trip but in installments that will be complete only when the mission is over. That's the same sum American Dennis Tito, KG6FZX, paid Russian space agencies last year to fly to the international station, becoming the world's first space tourist.

For the Amateur Radio Newsline, I’m Jeramy Boot, G4NJH

--

Its not yet known if Shuttleworth will be licensed to operate the ham radio gear on board the I-S-S. (Space Adventures, published reports)

**

INTERNATIONAL - NEW ZEALAND: POWER COMMS STANDARDS TO BE SET

Powerline telecommunications and its potential as a source of interference will be a major topic to be discussed in New Zealand. This, from September 16th to the 30th. The gathering is slated for the city of Christchurch where a newly established committees, is working to create common standards for information technology equipment and radio and television products. According to NZART, this should prove beneficial to that nations radio amateurs. (NZART)

**

INTERNATIONAL – ZIMBABWE: BBC SUSPENDED FROM CAB

The Zimbabwe Broadcasting Corporation has been suspended from the Commonwealth Broadcasting Association for a year. This, as the print Media in Zimbabwe is becoming increasingly outspoken about the Zimbabwe Broadcasting Corporation and its political role in that nation. More information is on the web at http://www.rnw.nl/realradio/html/zimbabwe-latest.html. (Media Network)

**

DX

In D-X, The VK9ML DXpedition to Mellish Reef should be on the air as this newscast goes to air. The multi-national team will be on the air through the 22nd of April. (GB2RS)

Also, GB2RS reports that another major multi-operator DXpedition will be active as XW1HS from Laos. The operators, all resident in Thailand, include American, British, Swedish and Spanish operators, as well as 11 Thai nationals. (GB2RS)

**

THAT FINAL ITEM - HAM RADIO IN THE MOVIES: IMAX ISS MOVIE PREMIERES

And finally this week, ham radio is not only at a film premiere. It is actually an important part of the movie. This as the new 3-D motion picture about the International Space Station gets to the giant screen in a press preview on April 16th. Amateur Radio Newslines Bill Pasternak, WA6ITF, has more:

--
The movie we are talking about is the new IMAX film called Space Station. Amateur Radio on the International Space Station is a part of it. According to ARISS Program Manager Frank Bauer, KA3HDO, the film simply breathtaking:

--
KA3HDO: “It was the closest way that an individual could experience space without going to it themselves. It was spectacular from the persoective that you really felt like you were there. hat you were part of the team that was making Space Station happen.

It just was phenominal. Breathtaking views of the Earth, of Space Station and inside the cabin of the space station.”
--

Bauer says that it was pretty awesome to see Astronaut Bill Shepherd talk to the Texas students with using ham radio equipment. Also, ARISS appears in the movie’s credits.

According to Bauer, there were 21 members of the ARISS volunteer team attending and supporting the sneak preview. Visitors included Astronauts Bill Shepherd and Yuri Usachev. Also attending were the film’s producer Toni Meyers and National Air and Space Museum Curator Jack Dailey. The comments were all glowing and Bauer says that this is a must see movie.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

Consult local listings to find out when Space Station will be shown at an IMAX or OMNIMAX theater near you. (KA3HDO, ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules, an application and information on contacting us is on our only official website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Mert Garlick, N6AWE, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Yes "navEl" would be an umbilical cord and "navAl" would be those
squids! ;)

I use N type connectors exclusively in my HF work. I also prefer crimp type connectors, vice the solder variety.
While it is possible to get a better solder job than a crimp job, it takes less skill
to do a decent job with a crimp tool. I've seen way too many hack jobs on solder connectors to begin to count 'em. And believe me it's a hell of alot easier to replace a crimp connector when it's still pitch dark at noon, there's a 20 knot wind and the temp is dropping below -40. This makes you glad you shelled out the extra bucks for a crimp tool instead of a propane soldering iron!

As for RG-9913, it is lower loss and cheap, but BEWARE
- It's easier to cause physical damage on this cable
- Water gets into the cable through the connector, penetrates the spiral dielectric
and turns the last meter of the cable into a gelatinous dummy load. A tiny bit of silicone RTV at the end will prevent this headache.
- Of course it needs a different type of connector than RG213

That could well be true, but I have seen many more cables pulled out of
the connector with crimp-type connectors than with solder-type, especially
with BNC. I also think the crimp-type is worse in moist conditions.

(of course you want to protect the connector against moist and cable stress
in all cases)

No problem with RF shielding. Phelps Dodge used UHF fittings on their
6 can VHF duplexers for years, and they (Celewave) still continue to do
so. Two UHF
females on each can. That's a total of 16 UHF fittings per duplexer set,
and the product delivers 100 dB isolation. Not my first choice in
connectors, but
it really depends on the skill of the installer for most VHF applications
rather than
design limitations.

Microwave racks and trucked radios operate well above the frequency range
the gentleman who started the thread asked about.

I agree with Walt.

With all due respect Rob,

There is a space agency that I know of where crimp on connectors are
mandatory when using BNC. They have been stressed to 2000 pounds pull
before failure.

I have seen the type of failures where you can simply pull a connector
off. But this is usually due to either wrong components being used for
the type of cable, and/or wrong tooling crimping the connector on.

My opinion is that hobbyist will do better with soldering a connector on
because of the myriad of cable types he/she is trying attach a BNC
connector to. I know I would have to keep quite a collection of
connectors and tools to meet even my occasional needs.

Best Regards

Christopher Cox

are you sharing the comport IRQ with anything else?
some times differnt softwares wont share well
hey have you checked out sharps logger its not free but its a great piece of
software

Source record: 13443

I think it is the height of stupidity that the FCC (presumably
endorsed by the ARRL) allow the use of callsigns from other DXCC
entities by stations within the 48 contiguous states.

For example, yesterday I worked Jim Kehler, KH2D on 20m CW ... but he
was operating from his new QTH in Florida! I have also worked KL7's
in Pennsylvania and AH0's in NJ. What nonsense!

It was bad enough when they saw fit to destroy the original, sensible
call-area system (W1 -W0) in order to sell "vanity" callsigns, but
this is going to ridiculous extremes. If we were to apply similar
logic, I could use the call GM3NYY in England because I happened to be
first licensed in Scotland 42 years ago!

73 de G3NYY
P.S. Look out for the GQ and MQ prefixes in June this year ... they
could be located in any one of six different entities! :-)))

Amateur Radio Newsline™ Report 1289 - April 26 2002

Amateur Radio Newsline report number 1289 with a release date of
Friday, April 26th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur radio aids in the aftermath of two rail accidents. This story is first on Amateur Radio Newsline report number 1289 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO ASSISTS AT CALIFORNIA TRAIN COLLISION SITE

Amateur radio played a pivotal role following two major rail accidents occurring within a few days of one another. On Tuesday April 23rd, a Southern California Metrolink commuter train headed to San Juan Capistrano collided with a mile long freight train that may have missed a stop signal and wandered onto the same track. 2 people on the commuter train were injured and over 260 injured. Local hospitals were swamped with casualties. Joe Moell, K0OV, has more:

--
About four times a year, the hospitals and emergency responders in Orange County, California, hold large-scale drills to test the patient triage and transportation procedures that must be followed in the event of a mass casualty incident. The Hospital Disaster Support Communication System -- an ARES group with agreements to support all 35 hospitals in the county -- is always asked to participate. So it was on Tuesday, April 23 as two dozen HDSCS members awaited their assignments for a mock hazardous material incident, to be staged on a shopping street in Brea, California at 9 AM.

But it was not to be. At 8:10 AM, just 5-1/2 miles away in the city of Placentia, a 6000-ton mile-long freight train collided with a Metrolink double-decker commuter train. HDSCS hams were immediately assigned to the fourteen hospitals expected to receive patients. For the next 4-1/2 hours, a total of 28 hams provided vital links between these hospitals, the county's Central Point ambulance dispatch, and the county's Emergency Medical Service agency.

--
[sound bite 1]
--
Other traffic included verifying victim dispatch, locating victims, providing hospitals with information for inquiring victim families, and liaison with hams supporting the Red Cross. Within some hospitals, hams provided direct

communications between triage areas, Emergency Departments, and Command Posts. Dennis Kidder WA6NIA tells how important this was at one facility:

--
[sound bite 2]
--
This was the 75th actual hospital communications emergency in the 21-year history of HDSCS. From Orange County California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

More on this in a future Amateur Radio Newsline report. (ARNewsline™)

(Note: For more information about this organization and about effective ham radio support for hospitals, go to www.hdscs.org.)

**

RESCUE RADIO: HAM RADIO ASSISTS AT FLORIDA DERAILMENT

Ham radio also helped provided coordination of emergency services following a train wreck near Crescent City Florida on Thursday April 18th. The accident happened at about 5:15 P-M Eastern time. Billy Williams, N4UF reports from Jacksonville:

--

The accident killed four passengers and injured 159 other passengers. It happened after the engineer of an ill-fated Amtrak train saw damaged track and hit the emergency brakes.

Rescue workers say 21 of the train's 40 cars including 14 of the 16 passenger cars derailed. Seven flipped on their sides, lying along the mangled track in a zig-zag pattern. Some passengers escaped through windows, while dozens of were trapped inside for hours.

Soon after the accident Bill Krueger, KF4EJD, was on the scene and at the wreck site relaying information to hams associated with ARES. Other hams soon had portable stations operational at the Putnam County Emergency Operations Center and the Crescent City High School shelter. A secondary shelter at Middleton-Burney Elementary School was established to assist in moving the passengers.

At the peak of activity, about 400 people were sheltered at Crescent City High School where a triage center had been set up. Also, a group from the Northeast Florida Chapter American Red Cross headquartered in Jacksonville was sent to the scene. This included several Jacksonville ham radio operators and a Red Cross Emergency Response vehicle.

Two hospitals in Jacksonville were staffed by Duval ARES operators to provide status reports to medical volunteers who were ready to head to the site if needed. Their help was not required and the hospital ham stations were secured at 10 PM Eastern time..

Meantime., the Florida Crown Emergency Net was in operation on the W4IZ Repeater System which was linked to the KF4PXZ system in Palatka. The net was in session from 5:30 to after 11PM.

There were many hams who volunteered in this emergency. Far to many to list here. And they once again proved that ham radio was willing and able to help when called on.

For the Amateur Radio Newsline, I'm Billy Williams, N4UF, in Jacksonville Florida.

--

According to news reports, many of the train's 418 passengers were senior citizens traveling between northern homes and winter retreats. (N4UF, ARNewsline™)

**

REALLOCATION: FCC PUTS ARRL NOVICE BAND PROPOSAL TO PUBLIC COMMENT

Comments are due to the FCC by May 16 on An ARRL petition that would eliminate the 80, 40 and 15-meter Novice and Technician Plus CW subbands. The information is from an ARRL Bulletin. Amateur Radio Newsline's Paul Courson WA3VJB, reports from the nations capital:

--
Designated RM-10413, the notice is aimed at reusing the current Novice spectrum in part to expand the 80 and 40 meter phone subbands. The ARRL's petition was filed in March asks the FCC to eliminate the Novice and Technician Plus Morse only subbands and divvy them up alleviate what the ARRL sees as overcrowding elsewhere.

If the FCC goes along, the current Novice and Technician Plus would be permitted to operate on the 80, 40, 15 and 10-meter General-class CW allocations at up to 200 Watts output. For General and higher class operators, the ARRL plan would implement changes in the 80, 40 and 15-meter phone bands, expanding phone segments for many amateurs.

But the ARRL petition goes well beyond just refarming the Novice bands. The League also seeks FCC permission to use spread spectrum on 222 to 225 MHz. It also proposes to expand the pool of special event call signs beyond the 1 by 1 format to include identifiers for United States territories that do not provide for mailing addresses. The ARRL also wants to incorporate into the rules a 1990 FCC waiver authorizing amateurs in specific areas of Colorado and Wyoming to operate on certain segments of the 33-cm band. Lastly, the petition asks that the government clarify rules to indicate that modulated CW is permitted for repeater station identification.

May 16th is the designated commentary cutoff date on RM-10413, and the FCC is expecting a lot of response on this one.

Paul Courson, WA3VJB, Washington.

--

And we at Amateur Radio Newsline want to know your position on the reallocation of the current Novice subbands? Do you like the ARRL proposal? Do you have what you consider a better one? Should the subbands even be re-farmed? We would like to hear from you. Please send us a short e-mail with your opinion and we will put some of them on the air in future newscasts. The electronic address is news;ine@arnewsline.org. (ARRL, ARNewsline™)

RADIO RULES: HAM PETITIONS FOR MANDATORY FIELD REPAIRABLE RIGS

How would you like to be able to take the cover off your radio and replace a plug-in highly complex integrated circuit, put the cover back on and have the radio work again. Kind of the way it was when tubes rather than solid state ruled ham radio. Well, that is what Nickolaus Leggett, N3NL, says hams should be able to do and he is asking the FCC to provide the rules to make it so. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--
Nikolaus Leggett filed his request to the FCC in February. After reviewing it, the Commission has assigned it as RM-10412 and has set May 16th as a commentary cutoff date.

What Leggett suggests is not really new. He believes that Amateur Radio operators should have a fighting chance to keep their own gear operational. He acknowledges that today's high tech equipment may not be component level serviceable, but he as asking the FCC to make mandatory certain key aspects of design so that a ham with a general knowledge of troubleshooting techniques might get a broken radio back in operation. Especially in time of a declared emergency.

--
Leggett: "What I proposed is that the Commission establish some sort of standards that would essentially establish that equipment be field repairable in some manner. Either it should have replaceable modules or replaceable circuit boards or parts on a circuit board should be spaced at a certain distance so that you can access them. There should be LED indicators on digital busses. There should be test points to take voltage and current measurements. In other words the equipment should be accessible for the Amateur to repair or modify it."
--

Leggett acknowledges that should the FCC adopt his recommendations it will probably lead some makers of ham gear to drop out of the United States Amateur Radio marketplace:

--
Legget: “My response on that is to look at the QRP field. There is a very nice Single Sideband QRP transceiver kit, which costs about $700. It is fully field repairable. It is advertised allot in QST Magazine, and this indicates that there certainly are vendors in the marketplace who can come out with a nice piece of equipment; highly regarded; very well reviewed; and at a reasonable price that is field repairable.”
--

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW in Los Angeles.

--

You can hear lots more with Nickolaus Leggett on this weeks RAIN report. Take your web browser to www.rainreport.com or call area code 847-827-7246. Meantime, the manufacturers who supply ham gear are expected to file in opposition to the Leggett rule making request. (ARNewsline™, RAIN)

**

SPECTRUM USE: FCC ON AMTS AND DENIALS TO HAMS

The FCC has approved proposed rules allowing geographic based licensing of coast stations in the Automated Maritime Telecommunications Service, the primary user of the 219-220 MHz band. According to the ARRL Letter, the Commission also agreed to consider an ARRL petition for changes in the rules governing the secondary amateur allocation at 219-220 MHz.

Amateur use of the band within 80 kilometers of an the Automated Maritime Telecommunications Service or AMTS coast station is currently requires permission from the AMTS licensee. Industry practice has been to routinely deny such requests, regardless of channel separation.

Now, the FCC will consider whether AMTS licensees denying permission should be required to give a technical justification for the denial. This, in conjunction with the ongoing 3-G proceeding that's considering use of 216-220 MHz for new technologies. (ARRL)

**

SPECTRUM REALLOCATION: CONGRESS PROPOSES DELAY IN UHF CHANNEL AUCTION

Congressional lawmakers say that they plan to introduce legislation to delay indefinitely the Federal Communications Commission's June sale spectrum currently used by television broadcasters to wireless carriers. Amateur Radio Newsline’s Norm Seeley, KI7UP, Takes a closer look at what is about to transpire:

--
The proposed legislation is being sponsored by House Energy and Commerce Chairman Billy Tauzin and ranking Democrat Representative John Dingell. The current law requires the FCC to auction the spectrum used channels television channels 52 through 59 by September 30th of this year. But if Congress says O-K, the measure will eliminate the legal deadline in September for an auction be conducted. It will also tell the agency not to go forward with the sale

slated for June 19th.

The anticipated congressional action is intended to give more breathing room for broadcasters to move off their current analog television channels. It would also give mobile telephone carriers more certainty about a date when they would obtain this spectrum so that they make available a number of new services.

So far, no one has gone to court to force the FCC to hold the sale.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

More on this story in future amateur Radio Newsline reports. (Published news reports)

**

RADIO RULES: COURT SAYS OWNERSHIP CAPS ARBITRARY AND CAPRICIOUS

Another blow to those who support a cap on the number of media outlets any one company can own. This, as a federal appeals court rules in favor of easing an FCC regulation that bars a broadcaster from owning two TV stations -- known as a duoploly -- in a single market. That is, unless there are eight other broadcast TV stations in that same market.

The court held that the Federal Communications Commission was arbitrary and capricious in excluding cable companies and other media outlets from the eight outlet standard. The ruling also admonished the FCC for failing to back up its argument that diversity and localism are protected by broadcast stations alone.

The court stopped short of declaring the duopoly rule unconstitutional and throwing it out altogether. Rather it directed the FCC to rethink that part of the rule dictating what constitutes a broadcast voice in any given market. (Published news reports)

**

RADIO LAW FOLLOW-UP: TOWERS VS. BIRDS

The United States Fish and Wildlife Service believes that communications towers are estimated to kill 4 to 5 million birds each year. And the service says that these kills violate the spirit and the intent of the Migratory Bird Treaty Act.

Now, a new organization called the National Antenna Consortium has been formed. Its purpose is to help communications companies deal with bird kills and other vexing issues associated with tower construction.

The CGC Communicator reports the group held a meeting at the recent National Association of Broadcasters meeting in Las Vegas. Speakers included Andrew Skotdal of KRKO Radio and attorneys Barry Umansky and Fred Hopengarten, K1VR. More information is on the web at migratorybirds.fws.gov (CGC Communicator)

**

NAMES IN THE NEWS: KB0G SPEARHEADING LINUX

A alternative computer operating system now has a ham helping to develop it. Nate Dueher, WY0X, reports:

--
One of the worlds largest Linux organizations now has a ham radio operator as its leader. Bdale Garbee, KB0G, of Blackforrest Colorado, has been elected as the 2002 Project Leader for Debian Linux. Bdale, who is known by many hams for his excellent work on many Amateur Radio projects including the RUDAK system on board AO-40 has also been on the software development team for Debian Linux for many years.

Debian -- spelled D-E-B-I-A-N -- has excellent support for many popular ham radio modes including CW, RTTY, packet radio, APRS, PSK-31 and many others. It is a version of the Linux operating system known world wide as dedicated to free software, quality and even ham radio. Bdale’s leadership skills should prove to be a match made in technology.

For the Amateur Radio Newsline, I’m Nate Nueher, NY0X, in Colorado.
--

More information on Debian Linux can be found in cyberspace at www.debian.org. (NY0X, ARNewsline™)

THE THANK YOU CORNER WITH ANY JAREMA, N6TCQ

Last week, Support Fund Administrator Andy Jarema, N6TCQ, presented the latest Newsline fiscal report. Andy is back with us this week to say thanks to those who supported Amateur Radio Newsline™ in the month of January. Here is N6TCQ:

--

In the month of January we heard from Benton Bonney, W4PE of Orlando Jodie Steggerda, N8ALJ of Champaign, IL. From California, we heard from GEARS, the Golden Empire Amateur Radio Society of Chico, as well as associate Joann Biegler, William Walters, WA2IBM of San Jose CARA, the Catalina Amateur Repeater Association Bruce Murray of Seal Beach and Jim Truran, KE6FNJ of Encino.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible. The address for the Newsline Support fund is PO Box 660937, Arcadia, CA

91066. I'm Andy Jarema, N6TCQ.

--

Thanks Andy. (N6TCQ)

**

RADIO BUSINESS: AEROFLEX BUYS IFR

If you use R-F test equipment to keep your repeater operating, listen up. According to Chris Boone, WB5ITT, Wichita Kansas based Aeroflex Inc. is acquiring IFR Systems Inc. – maker of the famed IFR Spectrum Analyzer and other R-F test gear. According to an April 15th press release, Aeroflex is paying approximately $60 million in cash for IFR. (WB5ITT)

**

HAMVENTION 2002: ARRL DIGITAL VOICE FORUM

The ARRL Digital Voice Working Group will host a Digital Voice Forum at the 2002 Dayton Hamvention. The session will include presentations from experts in the fields of digital-audio hardware, software and other technical details. Applications from rag-chewing to emergency communications to digital audio broadcasting will be covered. The date is Sunday, May 19th at 10:15 at the Hara Arena Meeting Room 1 immediately following the ARRL Forum. (ARRL)

**

INTERNATIONAL – UK: SPECIAL EVENT STATION GB2PK

On the international scene, word that United Kingdom special event station GB2PK will be on the air intermittently from the 26th of April for a month from the Porthcurno Telegraph Museum in Cornwall. The operation will use both vintage 1950’s military and modern ham radio gear. QSL as directed on the air. (GB2RS)

**

INTERNATIONAL – SOUTH KOREA: SPECIAL EVENT STATION HL17FCW

Also involved in a celebration HL17FWC. This station is on the air from South Korea to commemorate the 17th FIFA Football World Cup. QSL via HLZ0HQ. (GB2RS)

**

CONTESTS - WRTC 2002: UNITED ARAB EMIRATES TEAM INVITED TO 2002 EVENT

From the world of contesting, word that the WRTC 2002 Organizing Committee has decided to invite the A61AJ team from the United Arab Emirates to be the representative of the contesting community in the Middle East. According to a WRTC press release, the teams operating from A61AJ have achieved superb results over the past few years. WRTC planners say that this invitation seeks to recognize this fact. Team UAE will be led by Ali Al-Futtaim, A61AJ. Al-Futtaim is well known as the driving force behind the development of what is one of

the premier contest superstations in the Middle East and Asia. (WRTC)

**

DX

In D-X, Cuban VHF DX'er Arnie Coro, CO2KK says over the VHF Reflector that six meters is, properly named the magic band. According to Coro, while testing a balcony mounted half wave dipole he heard VK2ZF calling CQ on CW several times near 50.106 MHz. Coro says that the signal was good copy with no signs of echoes. Arnie responded but with only two watts and a dipole, no Q-S-O was made. Coro says that if he had been running at last 5 watts and a beam, that contact would have been made. (VHF Reflector)

**

THAT FINAL ITEM: AN EDITORIAL - WHERE HAVE ALL THE NOMINATIONS GONE?

And finally this week, an editorial word about the Amateur Radio Newsline Young Ham of the Year Award. Here is our producer Bill Pasternak, WA6ITF:

--
Im going to start this commentary with one word: Help!

Why help? Well its now the end of April. The nominating period for the 2002 Amateur Radio Newsline Young Ham of the Year Award has been open since February 1st. We have announced it at the end of every newscast for almost three months. Sadly, to date, we have not received what we consider to be a single viable nomination. Not one!

Normally by now we have received at least a dozen or more nominations. As this is written, all we have are the usual letters asking that we enter a youngster in a contest that some think the award to be. To paraphrase one: "Our 5 year old just got her ham license so send a free radio."

But that is it! And for the record; the Young Ham of the Year Award is not a contest. Rather its a way to honor the accomplishments of youth in ham radio. It has been that -- and only that -- since 1986.

The nominating period for this years award closes on May 30th. Just about 4 weeks from now. As it stands, there may be no Young Ham of the Year Award presented in 2002 unless we begin to receive valid nominations. And that is where you come in.

Do you know of a young ham -- age 18 or younger? One who has accomplished something really special using Amateur Radio? Well, what are you waiting for? Now is the time to nominate that person.

Does your radio club have a youngster who has been an outstanding member. Maybe one who does far more for the club that most of the grown-up hams? Again, what are you waiting for? This very moment is the time nominate that boy or girl.

How about that quiet young ham who is always willing to volunteer in public service events? You know; the one who does everything from organizing the

communications to keeping the club repeater operating. Ill say it once again: What are you waiting for? Nominate that person.

I think you get the idea.

OK. How do you file a nomination? Simple. You go to www.arnewsline.org, scroll down to Young Ham of the Year Award. Click on the rules. Read them. Click on the nominating form. Download it. Fill it out and mail it in or e-mail it to us. Its that easy.

We at the Amateur Radio Newsline™ believe that the future of our hobby, our service and our nation is in the hands of the young. It will be the next generation of young hams who will be the technologists, public service leaders and political leaders of this new millennium. The Young Ham of the Year Award is one way to guarantee that there will be this “next generation” of ham radio leaders. By taking the time to nominate a youngster for this award, you take one step to help insure the future of Amateur Radio.

Thank you. Roy.

--

If the award is made this year, the youngster selected will receive a trip to the Huntsville Hamfest and a ham radio gift courtesy of Vertex Standard. He or she will also be treated to a week at Spacecamp Huntsville thanks to the folks at C-Q magazine. (ARNewsline™)

1676. QSL Route for T30TM

Newsgroup: rec.radio.amateur.dx
Date: 2002-04-28 18:30:06 UTC
From: Peter Dougherty <ve3thx@canada.com>
Message-ID: <uifocucsap6l9dkjq86vog7s4rfl0h0q6o@4ax.com>
Source record: 13450

Hi folks,

I worked T30TM on 20 last night and can't find a route anywhere for
him (I've tried both QRZ and Buckmaster CDs and Web sites), ProLog
from last fall and various QSL reflectors with no success.

Any ideas??

73, Peter W2IRT

Just my $0.02

I sent a SAE and one GS on 1/17/02 and received a card back on
3/11/02. Despite sending the GS and SAE I received the card as a
postcard. Still usable (and has already received DXCC credit), but I
was a bit disappointed to have all the postal equipment smudges and
barcodes, etc, on the card.

Hello Peter,
According to the 23-April-2002 issue of the Daily DX the qsl mgr for
T30TM is VK8TM

Call Mgr
T30TM VK8TM

I also found this collaborating data through a spot database search here
http://oh2w.kolumbus.com/dxs/qin.html

That showed VK8TM several times as the qsl route...

I tend to agree. My belief is that if you live in one of the
speciliazed prefix areas then fine...but once you move and wish a
vanity call, you must get a regular series.

What's worse is that they opened KG4 as a regular-issue series. The
first time I ran across this on HF was just about the time Camp X-Ray
was opening in Gitmo, and it was all very much in the news. I heard
this awesome pileup and the poor bugger didn't know (at first) what
was going on and why everyone was calling him.

I was wondering if there was a website, or if anyone has any tips for making contacts on 6M. I only have FM TX capability, so I realize I probably won't hear much action compared to SSB, but I can monitor AM/SSB and CW.

Since this band is affected by weather patterns, I was wondering if there were tools to help me predict band openings. The only ones I have found were for Austrailia and the UK, and those were just maps (no interpretation of them re: openings).

I am in California in the SF Bay Area.

Thanks in advance!

Mark

Yes, Walt, you are right! Confusion all over the place!

I need Hawaii for WAS on 10m CW (49/50), and November 2001 brought me... AH6something! I was so delighted, finally! I told him he was a new DXCC for me &#65533;nd a new one for WAS. I asked his QTH, but he didn't come back. I asked it again, nothing but silence. I looked him up on QRZ.com, he's in Colorado... Exit new one, exit WAS on 10m CW...

Same thing in the ARRL DX CW contest: regulations for this contest clearly state that if you're NOT in the area (or DXCC for that matter) your number indicates, you should sign portable (eg. W2something in CA should sign W2something/W6). At the end of the contest I had a small run on 20m, and I clearly heard KH2D a couple of times, but I didn't log him as KH2 should not be worked in ARRL DX 'test, and my software didn't allow me to log him (not USA, not Canada). If I had known KH2D currently resides in FL, I could have logged him as KH2D/W4 (which was the contest call he should have used according to the regulations). I thought Jim was a "by the book" guy?

Oh well, one day I'll run across a real KH2 for a new one...

Where can I find a schematic for a noise canceller for HF? I would
like to homebrew a noise canceller/preamplifier that would be similar
to the MFJ-1026. (Unfortunately, the MFJ manuals available online
don't include the schematic.)

I would particularly appreciate an explanation on how the various
parts of the circuit work (noise amplifier, noise phase shifter,
signal preamplifier, filters, etc.) and the transformer specifications
I need (so that I can use something available to me).

This looks like a nice noise blanker circuit and I have saved it for future reference; however, it doesn't answer the original poster's question, "Where can I find a schematic for a noise canceler for HF." He's talking about the RF phase cancellation device like the MFJ 1026. I'd be interested too.

Hmm, 9A1ICD doesn't sound familiar at all. Perhaps you worked 9A1HCD, a Radio Club in Daruvar - they are very QRV on all bands. I can't find anything else similar to this call in my 9A (granted, it's old) callbook.

All 9A1 stations are club calls, btw. I tried the HRS (9A) website but it seems to be down at the moment: http://www.hamradio.hr/

>AH6something! I was so delighted, finally! I told him he was a new DXCC for
>me &#65533;nd a new one for WAS.....

That's a sad story, Franki. On both ends. But it is very typical in explaining what ham radio on the HF bands has become. A post card chase. Nothing more, nothing less.

Sad that you devalue him because he can't produce the needed post card. Sad that he figures he has to fool you into working him because nobody needs a post card from CO.

I remember the days when I started ham radio - I was THRILLED when ANYBODY answered my CQ - I could have given a damn less if he was in Pee Five or California. The contact was always fun to me - the post card never mattered. And to this day I'd still rather have an interesting QSO with a guy in California than I would a 59 from a Pee Five.

Anytime you hear me on, just ask where I am. I'll be glad to tell you. I don't collect post cards..... And I'm not hiding in Florida, look me up at QRZ.com and see if that (the FCC license database) says I'm in Guam. Some days I'm in Florida. Some days I'm in Hawaii. Some day I might even be in Guam again (but I hope not).....

>Same thing in the ARRL DX CW contest: regulations for this contest clearly

>
>Oh well, one day I'll run across a real KH2 for a new one...
>
>- Franki ON5ZO

Jim is a by the book guy, Franki. The FCC book. And no part of that book says I have to sign portable anything..

W4/KH2D/P format was invented in Europe, and thats where it should stay.....

Why do we now sign PORTABLE/CALL, i.e., KH0/W1xxx when
for years we always signed W1xxx/KH0 ? Who knows ? I have
a theory, but I don't know how many people will agree....

CQ CQ CQ DE W1xxx/KH2

vs.

CQ CQ CQ DE KH2/W1xxx

On the first CQ, all the post card chasers are gone after the
DE W1........

I didn't call you cuz I was hardcore contesting, I called you cuz I
thought maybe you were and you needed an extra Q for your log. You
could have worked me, then found out I was in Florida, and then
logged me as anything you wanted to that would make your logging
program happy. I didn't send in an ARRL DX contest log so I don't
need to worry about ARRL regulations. I was just spending a few
hours to increase OTHER people's fun, cuz after all the contests
I've been in I know how much fun it is to CQ for hours and have
very few people call.

Think about how much fun a contest would be if NOBODY called
you. Or if only the guys who were actually sending in contest logs
called you.

I was just working people to give them an extra point - something that
we do here in the U.S. cuz we are nice guys. Unlike EU, where
everybody is too busy chasing post cards to bother and spend
8 seconds to give somebody else working a contest 8 seconds
more fun. Lots of stateside stations called me this weekend in
the Florida QSO party and didn't even know what contest it
was - they asked me what I needed for an exchange. They did
is cuz they realize I'd probably have more fun working people
than CQing all weekend.......

I was absolutely amazed at the times I had to explain to
somebody in EU last weekend that the reason I was sending
them a FL county is because I was in Florida. And I was amazed
at how many times that got noted on the cluster, as if to say
"Don't call KH2D cuz you won't get a post card from Guam."

As I said before, I called you in ARRL DX test so you could have
8 seconds more fun - I thought WORKING people in a contest
was more fun than CQ'ing all weekend but maybe I'm wrong.
None of the other hundred guys I called refused to work me
cuz they didn't know where I was, they were all happy to get
another Q in the log. A few even said HI JIM TU.

The cluster chatter should have said "Call KH2D, he's in Florida
working the Florida QSO party, having fun. Someday he'll return
the favor by calling you in your contest". But it didn't...... No
post card, no call.......

I had the same problem with calls (other peoples, not mine) this weekend in the Florida QSO party. Bunch of guys running around Florida in mobiles signing CALL/COUNTY. Problem is one of the county abreviations for Florida is ALU. So when I logged W4xxx/ALU, the logging software gave me a mult for Alaska (KL7). So I had to log the guy with just his call.

Last year 108 logs were submitted for the Florida QSO party. But some people logged over a thousand Q's. So 90% of the people who were nice enuff to call them did it to help them out, and have fun in their contest.......

A long time ago, if W2UP moved from 2 land he was forced to get a new call in the district he was now in. We canceled that years ago. At one time, KH2, KH6, KL7, etc. calls were only issued to the area they were in. The we hosed that all up with the vanity program. Thumb thru an online log book sometime and look at KH2 and KH0 calls. Last time I worked up statistics, 75% of the people holding KH2 calls had never been anywhere near Guam. Same thing for KH7 calls.

So my advice would be this. If you hear somebody calling you, and you are logging via a computer, then work the guy and ASK him where he is. You never know. W1xxx might call you from KH2 someday. Nothing in the FCC rules says that he has to sign /KH2, or KH2/ - he can just use W1xxx if he choses to do so. Don't let the logging program be smarter than you are.........

And FYI, there's only ONE real KH2 left. So if you are gonna run across him, you'd best hurry up before he leaves like everybody else already did :-)

On Mon, 29 Apr 2002 21:56:32 GMT, w2Xup@mindspring.com (Barry) wrote:

>For example, yesterday I worked Jim Kehler, KH2D on 20m CW ... but he
>was operating from his new QTH in Florida! I have also worked KL7's
>in Pennsylvania and AH0's in NJ. What nonsense!

Depends on how you view nonsense. If the AHO in New Jersey lived
in Saipan for 16 years, and then moved to New Jersey, and would
like to keep the call he's had for years, seems reasonable to me, as
long as he files his change of address with the FCC. If the guy in
New Jersey got tired of his KB2 call and applied for an AH0 vanity
call and got it, I'd agree. That's nonsense. But it happens all the
time.......

Walter, I would like to say thanks to you for calling!!. Now don't
ruin that by telling me that the only reason you called was cuz you
needed a Guam Post Card..... If that's the only reason you called,
I'm ashamed of you. But I have a few thousand Guam Post Cards
left over and I'll be happy to send you a handful. Nobody will ever
know. Guam only counts for ONE click on DXCC, not ONE click
on DXCC like Pee Five does, so they never check KH2 cards....

GM3POI called me on 2 bands, and I called him on one, and
he's not complaining :-)

You are correct. The U.S. callsign system has gotten to the point
where it's impossible to tell where anybody is by the call. But like
Barry said, the rules are the rules. And those of us who have to
abide by them like them that way - I'm sure W2UP wouldn't like
to exchange his call for a KB3 call, and I have no intention of
trading mine in for a KB4 call either.....

Damn good thing they don't let KH2 call holders use them in the
country where they live, else you'd be working lots of KH2's in
Tokyo and a few more in Italy too :-) And I'm SURE you don't
know any G boys who have stateside souvenir calls either,
right ?

Hey Chuck...

I'l be very interested to know what type of response
you get from your proposal.

I have a complete 940 station just like yours, but
I think I'll keep it for now.

Do you think I could get an IC706 MKIIG in trade
for my TS-120S?

After all, its only 20 years old, and the scratches
are hardly visible. Works FB! I'm sure someone out
there will want to trade for that!

Wouldn't you?

But I like my callsign.
Have had it for almost 50 years.
Lived in W0 for quite a long time, but then moved to W1
for awhile, then W6, and now I'm in W7. Glad to tell you
all about my QTH whenever we QSO :-)

For the US calls, things are pretty simple.
I have the FCC database on this computer in the shack.
Pretty simple to key in a callsign and find out the current QTH.

Didn't work for K1B though :-)
Maybe the FCC will have it in next week's update.

Dear Old Man,

I have absolutely no desire to have another Guam postcard. Over the
past 42 years, I have collected more of them than I shall ever need!
(Including some from the days when they had KG6 calls.)

I called you in the FQP, knowing that you were in Florida, simply
because I thought it would be fun to participate in the QSO Party ...
and at the same time say "Hi" to an old friend. :-)

None of that negates my original statement ... that I think the FCC
rules about USA call areas, as they now stand, are very, very stupid!

73 and enjoy the Florida sunshine!

But that's *exactly* what they do, Jim! KH2 (Guam) is not part of the
United States of America. Florida is. Whe you moved from Guam to
the USA, you moved to a different country.

Guam is one of the US's colonies .... just like Puerto Rico, US Virgin
Islands, etc!

;-)

This is from Croatian callbook on the same site (it's working well, although
it is not updated since January 2002!!!):

9A1HCD

R.C. DARUVAR
Strossmayerova 32
43500 DARUVAR

Yes, there is no 9A1ICD listed in callbook... Maybe this can help you.

Gary, I really did not expect to much interest in the 940, but so many have purchased the 2000 and have had extreme difficulty with the programming of the rig that I thought I would give it a try. Response has been mediocre, but I am going to get the 2000 one way or the other, just hate to trade all this equipment in on a new one at R&L and see them make the profit.

Jason:

I recall, perhaps incorrectly, that you graduated from an engineering school last year or maybe this year. If that is so, you are sure not giving the school a very good reputation. In my senior year in Physics, we were expected to be able to do exactly what you are asking someone else to do, i. e. draw a block diagram of a system based on the intended application, describe the functionality of each block, and then design a circuit to fit in each block. That was 40 years ago, actually closer to 50. Have college standards dropped that much? All the old profs must be turning over in their graves. :-((

Now don't go Crazy, George,

Jason long ago 'fessed up he did good in getting high grades without
getting too deep into understanding the theory (certainly a talent).
Support his "born again" fervor now that he cares about how things
work. There are other, unrepentant sinners who thump their test
scores at the bewildered to prove their piety. ;-)

Yes, more than *60kHz* split is completely ridiculous, no matter how devastating the pile up is in CW.

DXCC #295 with 100w, a vertical and CW only with a path as hard as it can get for Central Europe. Yet. It would have been nice to work this one with a little more finesse than just park the TX somewhere on 21075 and call three times.

hey mark
you could make a fortune if you could make a software that would predict when 6 meters would open
6 meters isnt that predictable at all thats why it is called the magic band
what i would do is get a copy of DX monitor and set it up to monitor 6 meter activity then when you see a bunch of 6 landers working on SSB go and start calling on FM at 52.525 and have fun

Mark Lind wrote:

1734. Re: WANTED: schematic for HF noise canceller (like the MFJ-1026)

Newsgroup: rec.radio.amateur.dx
Date: 2002-05-02 06:36:39 UTC
From: Chuck Hutton <chutton1@qwest.net>
Message-ID: <i85A8.119$8r5.137384@news.uswest.net>
Source record: 13360
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

It's not really a "noise canceller" as it is what MW and SW DX'ers call a simple phasing box. It's job is to create two signals 180 degrees out of phase and sum them to produce a null. In other words, it cancels whatever arriving signal is made to be 180 degrees out of phase in the two antenna inputs. In the case of the MFJ, one input is supposed to be a short whip or similar whose job it is to pick up the local noise source while the other input is the main antenna. I don't know how they do the phase adjustment works (could be L-C, could be delay lines, could be a one of several other ways) but the fundamental idea is the same.

It is not considered a robust front end in the MW DX'ing community. Mixing products have been noted by a lot of people. If you want to roll your own, I'd look at other designs. Go to http://www.qsl.net/wa1ion/ and you'll find his web pages of presdelectors and phasing units. One of them will surely do the job for you.

Chuck

I have no need to kick you, I have other things to do that. I just phrased it incorrectly, should have been "Could it be because you MAYBE logged a wrong callsign?". Sorry if it made you feel uncomfortable but I didn't mean it that way.

It's absolutely scandalous. Yesterday, K1B were listening up "5 to 50
kHz" on 20m. This meant that anyone trying to have a normal QSO
anywhere between 14200 and 14245 was unceremoniously flattened.

It is antisocial in the extreme.

And that's SSB with roughly 2 kHz bandwidth per signal. What would you call
60 kHz split in *CW*? See my posting "Ridiculous" two days ago.

Your receiver or antenna must be defective, OM. The bands are far
from 'dead' here.

Earlier today there were two (2) signals on 10M.
One was K1B.

This evening 15 CW is perhaps 10% occupied, even though
conditions are good. 20M CW is about 25% occupied.

Receiver and antenna working fine, QTH is excellent.

We need more activity.

I think much of the hullabaloo surrounding K1B has now mercifully subsided. Got 'em last night (with 100W and a dipole at 35'--no, not a W9INN dipole!) on 20. They were split 14.195 and listening on 14.245. Got 'em again on 15 a few minutes ago, 21.295 and listening 5-10 up--a reasonable split--and with only a handful of takers.

The problem is, though, how do you operate from a rare entity like Baker or Ducie Islands when the entire known universe has descended upon your head, and everyone's pulling out all the stops to make their respective callsign heard above the rest. If you try and cram 100,000 hams into 10 or 15 kHz at the start of one of these exercises in blood-pressure augmentation, I don't think the DX station could even hear a call in all the din.

What's the solution? Beats the hell outta me, but maybe, if they need that much bandwidth at first, operate in the slightly-less-populated parts of the main HF bands. How many of us *regularly* operate or look for DX above 21.4 or 14.325 or 28.65? No the frequencies aren't deserted, but they're not exactly prime RF real-estate either. I can't tell you the last time I worked anybody other than another Yank above 21.4 or 14.325 (although I'm sure I'm going to hear a hundred others tell me how they worked Upper Slobovia on 14.347 who was lonely and calling CQ there one day).

Or how about if the DX transmits in the DX windows (below 14.150, 21.2, etc) and listens 5-15 kHz above the beginning of the US Extra frequencies and 5 - 15 kHz or 20 kHz of the US General frequencies?

Short of simply *not going* on DX peditions to the ultra-rare ones, I don't really see a way around big splits for the first week or so.

It's kinda sad, actually. I'm relatively new to DX, and with my pipsqueak signal I can't really shoot with the Big Game Hunters. So along comes TI9M & PW0T and the like. I yell till I'm hoarse to no avail. All the KaliforniaKillerwatts ï¿½ are killing themselves to be

first. Me First, Teacher...ME FIRST!!! ME ME MEE ME MEEEEEEE!

Eight days go by. Papa Whiskey Zero Tango. QRZ: Anyone, Anywhere. North America, South America, Carribean, South Pacific. QRZ, 5-up <insert sounds of crickets chirping>.

Heck, TI9M even asked me to spot him on the second-to-last night they were up--we even exchanged *real* signal reports!!

K1B is in an area I traditionally can never get a signal into without miracles happening in the ionosphere, so I never even bothered calling till I heard them last night sounding kinda lonely (May 3rd, 0630 UTC roughly). Bingo, first call!!

So what am I going on like this for? Maybe if the US and European paper-chasers started to develop a little patience and spread out the QSOs over the entire run of the DXpedition, maybe they wouldn't *need* 60 kHz all at first.

And no, I never got Ducie but they'll be back on one day. I'll get 'em eventually.

I've just recently become QRV after several years of hiatus. I've been thru two previous 'solar peaks' and would have to say that this one is really lacking in overall ham activity. I've been repairing/restoring a bunch of old rigs in recent years and quite honestly I thought ham radio was darn near dead.
That might be a good thing...I'm hearing some great stuff and working it easily without the QRM level that was so tough 11 or 22 years ago.
But when a VP6DI shows up, its clear that there's plenty of folks still out on the prowl.

You will find that these frequencies are used by many specialist nets,
e.g. Maritime Mobile, VHF/meteor scatter talkback, etc, which use that
part of the band because they want to be able to operate in "peace"!

I did manage to work Ducie, but have not even tried to call K1B yet.
The strongest I have heard them on any band is S3!

'Scuse me, Walt, but you would give the impression that your fave freqs
are forever ruined by an endless chain of dx-peditions.
The one thing that will MINIMIZE the pileups (and make the dx-peditions
beneficial to everyone interested) is to let them do the best they can
during their available time.
You'll still be around when they are gone.

The amount of bandwidth used by K1B has nothing to do with how many
people are calling them. It has to do with how many hat sizes bigger
the operators head is since he stepped off the boat.

Famous Rock Stars need lots of bandwidth. Good operators don't......

If "the best they can" involves monopolizing 110 kHz of the 21 MHz
band all Saturday afternoon, then it's time they went on a basic
training course on DX operating techniques.

I agree with your diagnosis, Jim. It has been a very disappointing sunspot maximum this time around. There is a theory that it's really a 22-year cycle, with a lesser peak half-way through. Maybe we have just seen one of the "lesser peaks"!

The best sunspot maximum I have experienced was the one of 1957/58. Nothing since has come even close.

One of the DXpedition speakers (I think it was N5KO from the recent VP8 operation) at Visalia talked about the fact that no one listens anymore and instead relies on spots.

This is partly responsible for the madhouse calling by the masses that requires the DX to "spread 'em out". He offered an example of his work-around.

DX: "Listening 14.200 to 14.205.....and 14.218"

The masses who don't listen see the spot "QSX 14.200 14.205" and start screaming 1 millisecond after the DX says QRZ.

N7WS, who doesn't use packet and actually listens, hears the DX say "14.218" and therefore calls on 14.218, gets the DX on the first call.

Or, the DX could use the technique reported by K5VT in his Ducie report, as tried by one of the "novice" DXers, "Please call one at a time."

**

Amateur Radio Newsline report number 1290 with a release date of Friday, May 3rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Mark Shuttleworth comes on the air from the I-S-S and South Africa cheers. This story is first on Amateur Radio Newsline report number 1290 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: SECOND SPACE VISITOR OPERATES HAM RADIO FROM THE ISS

South African amateur researcher Mark Shuttleworth has made his way to the International Space Station and to ham radio. Amateur Radio Newsline’s Roy Neal, K6DUE, has been following the mission and brings us up to date:

--

(STUDENTS CHEER)

MORE THAN 200 STUDENTS, IN SOUTH AFRICA, CHEERED THEIR NEW HERO, MARK SHUTTLEWORTH. THEY TALKED TO HIM VIA AMATEUR RADIO. NICE DX. ON THE FIRST CALL, THESE ARE STUDENTS IN CAPE TOWN, TALKING TO THE PASSENGER IN SPACE BY WAY OF HAM STATION VK5ZAI, IN AUSTRALIA.

(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)

MARK SHUTTLEWORTH HAS BECOME A HERO IN SOUTH AFRICA. TO QUOTE THE HEADLINES: “HE’S THE FIRST AFRICAN IN SPACE” AND HAM RADIO HAS ENHANCED THAT IMAGE.

USING ARISS -- THE AMATEUR RADIO ON THE INTERNATIONAL SPACE STATION -- WITH SPECIAL PERMISSION AND AN HONORARY LICENSE -- SHUTTLEWORTH LINED UP CONTACTS WITH HUNDREDS OF SCHOOL KIDS -- SCHOOL LEARNERS THEY'RE CALLED IN SOUTH AFRICA. HE ALSO MADE SOME GENERAL CONTACTS WITH HAM RADIO OPERATORS.

ON FOUR DIFFERENT DAYS, STUDENTS GATHERED AT FOUR SPECIAL SCHOOLS, STARTING WITH SHUTTLEWORTH'S ALMA MATER, BISHOPS IN CAPE TOWN. ALL TOLD, ABOUT A THOUSAND SOUTH AFRICAN STUDENT LEARNERS SHARED THE EXPERIENCE OF DIRECT CONTACT.

ON THE SECOND DAY SOME 300 STUDENTS GATHERED AT THE HAVENSIDE COMMUNITY CENTER IN DURBAN WERE TREATED TO SOME REAL TIME EXCITEMENT. SHUTTLEWORTH WAS NOT ON THE AIR AT THE APPOINTED HOUR! HE WAS BUSY COMPLETING A MEDICAL EXPERIMENT.

AN EMERGENCY TEAM WENT TO WORK. THEY CALLED RUSSIAN MISSION CONTROL, IN MOSCOW, NASA MISSION CONTROL IN HOUSTON, MARK SHUTTLEWORTH ABOARD THE SPACE STATION…AND THEY AWAKENED TONY HUTCHISON, VK5ZAI, IN AUSTRALIA BEFORE DAWN.

AT ONE POINT THE SOUTH AFRICAN COORDINATOR, RICHARD MILLS, WAS ON THREE PHONES AT THE SAME TIME. SOMEHOW IT WORKED AND LESS THAN HALF AN HOUR AFTER THE FIRST ATTEMPT THEY MADE CONTACT AND THE HAPPY STUDENTS CHATTED BRIEFLY WITH THEIR HERO IN SPACE.

ARISS PROVIDED TOP NOTCH GROUND STATIONS IN AUSTRALIA, SOUTH AFRICA AND THE UNITED STATES TO MAKE THE CONTACTS. ON THE AIR, MARK USED ONE OF THE ISS INTERNATIONAL CALLS, NA1SS. THE COMMUNICATIONS WERE FED AROUND THE WORLD AS A DONATION FROM WORLDCOM, THE INTERNATIONAL COMMUNICATIONS NETWORK.

MOST SOUTH AFRICAN RADIO AND TELEVISION STATIONS AND NETWORKS CARRIED THE REPORTS LIVE AND REPEATED THEM ON TAPE. NEWSPAPERS AND MAGAZINES GAVE THEM HEADLINES GALORE. IN THE UNITED STATES, CABLE NETWORK MSNBC CARRIED THE CONTACTS.

--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--

BEFORE TAKING OFF ON HIS SPACE FLIGHT, FOR WHICH HE PAID RUSSIA AN ESTIMATED $20 MILLION, SHUTTLEWORTH TOLD REPORTERS THAT HIS LIVE COMMUNICATION REPRESENTS A MAJOR TURNING POINT FOR THE IMAGE OF SOUTH AFRICAN EDUCATION. THEN MARK SHUTTLEWORTH ADDED "THIS PUTS A GROUP OF OUR SCHOOL LEARNERS UNIQUELY INTO THE GLOBAL SPOTLIGHT OF SPACE EXPLORATION."

AND THAT'S JUST WHAT HE DID, HOLDING CONVERSATIONS WITH STUDENTS WHO WON THE RIGHT TO ASK THEIR QUESTIONS IN A NATIONAL COMPETITION.
--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--
SPACE TRAVEL HAS BEEN A LIFELONG DREAM FOR MARK SHUTTLEWORTH. HE HAS SHARED IT WITH A VERY GRATEFUL SOUTH AFRICA AND IN THE PROCESS HAS GIVEN AMATEUR RADIO A MAGNIFICENT SHOWCASE TO THE WORLD.

FOR THE AMATEUR RADIO NEWSLINE, RN, K6DUE.

--

The crew's primary mission was to deliver a fresh Soyuz spacecraft to the I-S-S. This spacecraft remains available as an emergency escape lifeboat. (ARNewsline(tm))

**

HAM RADIO IN SPACE: SHUTTLEWORTH MAKES RANDOM CONTACTS

Mark Shuttlesworth was active on voice over North America from the International Space Station making random contacts. He used the standard space communications F-M channel pair 145.800 to transmit while listening on 144.490 MHz. One of those he spoke to was AMSAT North America's Frank Bauer, KA3HDO. Mark's audio was captured by Bruce Paige, KK5DO and posted to his website. Take a listen:

--
Shuttleworth: "Kilo-Alpha-3-Hotel-Delta-Oscar this is NA1SS. Do you copy us?"
(Response)
Shuttleworth: "Thaks very much for your help with the station on the ISS."
--

Shuttleworth was only been heard using NA1SS. That's a call assigned to the ISS. He's not used his honorary South African ZS-RSA callsign. According to Miles Mann, WF1F, Shuttleworth worked many stations as he flew across the United States. This included school amateur radio club KB3BRT in Knoxville Pennsylvania. More next week. (ARNewsline(tm) with audio provided by KK5DO)

**

HAM RADIO IN SPACE: SHUTTLEWORTHS SPECIAL CALL

Before his flight, Mark Shuttleworth was granted a temporary honorary ham radio call to operate from the International Space Station. And while everyone who is assigned to the ISS has some form of ham radio certification, the call, ZS RSA, is a one of a kind. Amateur Radio Newsline's Henry Feinberg, K2SSQ, tells us why:

--

According to Deon Erwin, ZR1DQ, space visitor Mark Shuttleworth received all the information in Russia's Star City, from the South African Radio League, to study for his ham radio license and he was trying to fit these studies into his busy training schedule. However, there was doubt whether Shuttleworth would actually have the time to complete his ham radio exam due to the eight months it took to learn Russian and simultaneously completing his astronaut training.

So the Oakdale Amateur Radio Club near Cape Town, South Africa, negotiated with the South African licensing authority to grant Shuttleworth an Amateur Radio license in light of the tight schedule before the launch and in anticipation of him writing the test. The authorities agreed and awarded the temporary, honorary and very unique callsign ZS RSA. ZS is the prefix for South Africa' and R S A represents the nations name -- the Republic of South Africa.

Shuttleworth’s callsign is only valid for three months. The licensing authorities did not assign a number to the callsign, as the numerals represent South Africa’s provinces and geographic locations. And in the South African licensing system no separate callsign allocation exists for space communications.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ

--

The Oakdale Amateur Radio Club is located in Durbanville, a village which is about 30 kilometers North East of Cape Town. Durbanville is Shuttleworth’s home town and where his family still lives. (ARNewsline with information from SAREX remailer)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the
Woodchuck Amateur Radio Club repeater serving Cleveland Ohio.

(5 sec pause here)

**
REPEATER LINKING: IRLP SURPASSES 400

Nate Duehr, WY0X, reports that the Internet Radio Linking Project or I-R-L-P has now exceeded 400 nodes. The latest list shows the number stands at 403 installed.

The Internet Radio Linking Project permits repeaters around the world to interconnect with one another using a Linux based computer and a simple computer to repeater interface. The system is secure against non hams penetrating it because of its propriority hardware and software made available only to licensed radio amateurs. In fact, it is the only Internet ham radio linking system permitted by the Australian government.

More information is on the world wide web at www.irlp.net. Be sure to look at http://status.irlp.net and http://maps.irlp.net to see if there is an I-R-L-P node near you (WY0X)

**

HAM RADIO IN SPACE: AMSAT-NA ANNOUNCES NEW SATELLITE PROJECT

AMSAT North America has started construction of a new low-earth-orbit communications satellite. According to the groups president Robin Haighton, VE3FRH, the satellite will be similar in size to the original AMSAT Microsat design, but will incorporate all new leading edge electronics and RF technology

The new satellite will be code named AMSAT OSCAR E or Echo until launch. It will contain both analog and digital VHF and UHF FM transponders similar to those carried on the UOSAT-OSCAR 14 and AMRAD-OSCAR 27 ham-sats that are

currently in orbit. In addition, the new satellite will have the capability to host one or two other experimental payloads.

Haighton discussed the new bird at the organization's Board of Directors meeting held in Washington, DC, on April 20th and 21st. The spacecraft is now slated to be ready for launch in late 2003. AMSAT says that a number of affordable launch opportunities are being actively explored. (ANS)

**

HAM RADIO IN SPACE: KOLIBRI 2000 TO DE-ORBIT

The Kolibri-2000 Russian and Australian School Scientific Research Microsatellite is headed toward a fiery grave. Kolibri-2000, later named RS-21 was launched on March 19th at 22:00 UTC from the International Space Station and has been in orbit for the past 6 weeks. During that time Kolibri's has been sending back telemetry and digital voice recordings.

The low cost RS-21 satellite was designed for this type of short duration mission. Part of its job included analyzing particles using a very sophisticated a flux-gate magnetometer and sending that data back to Earth. But all of this will soon end as Kolibri-2000 will reenter the Earths atmosphere and burn up sometime between May 3rd to the 4th UTC time.

Since the RS-21 has solar panels to recharge it batteries, it should be able to continue to transmit data until re-entry occurs. To hear its last transmissions, keep your radio set to the satellites primary downlink on 435.335 MHz and secondary downlink on 145.825 MHz. Both frequencies operate CW and FSK and you might want to keep a tape recorder running to catch a bit of ham radio space history as the mission of Kolibri-2000 comes to an end. (WF1F, ARNewsline(tm))

**

ENFORCEMENT: OWNERS OF BROOKLYN REPEATER DON’T RESPOND TO FCC

The owner operators of a repeater in the New York City area have not yet responded to a letter of inquiry from the FCC and the agency wants to know why. So it has once again written to one of the pair of hams to demand an answer. The person posing the questions is Special Counsel Riley Hollingsworth, K4ZDH:

--
Hollingsworth: “We warned Thomas Batista, an operator of the KC2DDD and the N2IFU repeater -- the repeater alternately known by both of those call signs -- in Corona New York -- that we had nor gotten a response from him to our letter of February 15th. That letter concerned interference and allegations of no coordination.”
--

In earlier letters to Batista and Gerardo Arias regarding the same repeater, the FCC asked for an explanation of why the system input is on 143.020 MHz. This is a frequency not allocated for use by hams. (FCC)

**

RADIO RULES: XM & SIRIUS CONCERNED ABOUT OUT-OF-BAND EMISSIONS

The nation's two satellite digital audio radio service providers, XM and Sirius, are concerned that out-of-band signals from a variety of wireless devices. The CGC Communicator reports that the two worry that these services will eventually cause widespread interference to their program services.

Singled out as potential culprits are license-free Part 15 and 18 devices such as ISM, Bluetooth, IEEE 802.11b, home RF wireless devices, RF lighting, ultra-wideband devices and even Family Radio Service transmitters. The fifth harmonics from Channels FRS channels 8 to 14 fall within XM's passband but not Sirius's. More information is found at the FCC website under ET Docket 01-278, RM-9375 and RM-10051. (CGC Communicator)

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Its time once again to hear from our support fund administrator. Here’s N6TCQ.

--

In the month of February we heard from The Montgomery ARC of Gaithersburg, MD; The Kanawha ARC of Charleston, WV; Michael Leahan, N9PQK of Sun Prairie, WI; Jay Underdown, W0PS of St. Charles, MO; The DuPage, IL ARC; Russell Lamb and the South Texas Amateur Repeater Society of Harlingen, TX, WH8H; The Steamboat Springs, CO Amateur Radio Association; regular contributor William Walters, WA2IBM of San Jose, CA.; The Kings ARC of Armona, CA; David Estrada, KD6HDX and the INLANDARS repeater system of Chino Hills, CA and the Xerox Amateur Radio Club in El Segundo, WD6CZH.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066. If you missed it, it will be given again at the end of this week's newscast.

I'm Andy Jarema, N6TCQ.

--

Also, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award closes May 30th. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org. (ARNewsline(tm) Support Fund)

**

EMERGING TECHNOLOGY: AUTOMATING NEWSLINE

Fred Vobbe of the National Radio Club D-X Audio Service says that he is now playing Amateur Radio Newsline automatically on his repeater. Fred says that he uses Echo Station software to automatically play this newscast every Saturday and Monday night at 7 P-M over his W8HDU repeater.

Fred’s machine operates 443.625 and is located in Allen County Ohio. More on Echo Station automation software is on the word wide web at www dot westmountainradio.com and click the link on the right side of the page that says Amateur Radio soundcard software presentation. (W8HDU)

**

EMERGING TECHNOLOGY: CALL 511 IN UTAH FOR TRAFFIC INFO

Travelers in Utah have a new way to get updates on traffic, and they can do it without having to watch television or listen to the radio. Instead, using a cellular phone, they can dial the nation's first voice-activated 511 travel service line.

Called Tellme, this is one of several free, voice-activated services known as voice portals.' Voice portals use speach recognition software to retrieve and translate information from the Internet. Taking their cues from spoken words, the services can dispense stock quotes, horoscopes, driving directions, sports scores and other widely sought information over any telephone.

Utah was one of six states selected to launch a 511 service after the Federal Communications Commission officially designated 511 as a nationwide number for travel information back in July 2000. Like the emergency number 911, the 511 systems are a public service and free. (Road Routes)

**

INTERNATIONAL: UK ANNOUNCES INTERMEDIATE LICENSE CLASS PLANS

The United Kingdom’s Radiocommunications Agency has announced details of the qualifications and examinations for the revised licensing structure for that nations Amateur Radio service.

A press release from the Radiocommunications Agency says that a new program of study for the U-K Intermediate license will be introduced early in 2003. This will be based on the current Novice syllabus but will exclude those topics covered in the Foundation License. The Radiocommunications Agency says that it plans to announce the course outline at least three months ahead of its introduction. It will be run initially as a pilot format similar to the Foundation pilot. Once the new syllabus is in force, a pass at Foundation level will be a pre-requisite to sitting the Intermediate Class U-K exam.

The new licensing structure was announced in September 2001. It’s first phase was the introduction of the Foundation License last January. This new ticket has been deemed to be a major success with over 1500 M 3 prefix Foundation Licenses having been issued. (RSGB)

**

DX

In D-X, what is believed to be the first 2-meter random meteor scatter contact has been made between Australia and New Zealand. Rex Moncur, VK7MO, in Hobart and Bob McQuarrie, ZL3TY, in Greymouth, on the west coast of the south island of New Zealand, made the contact on April 13th over a distance of 1950 kilometres using the W-S-J-T software. (Q-News, RSGB)

A bit lower in frequency, HC8N reports that the new QSL Route to him is Randy Becnel, W5UE, at Post Office Box 170, Kiln, MS 39556-0170 in the United States. Bechnel replaces Derek Wills AA5BT who is stepping down after 10 years of service and 50,000 QSL requests answered. (Various DX publications)

Also, Dennis Hanley, G3YVY, says that he has been informed that his callsign is being used on 20 meters. At present Dennis has no High Frequency equipment and says that has no immediate plans to become active on the H-F bands. (RSGB)

**

THAT FINAL ITEM: USA ARDF CHAMPIONSHIP WINNERS ANNOUNCED

And finally, who's the best in the country at finding hidden transmitters? Here's Newsline's Joe Moell, K0OV, with the results of a contest to find the answer, and an opportunity for your club to get in on the fun.

--

USA has just completed its second national championships of on-foot hidden transmitter hunting, also called radio-orienteering and ARDF. The event took place near Pine Mountain, Georgia, hosted by hams in the Georgia Orienteering club. Primary organizers were Laurie Searle KG4FDM and Sam Smith N4MAP. About two dozen of our country's best fox-finders went into the deep woods of Franklin D. Roosevelt State Park, trying to be first to find up to five transmitters and then navigate their way to the finish line. Their rewards: the possibility of a medal and a place on our country's team going to the ARDF World Championships in Slovakia this coming September.

The championships included two complete courses on consecutive days, the first on two meters and the second on 80 meters. Best performance overall was by Gyuri Nagi KF6YKN, who averaged 19 minutes per fox on two meters and an amazing 15 minutes per fox on 80 meters. Gyuri, whose other call is HA3PA, is a part-time US resident who learned the sport in his native Hungary. He competed in M21, the prime age division, requiring him to find five foxes on a six kilometer forest course. Gold medal winning hams in other age and gender divisions were Jerry Boyd WB8WFK, Valerie Meyer KG4QWE, John Munsey KB3GK, Debbie Pendley KD5LOK, Charlie Siler KO4NO, and Jack Stump KD5OEO.

Hidden transmitter hunting is a fast-growing activity in the USA, whether on foot like these championships, or in cars full of direction finding gear and computers. It's time for your club to give it a try. The perfect opportunity is coming May 11 and 12, which will be the fifth annual National Foxhunting Weekend, sponsored by CQ magazine. The May issue of CQ has all the details. On the Web, you can find lots of information on both the National Fox Hunting W and the just-completed national Championships at www.homingin.com. That's

homingin -- one word -- homingin.com

From southern California, where every weekend is a transmitter hunting weekend, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

The next stop for the winners? Hopefully Slovakia and the world championships this fall. (ARNewsline(tm). K0OV)

Could you post the frequencies / times of some of those nets?

I tune ALL of 10M fairly frequently, and even call CQ up in those
higher reaches (above 28.800) from time to time. Only during major
DX contests do I hear noticable activity. If it's there, it is of interest
to me for propagation monitoring. Yes, there IS the occasional FM
signal at 29.200 and above, but that is fairly rare.

Same situation here. Got back into the DXing game about March 1.
Last time I paid attention was in 1982. Worked my first DX in 1953.

Compared to the (for example) 1957-58 solar peak, things seem
real quiet now in terms of activity.

Things are different than they used to be, Hank. All the talkers are
gone. Nothing left on HF but the post card chasers. Unless K1B is
spotted on ten meters, nobody is gonna be there.

Here's an interesting observation. Last weekend I did the FL QSO
Party. CQ'd my guts out on ten meters, for a couple hours on and off,
and ONE guy called me ? Band dead ? I didn't think so. Then I
went back to 15/20 and started asking people I worked on those
bands to QSY to 10. Everybody that was willing to QSY I worked,
most of them S9 (on my lousy antenna). All over the U.S.

So the band was open. Just nobody was home..... No post cards
to chase.....

Quite a bit of AM activity between 28.9 and 29.1 -- but I've seen
all too many times when everyone's listening and no one's talking.
I can't count how may times I've tuned around in that segment and
heard zilch. Put out a CQ and had at least one station come back
after the first CQ.

This morning same way. Tuned between 28.9 and 29.0 for quite a
while and it seemed dead. After my first CQ, KH6D from HI
called me. Listen first; if it seems dead, squirt some RF into
the ether and see what comes out of the woodwork.

Source record: 13393

When VK1AA was at H40XX, I heard him send QSX xxx, where xxx was a few kHz down from his transmitting frequency. There was a big pileup at +5-15 kHz, but he came back to my first call from a transmission where he SAID he was listening. I listened a while longer and most times nobody was transmitting there, so he would go QRZ QSX xxx again. It pays to listen to what the DX is saying. Now that the secret is out, however....

Not to worry, Bob. The packeteers will continue to call on the last QSX posted. One can only hope that the actual listeners don't post any spots. I sure as hell don't.

Similar situation with the Indiana QSO party this weekend.
Found only a few of them on 10, a few more on 15.
Did not look for them on other bands :-)

Next weekend is the Oregon QSO party, so I'll have a chance to see
how things look from the "other end of the path" so as to speak.

That reminds me of the time several ago when I tuned across the whole
of ten meters and heard only one signal, from a fairly loud beacon on
Mauritius.

Had not considered calling CQ on AM! May try that.

Most evenings I do spend a bit of time around 28.010 after the band
appears to be dead, calling CQ in various directions. Every now and
then I'm surprised, like the 0600 - 0700 GMT opening over the
pole to Europe from here in the Pacific NW. Appeared to be caused
by auroral enhancement: one AU hop and then F2 into Europe.
Quite a few Europeans on air, perhaps two of us from North America.
Also find the occasional aurora enhanced opening along the west
edge of the auroral oval into Siberia as well. Can be very strong signals.

That's the thing I like about 10 ... you never know what kind of
strange propagation will occur. But you do have to make noise ...

You have nothing to worry about, Bob. 95% of the stations who are
calling cannot actually *hear* the DX, so they won't hear his
instructions!

Back this way, QSO party activity on 15 and 10 is pretty scarce. 20 and 40
are much more active - not that that probably does you a whole lot of good
in Oregon.

|Nah, that's just Real OLD DX'ers like you, Walter.....

I was at Visalia and from the looks of the grey hair or no hair at all, most DXers are old <g>. Unfortunately, I've become one of them.

Count me among the old DXers that don't use clusters. Found K1B on 40 SSB last night all by myself and actually "listened" to him say 7.171. Went to 7.171 and worked him on first call.

ILink is a voice over IP program. It allows you to chat with voice
over the internet, like IPhone, or Yahoo Messenger. The original
concept was to use radio links, but about 90% of the users seem
to be internet to internet with no radios involved.

The web site for the software is:

http://www.aacnet.net/

And if you want to interface a radio to the software, you need a
hardware board, here's one of the ones being sold:

http://www.ilinkboards.com/

The user software at one time was free, now the author requires you to
make a donation to get the newest version. An older version is still
available for free, that you can download.

A problem with the design of ILink is the fact that it runs thru an
internet 'server'. If the server is off, the entire system is off. And
the server (and all three backup servers) seem to be off quite a bit.

The other problem is that a lot of the users seem to have trouble
understanding the concept - it's kind of silly to talk to someone on
another computer with a VOIP program and ID with ham calls.
Kind of like DXing on the telephone.....

There is another similar system available called IRLP. It uses Linux
software and radio links - only links a radio to another radio, no
user to user chat features.

***Not true. If you look carefully at the list of Amateur Stations
checked into ILINK, which averages about 250, about half are radio
links and repeaters while the remaining half are hams sitting at their
computers. A small percentage use conference rooms which has a mixture
of both.

Many thanks to Bill, NG3K for dorwarding the following message from Pekka,
OH2YY:

Gentlemen,

I will be on a business trip in Sanaa, Yemen from the evening of May 7th till late night on May 11th, 2002. I did apply for permission to operate amateur radio during my visit and I have
received a written confirmation, dated on April 23rd, to import my radio equipment and to operate them during my visit. So far I have not been assigned a 7O-call sign and unless otherwise agreed after my arrival, I will be using a call sigh 7O/OH2YY.

I will carry a FT840 transceiver and a FinnFet 1001 amplifier. I will also
have a Cuscraft R5 vertical with me and once in Sanaa I try to organize either a dipole or a long wire for 40 and 80 meters.

I will be using the following frequencies: 3790, 7045, 14195, 18135, 21295,
24950, 28495 kHz. If the propagation allows, I will try to maximize the number of QSOs by staying on higher frequencies. I will operate SSB only.

My QTH in Sanaa will be a bit outside of the city in a residential district. It's a higher altitude location having a very nice and clear view
to the north over the valley of city of Sanaa. The QTH should be good for
QSOs to North America, Caribbean, Europe and most of
Asia, including Japan.

On Tuesday May 7th I will arrive in Sanaa so late that most likely I have
to wait till next morning to get the antennas installed. I will have business meetings on Wednesday and Saturday and I am not aware of the detailed schedule yet. On Thursday and Friday I should be able to operate
most of the day. Anyway, I will use all the available time for DXing.

The QSL address is my home address:
Pekka Ahlqvist, Vapaalanpolku 8B, 01650
Vantaa, Finland.

73 and looking forward to meet you in the pile-up.

1802. K1B on too late for East Coast

Newsgroup: rec.radio.amateur.dx
Date: 2002-05-07 05:38:10 UTC
From: thompson@mindspring.com
Message-ID: <ab7p25$9oh$1@slb6.atl.mindspring.net>
Source record: 13278

K1B is on too late for most of the east coast on 17 and 12 meters. I keep hearing the operators say
they will be up when it gets dark in KH1 but that is much too late for the East Coast. I saw a W1 post say that even on 12 CW (at 0200Z) that they were just ESP.

For SE USA the best time is 0030 to 0130Z on 12 SSB. On 17 SSB the best time is o100 to 0230Z.
At 0340Z they were 3/3 on 12 meters when worked here and 4/4 on peaks at 0450Z when worked on 17. On 17 they sounded like back scatter. I put them out on packet (DX summit) and several W4's called them but I think only one other made a qso. The others were called by K1B but where not heard.

This is why the are reported by W7's as begging....the ones on the East Coast have no opening as the band is closed by then. It is not because they have worked everyone on the East Coast on SSB!
Those who don't have to work can get then about 1500Z on 17 but that's 10AM here so most are then at work.

Hope this will be relayed to them so they can spend one or two nights working the East Coast on 17 and 12 SSB.

73 Dave K4JRB

Source record: 13279

Dave,

Unfortunately, they are pulling the plug by 1800z this morning. It would have been better to send this message to the pilot station, Nenad, VE3EXY, before last weekend.

Please keep in mind that the Baker Island DXpedition managed to fry 3 amps on the first day of operations. I agree that 12 meters has been lite hr on the East Coast, but at 0200z they have been loud on 15 & 10 mtrs SSB. At least one evening they seemed to be peaking on the East Coast on 12 after 0200z. As far as 17 mtrs...0200z is a great time for the East Coast to work KH1. They may have not had their amps on this band, but they were very workable.

Yes, I missed them on 12...I listened both on SSB & CW for several hours without them really coming above the noise. Maybe as a little gun, I ought to consider how I can improve my antennas.

Take care & 73,

Mark A. Behrens W4GP

I have yet to hear them on any band! I hear their pile-ups
constantly, but never them. 10m spots at 0300 UTC are not much use
here!

Oh well ... too late now. I am consoling myself by working VKs and
ZLs at 599 both ways this morning. ;-)

Yikes.

That explains why they were easy to work on 15m CW Sunday evening despite a near-ESP signal. (and despite the fact that *my* amp is fried too<g>!) They seemed much stronger on 10 - not sure whether that was better propagation or a decision to deploy a remaining amp to that band.

This, by the way, is another DX success hint: wait until the *end* of the expedition to try to work the really rare ones.

The masses seem to believe DXCC is a contest, not an award - seem to feel it's important to be the *first* to work the new one. They all slug it out for the first couple of days. By the time the expedition is about to close, all the big stations have worked it (at least on the traditional high bands) and the competition is much easier to deal with.

That reminds me of an old Brother Dave Gardner story.

Relatives tell a poor-ole Southern Boy he oughta move up North to find
work. "There's so much money up here it's falling off the trees" they
told him.
So he gets on a Greyhound and heads for New York.
When he steps off the bus he sees a $20 bill on the sidewalk. He sez:
"I'll pick you up tomorrow, I don't want to work on my first day in New
York."

Hi all,

I just passed the tests to become a General!! My ts-570DG radio should be here today and I was wondering if someone could tell me what bands are open right now. I have a 10 meter mobile rig I'm using right now and at least on my end when I get home from work everyday around 4:30pm - 5:00pm the band seems to be dead. Which bands are currently the most active?

Thanks
Matt

Hello Matt,
Fine business and congrats on passing the General. Welcome to the HF bands and almost daily worldwide communications. As to which bands are open this can change even throughout the course of a single day. One can simply "spin the knob" and get some idea how the bands are and in many ways that might be the best way since "you can't work'em if you can't hear'em!".
However there some great aids available to Hams these days that the old-timers had to do without and that is DX cluster information. Hams from all over the world post the DX stations they have heard and / or worked to the cluster thus enabling all the other cluster users to see which stations are active and from that a sense of the conditions can be deduced. For example if the cluster is full of 15m spots but no 10m spots the odds are good that 10m is not open.
Here is the direct link to The DX Page of my site that has tons of DX info including live DX cluster links so you can dive right in..

Hi Matt,

First off, congrats on the /AG!!! Welcome to HF--you'll have a blast.

As to which bands are open, it depends on the time of day, but generally the higher the frequency, the better they'll be during the day, and vice versa (lower frequencies are better at night). 20 always has something going for it around the clock. 15 is my favourite band, and here in New York it's good from after sunrise until about 11:00 pm if conditions are good. If they're very good, I've worked 15 well past midnight with success. You already know about 10, of course.

40 is good from later afternoon onwards, and 80/75 picks up around the same time. I don't have the WARC bands, so I can't say how they are specifically, but I suspect 18 is good most of the day and 12 is good when 10 is open. The MUF seems to be keeping around 22 or 23 MHz during the day these days, but occasionally it gets high enough to give 10 M a good kick.

Just as a quick reference, look for Asia around dusk on the higher bands, Eastern and Western Europe and Russia during the evenings on 20 and the VK/ZLs on 20 during the overnight hours.

Since you're posting this to a DX-newsgroup, I'll assume that your main interest (or one of them, at least) is DX. If this is the case, I'd also strongly suggest you now move towards your Extra. I say this because most (but certainly not all) of the good DX works on frequencies that are still off-limits to you...for example, the window on 20 is from roughly 14.180-14.200 and on 15 from 21.25-21.3.

On 20 and 15, you'll find the bigger DX-peditions using 14.195 and 21.95, both listening into the General portion of the band, so if you're lucky, you'll have a shot at the rare ones (hint: wait for the last few days of operation and you'll have a much better shot, unless you're running a big-assed amp/yagi!!). List for Island On The Air (IOTA) on 14.260 and QRP on 14.268.

As an added incentive to going for your Extra sooner rather than later, the exam is changing shortly (end of June, I believe). The new

exam will be tougher and from a larger question pool...so now's the time to hit those books again!

Of course, please be respectful of the DX you work them and listen to their instructions (especially when they're working split or taking calls 'by the numbers'). In any event, welcome once again to the ranks of HF. Enjoy yourself, have a lot of fun, get to know conditions (you'll pick it up in a few months of operating) and did I mention it before...HAVE FUN!

|Hi all,
|
|I just passed the tests to become a General!! My ts-570DG radio should be
|here today and I was wondering if someone could tell me what bands are open
|right now. I have a 10 meter mobile rig I'm using right now and at least on
|my end when I get home from work everyday around 4:30pm - 5:00pm the band
|seems to be dead. Which bands are currently the most active?

Congratulations, Matt!

Since you are posting to a DX group, I'll assume you are interested in working
DX and focus on that.

As a general rule (no pun intended) if you must concentrate your resources on
one or two bands for some reason (antenna space, operating time, etc.) then 20
meters is my choice of a "center frequency".

Advantages:
1) Sooner or later, if it's DX it will be on 20 meters.
2) Antennas are reasonably sized.
3) The band will more than likely be open when you are home from work.
4) QRN levels are lower than on the lower bands.
5) As the sunspots fade, the band will open more often than the higher freqs.

Disadvantages:
1) As a General licensee, you can't work the "DX part" of the band.
2) A lot of the competition is using higher power.
3) The band is crowded.
4) DX is easier to work on the higher bands, when they are open. (I hear good
things about 17 meters, but don't work it much)
5) As the sunspots fade, the band will be open less often than 30, 40 and 80.

Recommendations:
1) Become a good listener. You don't need a fancy antenna (or even a resonant
antenna) to listen. Listen to each of the bands to get a sense of how
propagation works, day-to-day and hour-to-hour.

2) Become a good listener. Listen for the many beacons (See:
http://www.keele.ac.uk/depts/por/28.htm
for a list) to get a further feel for how the propagation works. Be prepared
for a surprise at how often you hear beacons coming through on a "dead" band.

3) Avoid the crutch of the DXclusters. If you follow the two recommendations
above, you don't need them. An occasional look at an Internet cluster can give

a hint of what bands are open but the minute you begin to rely on them you will miss the DX you need because:

3a) By the time it is spotted, the competition has found it too

3b) Unless one of the spots is from a guy down the street, they don't apply to you

3c) Until you've worked them, they are all "new ones" and "G's, I's, F's, etc" don't get spotted much

4) Become a good listener. If you hear a DX station working a pileup, listen to how he's handling it. Follow his instructions. Some DX stations are masters at handling a crowd and you have a chance at getting his attention if you learn how he's doing it. Other's are terrible and you probably don't have a prayer. Look elsewhere. When everyone else is calling in the pileup, there is often other good DX going begging. Your job is to find them.

5) Keep studying. If you become a serious DXer, you need that Extra class.

6) Enjoy. This is supposed to be fun.

7) Be balanced. Family, friends, etc. are more important than working DX. I doubt anyone laying on his death bed will be saying, "If only I had worked P5...."

I heard and saw an interesting strategy a few nights ago. SV2ASP/A was working his list while someone repeatedly informed him he was a lid. This compassionate bit of information was also posted on the DX Monitor. What DX station could possibly resist working us all and would probably be anxious to send us all QSL cards without SASE's or IRC's after hearing how warmly we regard him.

This ranks right up there with whatever reprobate pirated the Vatican call sign a few weeks ago....

Ya know, I can tolerate the NetCops (SPLEET SPLEEEEEEEEEEEEET) and
the "What's-his-call"-ers to a limited degree, but some things just
defy belief or tolerance. I had the radio on and was tuned to the mess
on 14.195 last night for the 7O, and a French station and another whom
I could not hear were going at it tooth-and-nail on 195 right over the
top of the DX. I mean Racial/Ethnic slurs, anti-palestinian/arab
comments, etc. I finally had enough after about 2 minutes and shut the
radio off for the rest of the night.

>This ranks right up there with whatever reprobate pirated the Vatican call

It's truly amazing how many times a station will repeat their call without taking a breath...some of them gave their calls 20 or 30 times without a break! It's no surprise Apollo usually gives up and goes QRT after a period of this lunacy.

I have read all the info on the Solarcon Imax 2000 the 5/8 wave 11 meter antenna at http://www.qsl.net/kg6aoh/imax2000/ .
This is an excellent article and the author also 'breaks down' the Antron99. My question is I don't like loading coils or traps such as in the Imax 2000. I found the old 'starduster' now called the 'Skylab found at http://www.cte.it/cte_obj_e.pl?nome=SKYLAB&codice=T233&tipo=C and also at http://www.copper.com/cgi-bin/checkitout/checkitout.cgi?catalogSTORE:CKIE:prodS80-00002+ This quarter wave design is claimed to produce 7dB gain?! How can this be. Can ANY quarter wave antenna have gain. What would the TRUE gain for this antenna be? The center element is 1/4 wave for 27.195 MHz with three 1/4 wavelength radials drooping at slightly more than 45 degrees. If you add up all the element lengths they total 1 wavelength. Is this important? What if there were four 1/4 wave radials for the 'ground plane' would this be better? In fact I thought that a proper 'ground plane' or 'counterpoise' would need to be at least of one wavelength meaning 4 not 3 radials? Is this so? I am attracted to this antenna because of the lack of any 'lossy' matching networks like in the Imax 2000. At http://www.qsl.net/kg6aoh/imax2000/ the author states that the Imax has a true gain of 0.8dBd (2.9 dBi), and increasing to 1.1dBd (3.2 dBi) with a proper ground plane counterpoise system (which looks like the Skylab radials only there are 4 not 3 of them). Does the lack of any matching network make the Skylab antenna a better performer than the Imax 2000. What do you think?

dbi and dbd are two different things. dbd is referenced to a 1/2 wave dipole (0 dbd). dbi is referenced to an isotropic radiator (about 2.1 db higher then dbd) An isotropic radiator does not exist in the real world, only as a mathematical equation.

A 1/4 wave ground plane is a 0 dbd antenna. It is really a 1/2 wave dipole with one half attached to a ground plane and one half (1/4) attached to a radiating element. The use of the ground plane and radials at a 45 degree angle, allow the direct connection of coax, an UNBALANCED conductor. Dipoles are balanced and require twisted pair or some other kind of balanced conductor or a balun.

Stay away from the cheapo antennas. Buy a Maco V58 instead. CTE is Italian crap. My second choice would be the Imax 2000 with GP kit.

The reason for multiple elements on a ground plane is to provide a
very low point of impedance for the radiator to "push against".
Generally, the more elements in your ground plane the better. But at
some number it reaches a point of diminishing returns, and any more
than about 12 elements isn't going to do much at all for your antenna
except make it heavier.

>... I am attracted to this antenna because of the lack of
>any 'lossy' matching networks like in the Imax 2000.

Some matching networks have a small insertion loss, but that loss is
usually insignificant compared to the improved performance to be
gained by proper matching. But be careful, because some so-called
"matching networks" can be very lossy -- I have an old mobile CB
antenna on the shelf that has nothing more than a resistor for it's
"matching network".

JEEPMON,
The coils in both the A99 and the Imax aren't
'loading' coils, but are impedance matching coils.
There is some loss in them, but not really enough
to make ~any~ difference as far as someone listening
to you could ever tell.
The gain figures from the vast majority of antenna
manufacturers is pure 'BS', to put it mildly. They
never specify what they're comparing their antenna
to. To get a 7db gain from a 1/4 wave antenna, they
have to be comparing it to a beer can laying in the
yard. Most 'real world' 1/4 wave antennas have a
negative gain figure when compared to a 'standard'
antenna.
I'm not familiar with the 'Sky Lab', but if it's
a 1/4 wave as you say, then it has no gain compared to
the 'A99', or the Imax. The number of radials used
makes very little difference, they still take the
place of 'ground'. And the 'drooping' of the radials
constitutes a 'matching' system of sorts. [A groundplane
antenna just means that the antenna uses a 'groundplane'
(those 3, or 4, or 12 for that matter, 'spokes' radiating
from the feed point) for the other 'half' of the antenna.]
The gain figures quoted for the Imax are probably as
close to correct as you'll ever see. I'm not so sure about
the increase of gain with the use of a 'groundplane', but
I guess it's possible. If the 'Sky Lab' is a 1/4 wave, and
the Imax is a 5/8 wave antenna, then the 'Sky Lab' should
come out the looser by comparison.

WRONG! The reason is so that radiation is prevented,
because opposing fields are generated in the various
elements of the ground plane.

It looks like a sturdy, high-quality antenna.
As far as having 7 dB gain over any standard
reference antenna (dipole or isotropic) --
not a chance.

At best, you'll see around 2.1 dBi, 0dBd
gain, give or take a dB perhaps.

Sparky,
A 'loading' coil electrically lengthens an antenna.
A 'matching' coil does just that, matches the feedline
impedance to the antenna's input impedance. While they
can be combined into one coil, the two purposes are
still seperate. Actually, neither type coil introduces
much loss if they are 'done' correctly. That's the
problem, though, sometimes they aren't done correctly.

For a "ground plane" antenna -- that is, a vertical antenna with more-or-less horizontal radials that's mounted a wavelength or so above the ground or higher -- the point of diminishing returns with radials is two. There's no significant difference in performance or pattern between a ground plane with two radials and one with any larger number.

The number of radials does become important when the antenna is close to the ground, and very important when the radials are on or under the ground. But then it isn't usually called a "ground plane".

I really have to disagree with you there. If you have just two radials
on what is supposed to be a ground-plane vertical you are going to
have gobs of rf on the feedline. Been there done that.

>The number of radials does become important when the antenna is close to
>the ground, and very important when the radials are on or under the

The number of radials is important anytime an artifical groundplane is
used. A resonant counterpoise, i.e, the other half of a hertzian
dipole, is a different story....

The coax radiation (I assume that's what you meant) is prevented
because of the very low impedance at the axis of the radials, where
the radials connect with the coax shield. That's why a groundplane
vertical can be fed directly with unbalanced transmission lines. It's
an effect, not a cause.

Does a ground-mounted vertical 1/4-wave antenna have a gain of 3dB relative to a 1/2-wave dipole because the same power is concentrated into only a half-hemisphere ?

Assume a perfect ground.

The word, "antenna" is of Latin origin, and is the
yard-arm of a ship. Ships in Roman times were
not square-rigged, and the yard-arm stuck out,
rather like the yard of an Arab Dhow.

The word, "antenna" has been borrowed for things
which stick out, such as parts of an insect, and for
radio air transducers.

The Latin plural is "antennae".

Certain ignoramuses used "antennas" as the plural,
but it is incorrect. Some dictionaries now give "antennas"
as a valid plural, but this shows dictionaries to be
a record of contemporary usage, and not a record
of correctness.

No. What I was referring to is the synthesis of
the ground plane from which no radiation occurs.
In the transition from flat ground plane, via a cone, to
the single wire of a dipole, then an increasing degree
of radiation occurs.

A synthesized flat groundplane may be two elements
diametrically opposed, three elements at 120 degrees,
four at 90 degrees and so on. What is important is that
the local "near" fields effectively cancel out so that
no radiation occurs. (A similar effect to a capacity hat)

Radiation from a feeder is not "prevented" by a remote
termination. How would the energy in transit along the
feeder "know" that it mustn't radiate because of a distant
termination which it hasn't yet encountered?

Yes, a ground plane being an unbalanced antenna, can be fed
with unbalanced feeder.

Is there one?

The loading coil lengthens the antenna for the purpose of matching
the input impedance to the feedline impedance. What other reason
is there for using a loading coil?

Not true. If it was, you could add a loading coil to a 1/4 wave
vertical and get the radiation pattern of a 1/2 or 5/8 wave vertical.

What the loading coil does is to cancel the capacitive reactance of a
short antenna thereby making it resonant. The radiation pattern and
"electrical length" remain that of a short antenna.

Doc is correct, adding a loading coil does change the electrical
length. The radiation pattern will remain the same, that being
determined by its physical length

A loading coil can be used to make an antenna physically shorter. Ever
hear of "center-loading"?

Ok, but nobody was making the distinction as to whether the ground
plane was radiating or not. In fact, the original poster referred to a
sloping ground plane, which is going to radiate to some extent.

>Radiation from a feeder is not "prevented" by a remote
>termination. How would the energy in transit along the

Probably the same way it happens when the shield at the far end of a
coax is grounded to earth instead of an elevated, artificial ground.

Indeed. Like many other Latin words, however, "antenna" has been
used in English for long enough to be considered fully naturalised, and
subject therefore to the rules of English inflection, such as they are. Do
you insist on saying "fora", when "forums" is by far the more common
usage? And what is the English plural of "agenda", which is already
plural in Latin?

>Certain ignoramuses used "antennas" as the plural,
>but it is incorrect.

Only when speaking Latin. It has presumably escaped your notice that
"ignoramus" is a verb in Latin, not a noun. By your argument, it must
therefore be considered incorrect to use it as a noun in English.

>Some dictionaries now give "antennas"
>as a valid plural, but this shows dictionaries to be
>a record of contemporary usage, and not a record
>of correctness.

Which is exactly how it should be. What is correctness if not
educated contemporary usage? Who is the arbiter of correct
usage in the 21st century, anyway? Fowler? Onions? Dryden?
Radio Ham?

It would appear "Radio Ham" has got his "anus" well and truly in the
glue-pot, yet again.

Now trying to change the subject, he has clearly demonstrated he knows
sweet f*ck all about "antennas"

Once again he has proved himself a total embarrassment to his country,
by making himself a complete idiot in front of our American friends.

Until "Radio Ham" stared posting here, Her Majestys Government and the
citizens of the UK had a special relationship with the USA...not
anymore I fear :-(

Cue GED...to make matters worse!

Why only go back to the Latin? Don't have any truck with Americanisms. Call it aerial, which comes from the Greek "aerios", as Sir Oliver Lodge, F J Camm etc did.

Lionel Carter

Radio Ham has never defined exactly what period of spoken English he sees as being the correct one, presumably the one used in his Liberal Republic.

Hence he can always correct your English, but you can't correct his, because you don't know what it is!

And I bet we'll never find out, either.

I think you'll find that even 4 radials are nowhere near enough to prevent coupling from the vertical radiator to the feedline, and I doubt that 4 is significantly better than 2 in this regard. The best way I've found to decouple the feedline in a ground plane antenna is to use two current baluns, one at the feedpoint and one about a quarter wavelength below it. The AEA Isopole did a good job by using conical decoupling sleeves. But radials don't do much of a job of decoupling.

Like I said, check a reference on antenna theory.

Ground planes radiate. At they carry rf currents and are not
closely spaced conductors with equal but opposite current flows,
how can it be otherwise?

Reg,

A 1/4 wave vertical should have the same gain as a half-wave dipole.
(The "missing half" is virtual...) In reality, you'd have to have a
pretty good ground or a whole bunch of radials for that ground-mounted
1/4 wave vert to have the same performance as a good dipole hung relatively
high and clear.

Very 73,

Tom AB9B

A great deal of modern English (particularly American English) is a composite of other languages. Dictionaries always have been a record of contemporary usage. In addition to modern usage, dictionaries also often show from where the word was derived. This is the way a language evolves. When a derivation of a word comes into common enough usage to be recognized by the majority, it is then considered a legitimate word. Being as language has been evolving since the beginning of man, possibly before depending on your definition of language, at what point in time do you suggest as a standard for correctness?

Maybe this is just semantics, or maybe not.

To me, "electrical length" refers to the actual physical length of the antenna. I think you're using "electrical length" to mean a certain combination of R+/-jX. To me, that's just the impedance at the feed point and is not necessarily related to length.

By using various inductors and capacitors at different points in the antenna or at the base, you can have all kinds of different impedances at the feed point, but the "electrical length" of the antenna remains the same.

If this is just semantics I can live with that, as long as we agree that the far-field radiation pattern is determined by the physical length and not by any loading coils, capacitors or whatever. All they affect is impedance (and of course, efficiency).

This quarter wave design is claimed to produce 7dB gain?! How
>can this be. Can ANY quarter wave antenna have gain.

See whether they are claiming gain in dBi or dBd

dBi is the nonexistent isotropic antenna, mathematically a point source.
Damn near any antenna shows gain over this mythical antenna.

dBd is gain over a dipole. An unlikely antenna can also show dBd gain also,
depending on where you measure it. Even omnidirectional antennas like J-poles
show gain over a dipole at certain angles because they don't shoot much signal
into the air.

For a long time QST magazine didn't allow antenna advertisers to publish "gain"
figures. You pretty well have to look at the altitude and azimuth patterns for
each antenna to see where the claimed gain is coming from. The gain may be
real, but it may exist only at some pretty unlikely or unuseful angles.

Any antenna that doesn't have significant loss has gain over an isotropic antenna in some direction(s). The isotropic antenna has the lowest possible gain of any perfectly efficient antenna.

The problem with comparing antenna gain to a dipole is that you've got to make clear what dipole you're talking about. A dipole over ground has several dB gain over a dipole in free space (which, at 2.15 dBi gain, is generally regarded as having a gain of 0 "dBd"). So you have the interesting prospect of dipoles with several dBd gain. This is an even bigger boon to antenna manufacturers than dBi, and some of them routinely take advantage of it. And, as Reg rhetorically asked about, a vertical dipole or monopole over a perfect ground has a gain that's 3 dB greater than a free space dipole or, using the most common definition of "dBd", a gain of 3 dBd. The advantage to using dBi is that there's a single, universal definition. When gain is given in dBi, you can at least be sure of what's meant. When it's given in dBd, you never know for sure.

Ok, since everyone else has had a stab at this I'd like a turn.

It's my contention that the ground plane radials do in fact radiate.
To say otherwise is to also say only one half of a dipole radiates a signal.

The length of the radials is chosen to be a few percent longer than the frequency for which the main radiator is tuned. When you do this for a yagi, this element(s) becomes a reflector. It re-radiates an impinging signal. Even the driven element or in this case, the main radiator of a 1/4 wave, will re-radiate a portion of the rcvd signal.

The grnd plane radials on a 1/4wave antenna perform two functions. One is to complete the antenna when mounted above grnd. They provide the other half of the vertically mounted dipole. A second function is decoupling. The radials, when tuned, provide a lower impedance to the circulating rf current than the feedline extending from the antenna.

Although the radials afford some decoupling, the feedline may still have some rf flowing on the outside of the braid. How much is a subjective question because it has to do with layout, radial efficiency, total amount of radiated power etc etc. It's is not a bad idea to incorporate a choke in the line near the antenna.

There were some questions about loading coils and matching circuits.

Loading coils change the electrical length so that the current distribution will approach that of a physically longer antenna. Loading coils can be at the base or in the middle(typically) of an antenna. When such a coil is used at the base, it may be tapped in such a way as to afford an impedance match between the shortened antenna and the cable. If used near the center of the antenna, the length of the antenna above the coil is generally made adjustable to afford tuning.

First off the radials need to be sloped for matching the feedline. The
angle is around 45 degrees, but I found that can vary quite a bit.
Once the antenna is fairly well matched, then the ground radials need
to be cut for the band. I like to use several radials with slightly
different lengths (about 5% variation), because it tends to give a bit
wider response while still providing a good match. I have done this
for several commercial radio installs on HF and VHF, and it does keep
RF off the coax. I have never been able to get RF off the feedline
using less than four radials, but I use eight of them for most of my
intsalls.

Yes, and the rules of English are to use the Latin forms of plurals.
In the Oxford English Dictionary of c1960, "antennae" is given as the
plural both for the insect form, and for the radio form.

> Do
> you insist on saying "fora", when "forums" is by far the more common

Do I insist on high standards in education? Yes.

> And what is the English plural of "agenda", which is already
> plural in Latin?

It's not a Latin word. It's not listed in any of my Latin dictionaries,
and I have a number, both large and small, going back to c1850.

> >Certain ignoramuses used "antennas" as the plural,

> therefore be considered incorrect to use it as a noun in English.

No. That's not my argument. Straw Man! "Ignoramus" came in
from an old legal term where it's use was as the verb, 1st person plural,
present tense, indicative active.

> >Some dictionaries now give "antennas"

Not "educated" - it's an error introduced since 1960.
Perhaps by those who have lowered the standards
to that required for a CB/M3/FL licence?

> Who is the arbiter of correct

You are not using the accepted definition. Electrical length is what the
length appears to be to the RF. Physical length is the actual measured
length that you can get with a tape measure.

For example, the electrical length is coax is longer than the physical
length. If you cut a piece of coax to an electrical 1/4 wavelength, it
will be shorter than 1/4 physical wavelength.

Another way to look at this is to split the problem into two parts- power transfer tx to antenna and power transfer from the antenna to the propagation 'medium' (air or freespace normally).

Thus, the various matching components just ensure the tx 'sees' the optimal impedance so maximal power is transferred into the antenna- at the frequency in use. (Note: optimal and maximal , not ums- unless the match is perfect). Of course, any losses in the matching or loading components is RF not transferred to the antenna.

(If you could not see the antenna to measure it with a ruler then measurements at the feed point only would not allow you to distinguish between a correctly adjusted antenna and a dummy load- unless you varied the frequency- let alone determine if the antenna is 1m or 1000m long.)

Having got the RF into the antenna the next question is how well does it radiate? Then, as a quick guide, phyiscal size does come into play if you compare antennas of similar type.

In antennas with 'traps', the traps isolate parts of the antenna so they 'disappear' at the relevant frequency which simplifies the matching problem and thus limit losses in the matching network (the more L and C you need to

match the less RF gets to the antenna).

Also, a 1/4 wave is generally offered as an isotropic radiator and its gain is -2.14dB compared with a dipole. The figure of 3dB difference between a 1/4w and a dipole is a bit of 'license' to make antennas look better- hence dBi and dBd are often quoted to 'clarify' things.

This is not 1960 anymore. Nor does everyone use the OED - after all,
it misspells aluminum as well.

From my Webster's Third New International Dictionary (1966 ed):

3 pl usu antennas: a usu. metallic device (as a rod, wire, or arrangement
of wires) for radiating or receiving radio waves.

It also states that "antennas" is acceptable when referring to animal
antennae or the organs of certain invertebrates.

>
I see you are fishing again Reg!

A ground mounted 1/4 wave (assuming perfect ground) will
have gain over a horizontal dipole in free space (a theoretical
antenna), but not over a horizontal dipole mounted over perfect
ground, as the ground reflections cause the horizontal dipole
to concentrate it's power into a hemisphere as well. A vertical
dipole with the lower end just above perfect ground will have
(more or less) the same radiation pattern as a quarter wave
over perfect ground, a vertical dipole with it's lower end 1/4
wave above ground will have some gain over a 1/4 wave
vertical at the low angles of radiation (around 5-7 degrees).
Of course perfect ground does not exist, so the end result
may be somewhat different to the theory!
.

_____

I was speaking of antennas, not coax. As far as I know, antennas do not
have a velocity factor. There may be some arcane exception, but for the
HF/VHF antennas under discussion, I believe that statement holds.
Physical length is measured in feet or inches or whatever; electrical
length is measured in wavelengths or degrees. For a given frequency, if
you know one you can determine the other.

Hair splitters and nit pickers are welcome to fire away.

Language is a method of communication. Communication is the expression
and understanding of concepts and ideas. If the word "antennas" is
sufficient for everyone reading it to understand the meaning that was
intended by the person using it, and it certianly look like that's the
case, then it really doesn't matter if it's Latin, English, American,
Ebonics, Jive or Cajun. The only person with a problem with it is you,
but even you seem to have understood it's meaning just fine. So if all
you want to do is whine about grammar then take your cork over to the
appropriate newsgroup and do it there.

Sparky, looks like you have met the frustrated Latin scholars from the UK.
Good Luck.

My go-round was about the ending of sentences with prepositions but
plurals are fun as well.
As I believe Shaw said, "This is the sort of nonsense up with which I will
not put"

Amateur Radio Newsline™ Report 1291 - May 10th 2002

Amateur Radio Newsline™ report number 1291 with a release date of Friday, May 10th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Mark Shuttleworth returns to Earth after his ham radio odyssey in space. This story is first on Amateur Radio Newsline report number 1291 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: MARK SHUTTLEWORTH RETURNS TO EARTH

South African space explorer Mark Shuttleworth was greeted with Easter eggs and cake as he returned to earth on Sunday May 5th, This, after a ten day stay on the International Space Station that he called unforgettable. And ham radio operators around the world will remember his trip for a long time as well. Amateur Radio Newsline’s Roy Neal, K6DUE, has the wrap-up on Mark Shuttleworth’s ham radio space odyssey:

--

"Every second will be imprinted and will be with me for the rest of my life.”

Those were the words of a happy Mark Shuttleworth as he was carried away from the Russian Soyuz capsule that brought him and two fellow passengers back down to earth in Kazakhstan on Sunday, May 5th at 7:51 a.m. Moscow time. Before his return to Earth, Shuttleworth delighted hams around the world when he showed up on the air and made numerous random contacts. In short order he was working them like a D-Xpedition pro. Listen:

--
contact audio here
--

That recording was supplied by Stan Vandiver, W4SV. We compressed it to give you a glimpse of the way Mark Shuttleworth took to ham radio and the way that ham radio welcomed him.

One ham lucky enough to record both sides of his contact with Shuttleworth was Al Lark, KD4SFF. Using the Experimenters Group Amateur Radio Club callsign N4ISS mobile, Lark spoke with Shuttleworth on May 1st at 9:20 A-M Eastern Daylight Time:

--
Contact audio here
--

According to Lark, that contact was made from his work van during coffee break in downtown Greenville, South Carolina.

Mark Shuttleworth's operation from the International Space Station was made possible by ARISS. Amateur Radio on the International Space Station. Amateurs from nine countries, in the USA, Russia, Japan, Europe and Canada, have set up ARISS, to design, build, maintain and supervise all operations of the amateur radio station aboard the ISS,

For the Amateur Radio Newsline, Roy Neal, K6DUE.

--

Shuttleworth is the second person to pay Russia for a trip to the I-S-S. The first was U.S. businessman Dennis Tito, KG6FZX, who travelled to and operated from the space station a year ago. (ARNewsline™ with audio supplied by W4SV and KD4SFF)

**

HAM RADIO IN SPACE: THE OTHER HAM IN THE CREW

Almost lost in the shadow of Mark Shuttleworth is Italian Astronaut Roberto Vittori, IZ6ERU. Vittori was a member of the crew that brought a new Russian built Soyuz escape vehicle and explorer Mark Shuttleworth to the ISS. And while on board the space station, Vittori also took to the air in his native Italian using the ARISS station:

--
Vittori audio here
--

That recording was made by IT9GSV as Vittori was flying over Rome. Among the other contacts Vittori made was one with a school in the town of Malignani on May the third. (Tnx: IT9GSV, IK1SLD via SAREX Remailer)

**

HAM RADIO IN SPACE: TEEN IDOL MAY BE NEXT SPACE TOURIST

The next space tourist to visit the International Space Station could be a teen heart-throb. Lance Bass, one-fifth the teen pop group *NSYNC, says that he has passed his first battery of tests in his effort to fly into space on a Russian spacecraft later this year.

In a recent television interview, Bass said he is attempting to keep time free during the bands current tour so he can participate in additional medical tests

in the U.S.. If they go well, Bass says that he will be heading back to Russia to see if he can qualify for a fall mission to the ISS.

Bass was in Russia last March to undergo an initial series of physical tests. The 22-year-old pop singer's is attempting to qualify for a seat on the Russian mission that's set to launch on October 22nd and return to earth on November 1st. If Bass is approved to fly, it is not known if he would have time to study for a United States Amateur Radio license or if he would be interested in using the ham gear on board the ISS.

By the way, the same news report says that Bass' trip to the Star City Cosmonaut Training Center was paid for in part by Radio Shack. Last year Radio Shack filmed a television commercial aboard the international space station. (Published news reports)

RESCUE RADIO: AMATEURS MUSTER FOR WEATHER EMERGENCIES

The ARRL Letter says that Amateur Radio Emergency Service teams activated or stood by to assist as severe weather struck several states in late April. The National Weather Service said storms over the weekend of the 27th and 28th left pockets of devastation from Kentucky to Maryland. Amateur Radio Newsline's David Black, KB4KCH, picks up the story from here:

--
La Plata, Maryland was hit hard April 28th when an F5 tornado roared through the town's business district. This time, the agencies that normally help during disasters were themselves hit. The local American Red Cross chapter office and a building housing the Charles County Emergency Operations Center were damaged.

Tom Abernethy, W3TOM is ARRL's Maryland Section Manager. He says Michelle Sack, N3YRZ, who was on duty at the LaPlata hospital broke into a SKYWARN net to report a tornado. Sack reported a the massive storm was only one-half mile away to the west and heading directly for her location.

Sack tracked and described the tornado until it struck and then continued to provide on-the-scene assessments. Other amateurs along the storm's track also provided reports on severity and damage.

Mike Tackish, KA3GRW is the county's ARES Emergency Coordinator and RACES officer. He activated the local ARES and RACES team's emergency operations. Hams set up a command and control net on UHF, and used VHF channels to supply

communications for the hospital which lost telephone service and internal communications. Hams also helped the Red Cross with communications.

Hams were also busy helping the National Weather Service as the agency conducted a follow-up investigation of the tornado which had winds of around 260 miles an hour.

Also on the same date, hams in Kentucky were busy when severe weather struck that state. Radio amateurs used a wide area repeater net to relay important information to help the Weather Service and the Meade County Emergency Management Agency.

Weather service forecasters wound up issuing a Tornado Warning based on reports from radio amateurs. One person died, with homes in the Irvington area being damaged or destroyed. Nearly a dozen hams assisted with communications.

In Erie, Pennsylvania, hams were providing communications for a March of Dimes 9-mile walk April 28th, when severe weather prompted them to activate a Skywarn Net. Buildings were damaged at Erie International Airport--trees and power lines were knocked down, but no injuries were reported.

For the Amateur Radio Nrewsline, I’m David Black, KB4KCH.

--

Thats not the end of it. On April 24th, tornadoes struck Butler, Carter and Madison counties in south-eastern Missouri. More than 100 homes were damaged or destroyed. ARRL Missouri Section Emergency Coordinator Patrick Boyle, K0JPB, said ARES teams and individual amateurs remained on standby to assist if needed during the recovery effort. (ARRL Letter)

**

RESCUE RADIO: HAMS ASSIST IN NEW MEXICO FIRE COMMS

Amateur radio played a significant communications role in fighting the New Mexico wildfires. According to Jay Miller, WA5WHN, both Otero and Lincoln Counties were affected. Albuquerque was linked to Benson Ridge neat Alamogordo via the W5BI remote base with support from stations in Roswell and Ruidoso. This in support of the Red Cross and other agencies. Also, the 146.74 and 145.23 MHz repeaters plus 3.939 MHz Lower Sideband were in use.

The Red Cross had set up a shelter in the city of Cloudcroft. During the blaze several hams were forced to out of the area because they were in the path of the fire. They were located in a recreational vehicle in a near-by campground. (WA5WHN, ARNewsline™)

**

RESCUE RADIO: PHONES FAIL IN UK AND HAMS CALLED OUT

The United States is not the only place where radio amateurs have been busy. Ham radio operators who belong to the emergency service group Raynet were also called up after the telephone system failed in one area of the United Kingdom. Jeramy Boot, G4NJH, in Nottingham has more.

--

A major failure of the telephone system in south-west Hampshire and part of Wiltshire occurred during the evening of the 25th of April. At 2030, Bob, G4VWP, received a call from the Duty Emergency Planning Officer for Hampshire, requesting that Raynet be put on standby, ready for callout should the need arise. Later another call was received asking that, if required, Raynet should set up a VHF communications link between the police Command and Control Center at Netley and police HQ in Winchester.

Thirty-four members from four groups indicated that they were available for callout. The Forward Control Land Rover and 60-foot mobile tower were collected from storage and a portable mast, radio, power supply and associated equipment were made ready to take to the police headquarters.

The callout was led by Clive McCloud, G4EFB, Roger Davies, G8SXC, John Witts, G6BBW, Ian Duffy, G7GMN, and Dave Minett, G6DJA.

Jeramy Boot, G4NJH in Nottingham.
--

Eventually it was found that ham radio assistance would not be needed. Raynet members were dismissed at 23:10 UTC. (GB2RS)

**

ENFORCEMENT: FCC DOWNGRADES SIX TECHS

The FCC has notified six Technician class hams that they have been downgraded to no-code Technician status. This, as a result of an audit of a May 2000 ARRL V-E-C administered exam session in Statesboro Georgia. The FCC’s Riley Hollingsworth says that the problem was not the applicants but rather the test itself:

--
Hollingsworth: “We found that in that session the code exam had also been used in teaching the classes and in the practice exam. The same code exam -- that is. We called in eight for a code retest. Two appeared and passed but six did not show up.”
--

Hollingsworth said that the variances in the exam procedures were not the fault of any of the upgrade applicants and in no way reflect on them. However, they must first pass a valid Morse test before they can be granted the privileges of a Technician class license holder who has passed the code. (FCC, RAIN)

**

RADIO RULES: FCC CONSIDERS NEW SATELLITE INTERNET ACCESS SERVICE

The FCC says that it will consider rules for a new service capable of providing broadband Internet access via satellite. According to the CGC Communicator the FCC Commissioners will consider issuing a Report and Order and Further Notice of Proposed Rulemaking to implement sharing among multiple licensees in a new service capable of providing broadband access to the Internet using

non-geostationary satellites operating in the KU band. (CGC Communicator)

**

RADIO LAW: CALIFORNIA LAWMAKER SEEKS CELL PHONE BAN

A California lawmaker believes that two cellular telephone related car accidents may bring attention to his efforts to ban drivers use of cellular telephones and other hand held communications devices. Assemblyman Joe Simitian says it is time to ban these apparatus in the name of public safety.

New York State already has made it illegal to use a cellular telephone while driving unless it is attached to a hands free device. Other states are considering similar legislation. In California the idea has been defeated every time it has been brought to a vote, but Simitian believes that the recent series of accidents will bring a vote in favor of his proposed across the board ban. (Published news reports)

**

HAMVENTION 2002: APRS TAKES CENTER STAGE

APRS will be a feature at the upcoming Dayton Hamvention. Jack Parker, W8ISH, of Amateur News Weekly has the story.

**

AWARDS: MC GAN NOMINATIONS DUE MAY 24

The ARRL says that nominations close May 24th for the Philip J. McGan Memorial Silver Antenna Award. The annual award honors an amateur who demonstrates outstanding public relations success at the local, state or national level on behalf of Amateur Radio, and who best exemplifies the volunteer spirit of the award's namesake.

The award is named for the late journalist Philip J. McGan, WA2MBQ, the first chairman of the ARRL's Public Relations Committee and an enthusiastic Amateur Radio booster. To obtain an entry form for the Philip J. McGan Silver Antenna Award, contact Jennifer Hagy, N1TDY by e-mail to jhagy@arrl.org (ARRL)

**

HAM RADIO IN SPACE: KOLIBRI 2000 TO DE-ORBIT FOLO

Last week we reported that the Kolibri-2000 Russian and Australian School Scientific Research Microsatellite was slated to deorbit sometime between May 3rd to the 4th U-T-C time. WE also suggested that you might want to have a tape recorder on the satellites primary or secondary downlink channels.

Well if you did, and if you caught the last transmissions from the Kolibri we could like to get a copy and so would Miles Mann, WF1F, of MAREX. You can contact Miles for shipping instructions by e-mail to wf1f@attbi.com. Amateur Radio Newsline can be reached at the address you hear at the end of this weeks report. (WF1F, ARNewsline™)

**

HAM RADIO IN SPACE: AMSAT-NA SPACE SYMPOSIUM

The 20th Space Symposium and AMSAT North America Annual Meeting is scheduled for November 7th to the 11th in
Fort Worth, Texas. The meeting will chronicle recent and future Amateur Radio satellite technology developments and including an Electronic Surplus Stores tour on November 7th. Also slated is a Field Operations breakfast, a tour of the Lockheed Martin Aerospace Company and the all important actual AMSAT North America Board of Directors Meeting November 10th The 2002 event chairman is Keith Pugh, W5IU. (ANS)

**

INTERNATIONAL-UK: NEARLY 2300 FOUNDATION LICENSES ISSUED

According to the latest statistics from the United Kingdoms Radiocommunications Agency, as of the 18th of April, some 2283 of that nations Foundation Licences had been issued. This figure is made up of 1582 Full and Intermediate Class B’s taking the Morse Assessment and 701 individuals taking the Foundation Course.

Of those 701 completely new entrants to amateur radio, 226 - or 32 per cent - are under the age of 21. After only three-and-a-half months, these figures are being seen as a great success and thanks are due to the many radio clubs and individuals who are giving their time in order to provide Foundation Courses and Morse Assessments. (GB2RS)

**

DX

In D-X, word that Arliss Thompson, W7XU, and a few of his ham radio friends will be operating a 6 meter station from St. Paul Island in grid square FN97 from 29 June to 8 July. Thompson says that the group plant itself on 50.157

MHz and remain there for the duration of the DXpedition. Both CW and SSB operations will take place on that frequency although they may run split if they get a very good opening. The station will have a breakable beacon also on 50.157 MHz that will be running during slow times. QSL to W7XU. (W7XU)

Edisher Giorgadze, P5/4L4FN, has returned to North Korea. During a stop-over in Beijing, Edisher collected an Ameritron AL80A amplifier that was donated by Martti Laine, OH2BH, Bernie McClenny, W3UR and Al Baker, W5IZ. In his first contact using the increased power he contacted K4SSU who told him he was S-5 barefoot at 100 watts but an amazing 10 db over s 9 with the AL80A in line. He days that this basically guarantees more QSO's from the skylines of Pyongyang. Especially since he has extended his contract and will be in North Korea through June of 2003. Also, now that his operation is fully accredited by the ARRL a full-color QSLs has been released by his QSL manager, Bruce Paige, KK5DO. (KK5DO)

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

And finally this week, we hear once again to hear from our support fund administrator. Here's Andy Jarema, N6TCQ.

--

Yes, this is Andy Jarema, N6TCQ, Chief Financial Officer of the not-for-profit organization you know as the Amateur Radio Newsline. And once again, I am using the single word -- HELP! If you value this service, please help.

Let me start by saying that we really appreciate the individuals who give of themselves, but we don't hear from enough clubs. There are literally thousands, perhaps tens of thousands of traditional radio clubs and repeater clubs out there. These are the wonderful folks who re-transmit our broadcasts, bringing your nets increased value, and giving your members the latest in Amateur Radio news and information to enhance their hobby.

But Amateur Radio Newsline cannot continue without the funding needed to pay the monthly bills. And right now, we can't.

In the quarter century that it has existed, no one at the Amateur Radio Newsline has ever taken a salary. We all volunteer our time and talents. But we ARE faced with are monthly expenses for gathering and delivering the news to YOU! We are talking telephone, Internet access and the like. This hasn't changed.

We are also talking about the money we spend each year to help insure the future of Amateur Radio through the Young Ham of the Year award program. Yes, Vertex Standard, C-Q, Dave Bell Associates and Rosewood cover the expenses and gifts for the recipient. They do not cover the administration expenses. That's out part and it ran close to $1200 last year.

The bottom line is this. I am asking that you try to find it within your organization to continue this service. As we have said before, whether Amateur Radio Newsline continues to provide this service or if it disappears is totally

your decision. We are here to serve you for as long as you want us. You response the next several weeks will provide the answer.

The address for the Amateur Radio Newsline, Post Office Box 660937, Arcadia California, 91066.

Looking forward to hearing from you really soon, I’m Andy Jarema, N6TCQ.

--

Also, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award closes May 30th. Less than three weeks from now. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org. (ARNewsline™)

Again, you are wrong. The diameter of the conductor affects the length
of the resonant element. There is also an end effect. Both make the
electrical length longer than the physical length.

The formulas in the RAH even consider this. For example, look at the
formula for a 1/2 wave wire dipole. It is not a physical half wave
in length.

>Bill, W7TI

Hi Bill,

It is not nit picking to point out that electrical length and physical
length are different for a very good reason.

Further, this is not something confined to transmission lines, it is
common to all stimulated conductors and varies only in relation to the
construction of that same conductor (used for any purpose or simply
caught in the crossfire). Velocity factor is a derivation of the
older science of Optics and relates to the characteristic called
refractive index (and explicitly shown in Maxwell's equations which
occupy the studies of Optics equally with RF).

This is experienced every day by observing a glass of water and the
change of the speed of light translated into a delay that is perceived
as a distortion of a faithful scene migrating through it and by it at
the same time. The effect varies only by the degree of the index of
refraction (or velocity factor) which by definition exists everywhere

as being different from that of a vacuum (air being nearly equal to it, but even then the slight difference creates common examples of perceived distortion).

Without such differences observed, no beam forming antennas (lenses) would operate nor would we observe ionospheric phenomenon of skip (reflection and diffraction - again heavily vested with Optics).

Hi CW,

You have exposed the commonplace mis-reading of language by those who
lean on the OED.

The Oxford English Dictionary explicitly employs a form of definition
BY APPLICATION across time, in time order. As such, it implicitly
allows that English is not a fixed and immutable protocol and
acknowledges that meanings change by the nature of usage. Further, it
provides examples by time as used at that time - not through the
standard American style of prescription or proscription.

Ironic that our correspondent leans upon the American method of
definition to advance the notion English is not American (a long lost
battle since early last century). My condolences to the aggrieved.

And that is 0db. A 1/4 wave ground plane is a 1/2 wave dipole
with the lower half replaced with a ground plane.

For mast mounted preamplifiers in the 144, 432, 1240 bands consider ICOM AG series and SSB Electronics SP series preamplifiers. The ICOM preamps are controlled from 12 volt bias on the feedline. The SSB preamps can be powered the same way or will accept external power. In that case they are switched with built in VOX. If you are looking for low noise preamplifiers in general try Advanced Receiver Research, Downeast Microwave and Hamtronics. There are a few more vendors and some offer DIY kits. You really have to research the pros and cons based on your application.

Landwehr make some excellent 2 & 70 preamps if you can find a stockist for
this German product. Although now out of production a UK company called
MUTEK also made some fantastic preamps for 2 & 70 which had an RF
performance that others struggled to match. I would recommend any MUTEK
products without reservation if you can source them secondhand.

Would the people participating in this thread at least consider
confining the long-winded OT flame fests about Latin and dictionaries to
one newsgroup?

A thread about 1/4 wave length antennas over 100 responses is a bit much
though the norm for rec.radio.amateur.antenna but you all really look
like a bunch of goof balls when drifting OT for all the groups listed.

Thanks in advance.

_____

Did I ever say the electrical length and the physical length were the
same? I said you could convert one to the other, but that doesn't make
them identical quantities. One is measured in linear dimensions and the
other in wavelengths or degrees. Obviously there has to be a conversion
factor to go from one to the other, and, properly done, that takes in
account end effect and diameter.

Contentious little fella, aren't ya? :-)

Dang! We almost agreed, right up to that statement above. What kind of antennas are you talking about that act like lenses? Lenses operate by refraction, but the antennas I'm familiar with act by vector summing of all the points of radiation and re-radiation. No refraction involved.

Perhaps you meant "mirrors" instead of "lenses"? That might partially qualify a yagi, but collinear type arrays don't fit either category, and they are certainly "beam forming antennas".

Please explain.

Yeah, exactly. See what I wrote. Gain is gain "compared to what?"

You need to know how the comparison is being made.

But then I said that already.

Jeez, whenever I post a similar question about things maybe being posted to the
wrong group, I get a response like "Who died and made you king?"

Actually, I have been wondering about a VHF/UHF preamp, but I'm capable of going
to the RIGHT group to read it. SO I wholeheartedly support your question.

Without a rule or two, Usenet would be total anarchy.

Oh, it is? That's cause AOL hooked up to the internet I think.
AOL was better when they sent you free diskettes. I haven't bought a 3.5"
floppy since.

Hi Bill,

The passive elements of the beam can also be described as artificial
dielectrics (without disturbing their electrical effect one iota).
That this may seem odd is only evidence of the lack of exposure to
commonplace designs in the EHF where they abound.

Being dielectric, they exhibit the qualities of a slightly different
dielectric constant to the air buffer between the elements and thus
they impose a refractive bend to the emerging spherical wave front
from the radiator source. It is the dielectric constant that creates
the velocity factor (or actually conforms to it in the context of
Optics). This analogy is supported by both a mechanistic description
of lens and the more common expression of delay which are identical.

As you seem comfortable with a mirror (and indeed it is explicit
within the standard usage of reflector) you need only consider the
additional complexity of a curved mirror which is the analog of a
reflecting lens.

I don't think so. Dielectrics are a completely different thing from
conductors and behave in completely different ways. I think this
conversation is over.

Bush the elder would have had a phrase for this: Voodoo physics.

I'm just questioning why the thread is going to five groups. There is
another thread going on 150 posts that does not belong in this group
with the same five groups. RRS is already pretty active and including
threads from a group like rec.radio.amateur.antenna where threads run a
few hundred posts is just going to cause problems.

I case you have not paid attention groups that are very active have
shorter retention so including posts by cross posting from another group
causes posts to this group to expire faster. Posts I want to read. If I
want to read 150 posts on the oil used in dummy loads I will go read
rec.radio.amateur.antenna.

Hi Bill,

Everything I've offered is realized in both theory and practice.

A faint reference may be found in Johnson and Jasik to the point:
"Data on long Yagi-Udas indicate that, for lambda/lamdaz near 1,
loss in artificial dielectrics is likewise negligible, provided
all joints are firmly press-fit [into a surface wave antenna -
rwc] or soldered and the metal is of high conductivity."

Bailey in "TV and other Receiving Antennas" on ppg. 552 - 553 presents
both a dielectric and an artificial dielectric antenna.

Ramo in "Fields and Waves in Communication Electronics," Sec. 12.17
"Lenses for Directing Radiation" offers the explanation and the HF
example for the Luneberg Lens with the explicit usage of Artificial
Dielectric Lens.

Where can I find the 'Mutek' modifications for my Yaesu 736r and what are
they?
Where can I send this radio to get it 'tuned-up' and do all the necessary
modifications to make it a better rig?
What are the best modifications this radio needs?
What about filters and accessories?

OK, let's consider. You have proceeded to
discuss the matter of Latin discussion yourself.

One law for you and another for the rest?

This is not unlike the hypocritical and mass infantility
shown by the USA about Sept 11th. On Sept 9th, the
USA launched an unprovoked attack on Iraq, and used
flying projectiles to bring down a building and crush to
death and burn to death the occupants of that building.
In the light of that, the whole reaction of the USA to
the same thing being done to them two days later was
hypocritical and infantile.

What's sauce for the goose is sauce for the gander.

If I've read that last piece correctly, it describes the
losses imposed by a poorly manufactured connection after it

corrodes.

We cannot join it. In Region 1, the 40m band is only 7000 - 7100 kHz.

Ummm I wouldn't be so quick to dismiss the concept.

This concept is more usefully applied to the EHF regions
which he mentioned.

You may remember that some time ago, there were these funny
looking lens things that showed up on electronics stores
shelves. They promised better range for your radar detectors
if placed over the antenna ports. These were actually optic
devices which by virtue of dielectrics and optics would
accept microwave energy and collimate (spelling?) it. The
same principle applied to eyeglass lens's for people in near
proximity to radar guns. If the lens was of the right
material and thickness, it could collimate the radar signal
and focus it into the eye.

Some people will refer to a 1/4 ground-plane vertical as a 1/2 wave
vertical dipole if the ground radials are more vertical than
horizontal, as is the case with the Skylab. It's just semantics.

Yes. So if the antenna is physically shorter, why do you need the loading
coil? To match it to the feedline impedance.

I see where you're coming from. But their velocity factor is
essentially 1 if the conductor is thin, which is the same as no velocity
factor at all. If the antenna is thick, the added capacitance lowers
the resonant frequency and could be thought of as lowering the velocity
factor I suppose. I should have been more specific and I'll concede
that point.

Keep in mind this thread began because someone wondered how a 1/4 wl
ground plane could have 7db "gain". My intent was to point out that no
matter what you do to this type of antenna in terms of loading coils,
the radiation pattern and therefore the gain is fixed by the length.
You can not make a 1/4 wl antenna have more gain by making it
"electrically longer" with loading coils.

Hi OM,

No, quite the opposite. The conducting elements are artificial
dielectrics.

The application of a dielectric in a lens (fully aside from preventing
current flow between conductors and such) lies in the ability of a
dielectric to bend the ray of radiation through its property of a
dielectric constant. As this characteristic is also related to
velocity constant, it is with the retardation of wave propagation and
its combination with geometries that form a lens (or prism) effect.

Conductors, too, present identical properties through their tuning and
presenting a delay to the wave propagation that is identical both in
application AND in theory to the Optics as both sciences' effects are
described by the same Maxwell's equations.

This is far easier visualized in the EHF because wavelength scales
allow for the geometric forms to be realized in what we would consider
to be familiar shapes of lenses and prisms.

The reason to call them artificial dielectrics is that they are
conductors, true, which necessarily removes them from the
classification of a true dielectric, but the application of dielectric
constant is found in the assemblage of many off-tuned re-radiators

presenting their mass to a wavefront and causing it to diffract in a manner consistent with their being a true dielectric there. In the HF scales you need a truly large system to approach the same recognizable form and this is nearly observed in the Luneburg Lens antenna. At lesser scales this requires a forced perspective and some find it too shocking to accept the comparison.

Consider, with an example of a lossless, true dielectric and a lossless true conductor found isolated in space and illuminated (yes another optical term employed in RF studies) by an electromagnetic wave; both will cause a delay of its propagation consistent with the notion of either dielectric constant OR velocity factor OR phase combination - they are all the same, not merely similar but identical.

I don't think so. Dielectrics are a completely different
thing from conductors and behave in completely different
ways. I
think this conversation is over.

Bush the elder would have had a phrase for this: Voodoo
physics.
73, Bill W7TI

_____
Hi Bill,

Everything I've offered is realized in both theory and
practice.

A faint reference may be found in Johnson and Jasik to
the point:
"Data on long Yagi-Udas indicate that, for lambda/lamdaz
near 1, loss in artificial dielectrics is likewise
negligible,
provided all joints are firmly press-fit [into a surface
wave
antenna - rwc] or soldered and the metal is of high
conductivity."

73's
Richard Clark, KB7QHC_____

If I've read that last piece correctly, it describes the
losses imposed by a poorly manufactured connection after it

corrodes.
BobC_____

> Hi OM,
>
> As I said, a faint reference, but I fail to see how you
come up with
> this generalization?
>
> 73's
> Richard Clark, KB7QHC_____

It seems the paragraph is mostly interested in making sure the various joints of the antenna are making a good electrical connection more than anything else. I assumed the author was alluding to the dielectrics of whatever oxidation may occur in a poorly fitted or non-soldered/welded metallic connection.

Sorry, you are wrong, its clear that you really don't understand
antenna theory. The electrical length changes with addition of
inductors and capacitors. Doc is still correct with his post.

Not quite. If the antenna is too short electrically, then the loading coil
increases the electrical length enough so that it is resonant at the desired
frequency.

Getting a feedpoint impedance that is closer to that of the feedline may
be a secondary design consideration.

A base loading coil may be intended to perform both functions.

I see and understand your point. Although I'm not involved with research or design I still read my issues of Microwaves & Rf, Microwave Digest and RF Design magazines. In these I have read, albeit only partially understood, the concept you've presented. I guess if I were to bone up on my math skills I would be better able to follow through the formulae and more fully understand the authors presentation.
But...I'm old and lazy now. I'll stick to Pease' Porridge.

No my friend, it is you who are wrong. If electrical length could be changed by adding coils or capacitors, the far-field radiation pattern would also be changed. It is not. The only changes are the R+/-jX value seen at the feedpoint, the current distribution along the antenna and the near-field pattern.

Download EZNEC and play with it. Take an antenna, observe the far-field pattern and then insert various loads into it. You will see the pattern is unchanged because the electrical length is unchanged. Now remove the loads and change the actual length of the antenna. Notice that now the far-field pattern does in fact change.

Perhaps you are confused because you think that if, for example, you can take a 1/4 wl vertical ground plane and by adding various coils and/or capacitors, you can make it have the same feedpoint impedance as a 5/8 wl antenna and therefore the same gain. The same feedpoint impedance, yes, the same gain, no. A little time spent with EZNEC should make a believer out of even you.

I would like to agree that including a coil or cap will change the electrical length of an antenna.

An example of this is a trap dipole. I made a trap dipole out of an 80m dipole.

When I got thru installing the traps the overall length for 80m was considerably shorter than I started with. In fact, the length for 40 was also considerably shorter than a single band dipole. I would consider this as a change in electrical length.

Is it not fair to say that moving the current distribution around is the same as changing the electrical length.

Naturally I wouldnt suggest that you could turn a 1/4 wave ground plane into a 5/8 wave groundplane by adding a coil or cap.

The third sentence not necessarily true.

Did anyone say that such would be the case?

Again, your definition of "electrical length" is apparently different
than the one used in antenna theory.

Bill,
Now I can see your problem. Pull your head out
of EZNEC! It's only an aid to understanding what's
happening, and if you don't understand the non-vertual
reality of it, you 'got problems'. The other problem
is that you've got things 'ass-backwards'. There are
a number of ways to describe an antenna. Two of them
are by it's physical length, and it's electrical length.
An antenna's physical length can be measured by using
a tape measure. An antenna's electrical length can be
measured by using it's relation to a wave length at the
frequency it is designed, or used at. Makes sense to
me, I don't know why it doesn't to you. And if that
doesn't at least put a glimmer of light at the end of
the tunnel, I give up. Ignorance is curable. Stupid
is for ever....

The ground plane radials do indeed radiate. Their combined radiation produces exactly the same effect as the missing other half of the dipole would do, i.e. they produce an inverted virtual image of the quarter wave. All this assumes ideal materials.

However your analogy to a Yagi-Udo antenna with a reflector is wrong. The Yagi already has a full size 1/2 wave dipole. The reflector deliberately distorts its radiation pattern to produce positive gain in the forward direction and negative gain in the rearward.

For any perfectly efficient antenna the mean gain must be 0 dBi, i.e. no antenna can generate power - no free lunches. Gain, whether measured in dBi or dBd is a very crude measure of the distortion in the radiated field produced by the particular pattern of radiating elements. It only has any real value if the direction of the gain is also specified. Polar diagrams are much more informative allowing one to determine whether the gain will be useful in the particular application intended.

All real antennas have a velocity factor as they have both inductance
and capacitance. Not to mention the fact that the propagation velocity
of a voltage or current wave in a real conductor is always less than 'c'.
Even air has a velocity factor. You calculation as given above will
always overestimate the electrical length by a small amount. A good first
approximation but incorrect.

Couldn't agree more, but I can't figure out which one you are just yet.
Every post I've made in this thread has stated or implied that
electrical length is related to but not the same as physical length, and
that you can not change the electrical length by adding loading coils or
capacitors. That's a simple, straightforward statement and I stand by
it. If you think it is incorrect, please explain if you can.

No it won't. It will change the impedance at the feedpoint, the current distribution and the near-field pattern. But the far-field pattern, which is determined by the electrical length, will be unchanged. An antenna which is 1/4 wl will radiate like a 1/4 wl no matter what you do to it in terms of loading coils or capacitors. This holds true for all wl, not just 1/4.

That is correct, you did change both the physical length and the electrical length. You started with a 1/2 wave 80m dipole and by adding traps and reducing the length you now have a dipole which is resonant on 40 and 80 meters, and which is 1/2 wl on 40 and something less than 1/2 wl on 80, due to the loading effect of the traps. Do not confuse resonance with wavelength. It is possible to take an antenna of ANY length and make it resonant by adding the proper coil or capacitor. That DOES NOT, however change it's electrical length. If you start with a 1/2 wl antenna which is resonant and add loading coils or capacitors to it, you will end up with a 1/2 wl antenna which is no longer resonant, but IS STILL 1/2 wl. Some people have a hard time grasping this concept for some reason. To me, it's quite straightforward.

>Is it not fair to say that moving the current distribution

Moving the current distribution around does not change the electrical length. Whether that is "fair" or not, I can't say.

You are right and I stand corrected. I should have said that the
velocity factor on a relatively thin antenna (uninsulated wire) is so
small as to be safely ignored. Small but not zero.

End effect is a different matter however, and can not be ignored. To
the best of my understanding, end effect does not affect the velocity of
propagation down the wire and therefore does not change the VF of an
antenna. It does lower the resonant frequency just as VF does, but the
cause is different even though the effect is the same.

No one actually stated that, you assumed that someone had made that statement. You just have your terms backwards. Electrical length can and is changed by coils or capacitors. The patterns are determined by its physical length. Why is this so hard for you to understand?

No, you will see the pattern is unchanged because the physical length
is unchanged. You even proved what everyone has been telling you by
your statement " Now remove the loads and change the actual length
of the antenna. Notice that now the far-field pattern does in fact
change."

I don't think that you take a 1/4 wl antenna, add coils and make it have the same gain as a 5/8. I never made any such statement. Sounds like your the one that needs a little time playing with EZNEC,and some real time actually playing with antennas. Do you know what the feedpoint impedance of 5/8 antenna is? What would you add to it to bring the feedpoint impedance to 50 ohms, a coil or capacitor?

How and why is the field pattern changed by changing the electrical
length? To be more specific, take a dipole and add loading coils to
each leg, but keep the same physical length and freq. Disregarding
matching, efficiency, etc, how does the radiation pattern change?

Well here is one to try;

end feed a 1m long whip at 433MHz, and try the same with a
coil at the centre of about 125nH.

If the coil did not change the far field pattern then co-linear
antennas wouldn't have gain and a reasonable pattern.

The coil provides the phase shift to get both parts of the
antenna to be in phase and provide gain at zero elevation.
Without the phase shift the pattern is much different.

Bill,
Very simply, you are using the terms 'physical'
length and 'electrical' length of an antenna with
reversed meanings. I can change the electrical
length of an antenna by adding a coil or capacitor
to it, and keep it's physical length exactly the
same. And, that coil or capacitor has nothing to do
with matching feed point impedances. Nothing new
with that, it's been done for years If it isn't
apparent in your EZNEC, then you are using the program
incorrectly, or, without sufficient understanding.
There is your explanation. As to which catagory I,
or you fall into, make up your own mind. I have.

_____

It's hard for me to understand because it's not logical. If something looks like a duck, walks like a duck and quacks like a duck, it's probably a duck. If something looks like a 1/4 wl vertical, radiates like a 1/4 wl vertical and has the physical length of a 1/4 wl vertical, it's probably a 1/4 wl vertical. Something which is shorter or longer, has a different radiation pattern and doesn't look like a 1/4 wave vertical probably isn't a 1/4 wave vertical, despite what may have been done to it with loading coils or capacitors.

Beyond that, I have run out of arguments, at least for now.

_____

The answer will be a bit long, so bear with me.

The radiation pattern is the vector sum of radiation from all points along the antenna. Think of the antenna as broken into hundreds or thousands of individual segments, all with their own unique current and phase angle with respect to the other segments. Each segment radiates a unique wave, and the waves from all the segments combine to produce a single wave front at a sufficiently far distance. This is known as the far-field pattern. Don't confuse this with the near-field pattern, which is what you would measure if you were close to some segments but far from others - in other words, right next to the antenna.

If you insert a loading coil or capacitor but leave the physical length of the antenna unchanged, you will change the current distribution along the antenna, its impedance at the feedpoint and its near-field pattern. Oddly enough, the far-field pattern will NOT be changed, because the new changes in one segment are compensated for in others.

The only was to change the far-field pattern is to physically lengthen or shorten the antenna. This changes the relationship between segments in a way that loading coils or capacitors do not. I confess the mathematics of this is beyond me, but the antenna analysis programs such as EZNEC handle the calculations easily.

Download a copy of EZNEC from www.eznec.com and play with it. Set up an antenna and note the far field. Add loading coils and/or capacitors and you will see the far field unchanged. Change the length however, and you will see the far field does change.

To summarize: An antenna which has a certain electrical or physical length will always have the same far-field pattern for a specific frequency. Adding coils and/or capacitors will not change that pattern, but changing the length will.

I think that should be clear, but if not we can carry on. :-)

Clear enough. So let's start with an unloaded antenna, a 1/4 wave vertical for instance. Let's say that it's 102" at 27 MHz. Then we shorten it to, say, 66" and add a loading coil somewhere, anywhere, go get it back to resonance at 27MHz. Now since we have not changed the frequency, and since it has the same electrical length then the far-field pattern will not change. But we also changed it's physical length, so the far-field pattern DOES change. So which is correct? Does it change or doesn't it?

Ok, I will concede that example does change the far field pattern. I have not worked with antennas that long because I am an HF guy only and I will stand corrected there. One meter at 433 MHz is about 1.44 wl and that is outside my experience.

On the shorter ones normally used at HF, especially where someone wants to make a 1/4 wl into a 5/8 wl, I stand by my previous statements. That was where this thread originated and that was what I was focussing on.

Your example was an eye-opener and I thank you for it.

Changing the electrical length from 1/4 to 5/8 WILL not change its
far field pattern. What is your problem that you can't understand
what electrical length is? Run your EZNEC with a 1/4 wave, add a coil
and see if your far field changes. IT does NOT. If you aren't
capable of modeling an antenna, I will be happy to send a run to you
with instructions on how to use EZNEC.

Hi Bill:

Actually, you can change the "electrical length" of an antenna by adding loading coils or capacitors. The electrical length of the antenna is defined by more than its radiation pattern characteristics. For most relatively short antennas, their electrical length is defined more by their impedance characteristics than their pattern shape. For example, consider 0.2 WL monopole, which has an impedance of approximately 22 - j77 ohms. We can add a coil somewhere near the base of the antenna to bring its feed point impedance to resonance and in this manner will have changed the effective electrical length of the antenna. The radiation patterns of the antenna will not appreciably change because the pattern characteristics of relatively short antennas are primarily determined by their physical height.

As the length of the antenna becomes longer with respect to the wavelength, adding coils will significantly change the pattern shape of the antenna. Add a loading coil to a 7/8 WL antenna in EZNEC and see what happens to the pattern.

In the dipole example given, you have changed the radiation pattern in the far field.

By adding a loading coil to each leg you have now changed the electrical length because the current distribution has changed.

You effectively shortened the necessary length of the antenna for a given proper current distribution. The amount of physical antenna length remaining outside the electrical length now enters into the equation.

Now you have a length of wire dangling off the ends that, depending on the length, begins to contribute its own radiation which combines in either a positive or negative phase depending on which lobe you're looking at. The

radiation pattern is changed.

This might sound too simplistic for some antenna guru's which I am not, so please bear with:

Review of the basics: A 1/2 wave dipole has high current and low potential in the center, and low current and high potential on the ends. The center provides the "magnetic" component of the EM wave and the ends provide the "static" component. The interaction between these two components is what makes an EM wave.

Now, if you physically shorten a 1/2 wave dipole with loading coils, while still maintaining an electrical 1/2 wavelength, then it's still a 1/2 wave dipole: It still has low-impedance at the center and high-impedance on the ends. Therefore it's still going to make EM waves in the same manner as a "full-length" dipole. And it follows that if everything else is the same then the radiation pattern will be the same also. And it is -- a single lobe. The only difference is that the lobe is smaller because the shortened antenna is less efficient.

When electrical length is unchanged, physical length affects the radiation pattern only in magnitude, and then only because physical length affects radiation efficiency.

And a bit further:

The radiation pattern off the side of a 1/2 wave dipole is, as we all know, a single lobe. The pattern is symmetrical because the antenna is symmetrical. A lobe from a vertical isn't symmetrical because of the ground, so for the sake of discussion we'll assume free space.

Now, if we take that 1/2 wave dipole and make it electrically longer than a 1/2 wave for the same frequency, the excess antenna length introduces radiation in addition to that from the 1/2 wave section, and this additional radiation is partly in the same space as the original lobe. This causes wave interference, and that wave interference is what defines the new pattern of the lobe.

If the radiation from the excess antenna is greater than, equal to, or nearly equal to, that of the 1/2 wave section, then the interference becomes significant enough for the lobe to differentiate into multiple lobes. And that's exactly what happens. But don't forget that this is caused by "wave interference": i.e, the original single lobe is still there, it's just being propogated in the same space as another lobe. They are in-phase at some points and out-of-phase at other points, creating sharper lobes and nulls.

Ok, I went a bit too far, but I hope everyone gets the idea.

correct?
> Does it change or doesn't it?

I think it changes. Perhaps not in a major way but enough to
be noticed.

I would start by suggesting that shortening the physical
length, despite adding a coil to bring the current back into
the proper phase, changes the characteristics of the
wavefront. I'm not sure how I should illustrate this.

It seems to me that the larger antenna presents a larger
wavefront for a given antenna current. In reverse, the
larger antenna "cuts" more of the incoming wavefront
allowing more voltage to be developed at the rcvr terminals.

In this light I would say the far fields are different
between the two antennas.

I believe there is a scientific theory and formula for this
but I can't remember it.

I'm not satisfied with the way I presented this and await a
reply which might get me to thinking about a different way
to illustrate my thought here.

I should have qualified this statement as a broad statement.

What I should have said was adding the coil will change the
electrical length if you don't change the physical length to
offset the added electrical length.

By adding a coil to a unloaded dipole you make the
electrical length too long for a given frequency.

Hello Dan,

The 3905 Century Club Nets are welcome to Everyone !
The logistics of listening to 40M DX Stations has been a real challenge,
but we welcome everyone including DX.

We are currently having some discussions on the 3905 Century Club
Chat Reflector to remedy the problem.

Thanks,
Keith

Dear Walt,
"...the latest ploy...?"
How on earth can You SO misinterpret the message from my buddy
Stan/SM5DAJ? The least of all things - spam. Some of us like eQSL and
of course some may not do so...BUT, please do not blame eQSL, for
receiving Stanï¿½s e-mail.

This is only the way, through eQSL, that we found your e-mail address.
PSE forgive us for doing so. I had the pleasure of meeting You, Walt,
on 80m CW on the 29th of December 2001.
Perhaps we should stop taking the trouble in informing the Hams met,
while working as 7S0MG... We just thought that it was a nice idea...

It was only to show that Stan has made a special web site for our club
activities from May to December 2001, operating 7S0MG. We were 5 ops
and Stan and myself actually had the pleasure of working most of the
QSOs.

In this case Walt, we have exchanged eQSLs and this is where Your address was picked for, as we thought, showing an eventually interesting HAM Radio home page and a little more about the special call sign.
I am/we are VERY sorry, for any inconvenience on your part Walt. I hope that You do see our intention, for dropping You a line!

We also hope that You and everyone else find our QSL via the bureau, a nice one.

On behalf of Stan/SM5DAJ and myself - Hans/SM0BYD I wish You GOOD HEALTH, a pleasant summer and until we meet again, 73, Cheers & CARPE DIEM/SEIZE THE DAY!

Dear Hans,

Thank you very much for the nice QSO and the QSL. I remember the
contact very well, of course.

BUT ....

If every ham I ever contacted in the past 42 years sent me an
unsolicited email to tell me about their web site, I would have a
very, very full mailbox!

Spam is spam is spam ....

We have tried to explain it. What you have stated above is contrary to EVERY text on antenna theory - from the basics provided in the Radio Amateur's Handbook through the advanced theory provided in Electrical Engineering.

Adding loading coils/capacitors will always change the electrical length. They also may, or may not, change the physical length.

How can it be otherwise. Add a coil or capacitor to an antenna, and the resonant frequency changes. That means that the electrical length has changed, regardless of whether the physical length (which can be measured with a ruler) has changed.

If only the electrical length has changed - then the far field pattern does not change.

When we design antennas, we choose a physical length that will provide the radiation pattern characteristics that we desire. This is an approximate length - the radiation pattern only changes slightly with small changes in physical length. We then do whatever is necessary to obtain an electrical length that will make the antenna resonant at the chosen frequency. This will generally change the physical length as well - but that does not matter as long as the physical change is small. If the physical length change is too great - then the starting length was wrong - so we scrap it and start over with a different physical length.

I'm uncomfortable with "electrical" and "physical" length, because each represents only a single number. A simple linear antenna has not one, but two important properties: length and current distribution. For a given physical length, or a given resonant frequency (which seems to be being related to "electrical length"), you can have an infinite number of possible current distributions by placing impedances along the wire. For example, a bottom loaded shortened vertical has a different current distribution and hence a different pattern than a center loaded shortened vertical of the same length and same resonant frequency.

In practice, for short antennas, you don't modify the pattern much by changing the current distribution. A classic example is a half wave dipole, which has a sinusoidal current distribution, and a very short dipole, which has a nearly linear current distribution. (It's actually just a small piece of a sinusoid shape.) The radiation pattern of the infinitesimally short dipole looks almost the same as the pattern of a half wave dipole. (Try this with EZNEC to see for yourself.) If you could make the short dipole lossless, you'd find that the gain isn't quite a half dB less than the half wave dipole -- and that's because the lobes are slightly fatter due to the different current distribution. Of course you can't make a lossless very short dipole -- but you can make one that's pretty short with a loss that's acceptably low for most purposes.

So there's more to a linear antenna than "physical length" and "electrical length". You have to consider the current distribution if you want to predict the pattern.

Yes it is that simple. You can add a coil to an antenna element whose
electrical length is much longer than its physical length. Then that
element will resonate at a much lower frequency than the total physical
length of the element and coil.

If mailing from the USA, you may want to include Serbia-Montenegro in the address. I know of one fellow who had his envelope returned by the poist office for an "incorrect address." USPS doesn't seem to recognize Yugoslavia any more (it's not listed in their pull down menu on their Web site when looking up international rates).

Quick question: what's the mess with 40 meters? I've been hamming for about 5 years and I still can't get a real clear picture. Well, I've never bothered to investigate really but... :)

What's the allowed range in the US? In Europe? Why the differences?

It is a fact that conductor diameter affects the resonant length of an antenna. It becomes significant only when the conductor is short and fat such as may occur when the conductor is a short fat rod at VHF and at UHF

The "end effect" depends on such things as height above ground and is NOT the constant value as is frequently specified in the ARRL bibles.

The two effects are one and the same thing.

On thin wires at HF the effect is small enough to be ignored in comparison with the pruning which may be imagined necessary after an antenna has been erected.

Most pruning activities are unnecessary when based on the accuracy of SWR meters and antenna analysers at the higher frequencies. But it does keep users happily occupied which is not a bad thing.

You might be able to say that for practical reasons only. This is
basically untrue.

Consider a high 1/2-wave dipole of 14 gauge wire.

At 1.9 MHz the "end effect" results in a resonant frequency 40 KHz lower (2.1%) than a true 1/2-wavelength. But the working bandwidth of the antenna is 236 KHz between the 3dB points.

At 29 MHz the "end effect" reduces (2.9%) resonant frequency by 0.84 MHz but the working bandwidth is 5.3 MHz.

The ARRL Antenna Book gives an end-effect length reduction over the whole HF band of 5% but this probably includes the practical effects of proximity of the antenna ends to supporting and insulating structures, and height above ground.

The effect of enamel wire insulation and other thin insulation is entirely negligible.

Hey Tel, long time no see.
I'm not sure who you are jabbing at here but I think its pretty obvious
that element diameter makes a whole heap o' difference in length. At HF
its not much of an issue but at VHF/UHF you can't just whack out an
antenna of 'handy' tubing without some compensation for diameter.

If you don't believe me, just lower your 80 meter dipole down to 1 foot above ground level and check the resonant frequency. You'll be surprised at the experience.

Exactly the same reduction in resonant frequency occurs with radials when near the ground or other structures. When you think you have nice, resonant, 1/4-wave radials or counterpoises - you havn't !

Now you'll be reduced to making accusations that I'm misusing the misnomer "end effect". ;o)

Maybe it should be called 'ground effect' ? Uh oh, I think that the airplane boys have claimed that one already...

The distinction might be between 'self capacitance' (that can happen in complete isolation) and 'capacitance with other stuff in the area' (like small blue planets).

Geesus, I'm starting to sound like CAM...

>"end effect". ;o)

The way I understand it, the end-effect is a type of electromagnetic
loading. If the loaded medium changes, it would make sense that the
end-effect would also be changed.

You have just reconfirmed my long-held belief that each newsgroup's
resident asshole never has the guts to disclose his true identity or
email address.

Thanks for the nice email. :-)

If you have a WAP Wireless device, you may find

http://wap.hfradio.org/

a useful resource. Currently, I have propagation resources (live)
available (Ap, Kp, SF, SSN, Aurora, Wind, and more). I am adding
DX Cluster and SWL Database Search.

If you have problems, please let me know.

Here is a very informative Cushcraft R7 / R7000 tech page I found
with illustrations, tech tips, R7 trap drawings, R7 and R7000
instruction and assembly manuals too.

It is all free and also all downloadable. By far the best page of it's
kind I have
ever found...

GET YOUR DX NEWS DELIVERED TO YOUR EMAIL ADDRESS BY THE DXER
dxer@yahoogroups.com

ALGERIA, 7X
Mirek,9V1XE, is signing 7X0DX on 10-160m from Algeria mostly
between
1600 UTC und 0500 UTC from May 13-28. More information and the
logbook
are available online at: http://www.7x0.sp5zcc.waw.pl.

AMERICAN SAMOA, KH8, OC-077
David,AH6HY/KH8, is QRV from Manua Island (OC-077) from May
18-24.
He is working mainly in SSB on 10/15/20m. QSL via AH6HY, bureau
ok.
This DXpedition's website is:
http://www.qsl.net/ah6hy/samoa.html.

ANDREANOF ISLANDS, KL7, NA-039
Larry,K4WLS, is planning a trip to Adak island for 7-10 days
sometime
in May/June 2002.

AUSTRALIA, VK
AX2ITU and AX3ITU of the "Wireless Institute of Australia" are
active
on May 17/18 to celebrate the founding of the International
Telegraph
Union in Paris back in 1865.

CHRISTMAS ISLAND, VK9X, OC-002
Bert,PA3GIO, is on the air as VK9XV in SSB on all HF bands (not
30m!)
from May 18-25. QSL via PA3GIO, via bureau preferred! More
information
is available at: http://www.pa3gio.nl/VK9XV.
He will go to Lord Howe Island afterwards.

FAILAKA ISLAND, 9K, AS-118
Radio amateurs from Kuwait will sign 9K2F from here from May
22-31.
QSL via 9K2RA, bureau ok.

FAROE ISLANDS, OY, EU-018
Tom,DL2RTK, and Ric,DL2VFR, are on their way to the Island
Station

lighthouse on Streymoy Island to become active from May 20-22. More
details can be found at: http://www.iota-expedition.com.

ITALY, I
II0FM will be on the air from May 20-26. QSL via IZ0BTV.

JAMAICA, 6Y, NA-097
The Team Vertical (N6BT, KE7X, WA6O, N6XG, W0YK, N6XI and K2KW) will
be active from Jamaica during the CW WPX Contest. They will be on the
air as 6Y5/homecalls (in the contest: 6Y2A) on 6-160m from May 18-28.
QSLs: 6Y2A and 6Y5/K2KW via WA4WTG, all others via homecalls.

MONGOLIA, JT
The callsign JT1Y will be used by Nicola,I0SNY, and Gianni,I8KGZ,
starting on May 21. It is not known how long they will stay in
Mongolia. QSL via I0SNY.

NORWAY, LA
Some Norwegian radio amateurs are activating Sekken Island for the
first time from May 18-20. Look for them on the usual CW and SSB
IOTA frequencies.

Yemen, 7O
Chris,G4HCL, is expected in Sanaa on May 18. He intends to operate as
7O1YA or 7O1CL in SSB on 3790, 7045, 14145, 18125, 21275, 24975 and
28475 kHz and in PSK on 14080 or 21080 kHz.
QSL via G4HCL, PO Box 400, Eastleigh, SO53 4ZF, Great Britain.

QSL direct: 3B9FR, 3D2SJ, 3XY8A (AF-051), 4T4X (DL2JRM), 5B4ADA, 9A1CCY,

I am looking for the Yaesu FEX-736-220.
It is the 220MHz module for the Yaesu 736r multimode base radio.
I will pay top dollar.

>Wonder if the Real Joe Martin knows this

The last post extolling the great ab7sl webpage was signed by someone
else (not ab7sl). When I wrote to the e-mail address of said poster,
I had a vulgar threatening reply from - yes, AB7SL. If the above
was really a post by ab7sl, this spamming has gone too far. Does
anyone know WA5LHV? He doesn't have an e-mail address on the
Buckmaster site. I'm sure that making posts under someone else's
name is grounds for being dropped by one's ISP.

Derek aa5bt [my real name and callsign]

The messages posted come from the same IP block that AB7SL uses. I highly doubt that WA5LHV in Spring Texas would use Cableone A company in a totally different part of Texas.

If its ab7sl he is crossing a line. WA5LHV appears no where else on the net, has never had an email it looks like. So if this is AB7SL he now has stooped to a new low. I think a Letter to Joe Martin is in order. If it is him, only the real Joe Martin can take legal action, I hope he does.

as for AB7SL its highly unlikely Cableone will do anything. Only peer pressure will get AB7SL to GET IT.

Oh btw, AB7SL has joined FFA, If you can stomach it, go to their pages. SPAM CENTRAL.

Hello Derek..

I just happened on this thread.. I may interest you to
know that the "Cushcraft R7 / R7000 tech page " was stolen from my site at
http://www.iol.ie/~bravo/ . Since the day I challenged him about it, I have
been getting SPAM attacks, and virii attacks.. Coincidence??? I think not..
BTW he has lots of different email addresses..

I think you all forgot that "GAIN" is a relative thing. Did you know that Gain is dependent on how high you have you antenna. A 1/4 wave antenna is 0 Dbd on the ground or up to about a few feet but if you raise it to say 70 feet it is possible to have alot of gain. One thing I can say about a 1/4 wave is your radiating patern is excellent for DX. Bill

From the DXER@yahoogroups.com
From: "Steven Wheatley KU9C" <ku9cqslmanager@ku9c.com>

The Chinese Taipei Amateur Radio League (CTARL) announces its 7th DXpedition to Pratas Island. The call issued will be BQ9P. Operation will commence on or about 0900 UTC on June 4, 2002 and will end at approximately 2300 UTC on June 12, 2002.
Operators include BV4FH Paul (Team Leader), BV5CR Wong, BV3FG Robert, K4WA Steven, K5YY Sanford, W5FI Gary and W0IZ Igor.
The team plans to operate 5 stations on all bands, 6 meters to 160 meters.
QSL cards can be obtained via KU9C
Please Note:
-there will be no on-line logs for this operation.
-a pilot station will be announced shortly.
-Operating frequencies will be announced shortly.
Transportation costs and other DXpedition expenses are estimated at US$8,000. Donations will be graciously accepted with your QSL card, or in advance of the operation via KU9C.
Any questions, comments, etc. Please contact Steve KU9C at ku9c@arrl.net

Gain is typically a measurement of the difference in signal radiation strength of a given antenna compared to that of a 1/2 wave dipole under the same test conditions (for dBd) , or as compared to a theoretical 1/2 wave dipole in free space (dBi or dB isotropic).

Since this dipole is the reference antenna, it will always be zero dB because the test antenna being compared to it will either be better (+X dB) or worse (-X dB) than the reference antenna (0 dB).

Using accepted gain measurement practices, height would not affect the results, because the comparison is done under the same test circumstances. In other words, if a given antenna at 50 feet measures a 6 dB gain over a dipole at 50 feet, it will also measure the same 6 dB gain if both antennas are raised to 100 feet.

However, for the CB band, I guess anything goes as long as it sells antennas...

The question you should ask is: what are they relating the gain figure
to?

I've often found that they stated gain figures are based on something the
marketing dept. pulled out of thin air.

In all actuallity, you might want to think of a 1/4 wave verticle antenna
(ground plane) as having 1.3 dbi of gain (gain relative to an isotropic
radiator). A Dipole antenna has 2.71 dbi of gain (and is often used as a
reference for beam antenna gain, etc).

As for the commercial units you mentioned, the actual gain is lower than
a dipole (the Antron 99 is nothing more than an end-fed 5/8 wave
antenna).

also, any coils (loads) on the antenna often sacrifice real gain and
efficiency for space (thus, the gain goes down).

Hope this helps.

Not quite. dBi is gain compared to a theoretical point source isotropic
(same in _all_ directions, i.e. the polar diagram is a circle in every
plane) radiator, not a dipole, (half wave is the only sort, anything
else should be referred to as a doublet). This is theoretical as there
is no known method of creating an electromagnetic wave from a point
source.

>

A reference dipole is 0 dBd == 2.71 dBi, so we have two scales in common
use, which have an offset of 2.71 dB. Quite a few commercial suppliers
use dBi even for Yagi-Uda antennas to inflate the claimed gain figure
by 2.71 dB. They are also often guilty of specifying gain in dB, a
practice which renders their claimed figures meaningless, they could
be dBdl, for example (dBdl is gain relative to a dummy load)
>
> Using accepted gain measurement practices, height would not affect the

Again I don't agree. The accepted practice is to measure gain relative to
an isotropic radiator, or a dipole, in free space, i.e. infinitely far from
any ground plane or anything else. Gain is really a crude measure of the
way in which an antenna system (includes ground plane, radials etc. etc.)
distorts the radiation pattern. Gain figures should always be accompanied
by an indication of the direction in which this gain is produced. Some
directions are more useful than others for AR!!! Polar diagrams are very
much more informative as far as real world performance is concerned.

>
> However, for the CB band, I guess anything goes as long as it sells

Mostly use dBdl IMHO, good buddy!!!!

An ideal 1/4 wave vertical over an infinite perfect ground plane has a gain
of about 5 dBi.

Neglecting earth ground effects (reflections and loss), an ideal 1/4 wave
vertical over some lesser ground plane system will have a gain somewhere
between 2 and 4 dBi.

>A Dipole antenna has 2.71 dbi of gain (and is often used as a

An ideal dipole has a gain of 2.2 (2.16) dBi not 2.71 dBi.

If you have a very good measurement setup you'd be lucky to measure gain
within 0.5 dB.

Ah, but Steve, none of us live in an 'isotropic'
universe! We have to settle for this real one.
That means that the 'db's that the manufacturors
use is in reference to a beer can in the back yard.
That's why the gain figures for most antennas are
so high. Didn't you know that??

Matt:

Congratulations. I'm fairly new at this game (licensed in October of 2001 and on the air the following month). This was my first license (didn't go through Tech and General..sat for them all at once) so I was a rank beginner (I had never even heard a shortwave broadcast let alone a Ham QSO before getting my rig in November). Here's what worked and didn't work for me -- btw, Wes's advice is excellent in all respects -- mine is more Advice from a Newbie.

10m has been rather dead lately. I suggest you move down a bit. I found 17m a great place to start. It is an extremely friendly band (as ins 12m but there is quite a bit less actively there). These bands are much more laid back than 20m.

As Wes says, listen. Once you are done listening, listen some more. Get to know how things work; it's fairly obvious after a short time to understand what works and what doesn't; what is good op procedure and what is lid-like. Write down relevant information -- even if you have no intention of calling the stations. Callsign, Freq, time, signal report, name, QTH, QSL route. It's great practice.

Don't be afraid to make mistakes. I had (and still have) trouble with callsigns. The station I'm trying to contact says UA7RET and I hear UA7ERT or some such. I found this very embarrassing until I realized that no one cares; I've yet to have a station, DX or next door, get upset when I ask them to repeat the callsign. Everyone is going to do stupid things, don't worry about it. I've tuned up right on top of people (in the heat of the moment; excitement overruling brain -- never on purpose). It happens. I apologize if I later make the QSO; if not, I have looked up the callsign on qrz.com to see if an email address was listed. If so, I drop a line -- mostly to make myself feel better. I have received wonderful replies and even a few skeds. <grin>

Alert! My own stupidity follows. Use the Lock button. I had lots of trouble accidentally changing frequency when trying to futz the By-pass tuning.

Since you are running barefoot (sans amp) and likely will start with a compromise antenna, work "the edges." I've had excellent luck making contacts at odd times (3 am, for example). Not nearly as much local competition then.

Let the DX station lead the QSO -- you will know his/her style, of course, since you have listened before calling (except when you get lucky and find him when he first calls. If he is "running" (AB0SI, 59 fifty nine,name here is Oscar, thanks for the contact) don't try to start a rag chew.

Consider spending some time on a worked all states net (or similar). I found this great practice in correctly copying the correct information and picking out meaning from weak signals. These can be very useful in building your skills even if you are not particularly interested in WAS (worked all states).

Get your Extra ticket - lots of the best DX is found outside the US General band allotments.

Enjoy! This is a hobby -- a great hobby.

73

This question gets covered often on rec.radio.shortwave. The concensus
seems to be the CC Radio is better for a number of reasons like digital
readout, etc. The GEs are notorious for poor alignment at the factory
and poor dial calibration even after re-alignment. Performance wise,
its close with the CC having the edge. Of course it costs considerably
more too.
Many folks still consider the SRII to be considerably better than the
III.
YMMV.

Geek - somebody who enjoys or takes pride in using computers or other
technology, often to what others consider an excessive degree.

Nerd - Geek in training.

Title: 74th Annual Atlanta Hamfest!
Event Type: Hamfest
Description: Welcome to the 2002 Atlanta Hamfest, sponsored by the
Atlanta Radio Club, W4DOC, and the American Radio Relay League.
Now in it's seventy-fourth successful year, the Atlanta Hamfest is the
"must visit" amateur radio event for everone. This is one of the longest
running gatherings of radio amateurs for buying, selling, demonstrating,
exhibiting, swapping of equipment and swapping stories.

We will offer:

Large tailgate area
Plenty of free parking
20,000 square foot air-conditioned Indoor Market
37,000 square foot covered Outdoor Flea Market
Campsites, including full RV Hookup, for 44 hams
Educational forums and guest speakers
Displays and exibits
DXCC card checking
VEC license exams
Prizes
Food

See http://www.atlantahamfest.com for details!
Starting Date: 06/01/02
Ending Date: 06/01/02
City: Marietta
State: GA
URL: http://www.atlantahamfest.com

AW Bothnia 2002

A team of OH6&#65533;s will be active from two different IOTA-islands between 8.6
and 15.6.2002.

The team expects to be QRV on 8th june 2002 with a callsign OH6AW from
Bjorkon island, EU-101.
Operators at Bjorkon will be OH6NJ, OH6XX, OH6UV, OH6HJE and OH6MTG.

The team will change location at 12th june and move up to Hailuoto island,
EU-184.
The operators at Hailuoto are OH6NJ, OH6UV, OH6HJE and OH6MTG.
Callsign at Hailuoto will be OH6AW/8.
Depart from Hailuoto will be at 15th june.

Stations will be active on HF, 6m, 2m and 70cm from both locations.

Amateur Radio Newsline™ Report 1293 - May 24 2002

This is a special announcement: Attention all listeners. Please be advised that our next newscast, Number 1294, will not be released until Sunday evening June 2nd. This is due to staff travel to an out of town event and will affect only next weeks newscast. ARNewsline newscast number 1295 will return to our normal Friday release on June 7th. Please adjust your release schedule accordingly. Thank you.

Also, once again this weeks Amateur Radio Newsline™ newscast is extremely audio intensive. We believe that it is impossible to really appreciate the words of those quoted without hearing them for yourself. For this reason we suggest that after reading this weeks print edition that you take your web browser to:

http://www.arnewsline.org

Click on the newscast number then download the MP3 audio file. Next sit back and experience a 20 minute "audio picture" of Hamventionr 200 for yourself.

Thank you. End special advisory.

--

Amateur Radio Newsline report number 1293 with a release date of Friday, May 24th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. 2002 turns out to be the year of surprises at Hamvention. This story is first on Amateur Radio Newsline report number 1293 coming your way right now.

(Billboard Cart Here)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 1

If nothing else, the 2002 Dayton Hamvention was filled with surprises. Surprises like this:

--
"I just flat do not believe that. What are the odd? The top three prizes and people without calls win them? There's a lot of guys walking out of here with their heart down in their shoe soles."
--

That's right. The top three prizes -- three top line ham radio stations and this year they were won by non hams. And before some of you channel

cops start saying that non hams cannot legally win ham gear guess again. The law is on their side. Not only did they win it. They went home with it.

Another surprise? How about business. Business as in what may be a record year for vendors. Why? Because those who came to Hamvention 2002 were armed with cash and ready to buy. Just ask Radio School's Gordon West, WB6NOA:

--
Gordon West WB6NOA: "Well at he booths I was working to show the Gordon West Radio School products the sales were very, very positive. I mean -- people came here to get equipment and to get back on the air.

Many new hams were going on the air for the first time, yet there were allot of older hams who were sort of not on the air allot trading up to new equipment.

Certainly, I think we are about where we were last year for attendance but enthusiasm in acquiring new equipment? Yes! Much more than last year.
--

As to the size of the crowd? There is still no official figure. Also, the weather was a bit unpredictable. Friday was wet. Saturday was first clear then wet. Sunday turned out to be the nicest weather of all. CQ Magazine's Rich Moseson, W2VU, was happy either way:

--
Rich Moseson W2VU: "I just love rain. On Friday it rained and everybody was inside and it was very, very busy and we had a great show.

Saturday it was nice outside and the Flea Market people were happier than they were on Friday. Overall, as always. Good show."
--

Moseson's view was echoed by Chip Margelli of Vertex Standard -- the Yaesu people:

--
Chip Margelli K7JA: "I think Hamvention this year was great. The weather was very cooperative especially on Saturday. This gave us lots of time to talk to customers and describe our products. We think that everybody was in a festive mood and a buying mood and that was good especially with all of the new products we have here. We've had a tremendous time here at Hamvention."
--

In reality, Hamvention 2002 was a buyers market. Dealers kept prices low and lots of major ticket items moved across the sales counters. In fact, it was possible to buy a Yaesu FT-817 for under $500.

As to what was new this year? Listen to what some of the company reps brought with them starting with Vertex Standard's Chip Margelli.

--
Chip Margelli K7JA: We have introduced new products in every major category. We introduced the Mark V Field high-end HF; the FT-897 second generation `man-pack' portable; the VX7R submersible handheld; the FT-8900 `quad-band' 10 meter, 6 meter, 2 meter and 70 Cm mobile radio and the Wires Internet repeater linking system. So we have had a very busy time."
--

Not to be outdone, Kenwood's Leo Famie, KJ6HI, said that those coming to his booth wanted to see a little HT called the F6:

--
Leo Famie, KJ6HI: F6, our new HT. A tri-band hand-held covering 2 meters, 220 and 440. It has a receiver from about 500 Kilohertz to 1300 MHz but blocks out cellular telephones. But the neat thing about this radio is its all mode receive in the band B. AM, FM, USB, LSB and CW."
--

Famie says that dealers sold well over 300 of these new H-T's making the F6 was a bright star for Kenwood at this years Dayton show.

And what about Icom you ask? We asked Ray Novak, KC7JPA, what was hot and what those coming to the Icom booth wanted to see:

--
Ray Novak, KC7JPA: 706 Mark 2 G by far. Also allot of interest in a new digital radio that we have that will give you bandwidth for data equivalent to a T-1 line."
--

One guy who always has something new up his sleeve is MFJ's Martin Jue, K5FLU. This year he gave Amateur Radio Newsline a peak at two new goodies. The one that really caught our eye is a high frequency beacon network receiver that is so pretty that it would be as much at home in your livingroom as in your hamshack. Not only that, it lights up a LED on a map to show you what beacon you are actually hearing: Martin gave us a simple explanation of how it works:

--
Martin Jue, K5FLU: "The beacons are precisely timed...so everything is exactly right. What we did was to duplicate that timing sequence in here. And we make sure that it is always right because we have an atomic clock receiver in here."
--

MFJ also showed its new Morse code interface box. Not only does it decode the C-W signal your receiver is hearing. It also lets you plug in a key, paddle or even a keyboard and send Morse like a pro.

But new gear and great prices were not the only surprises at Hamvention 2002 and we will have more later on in this weeks Amateur Radio Newsline report. (ARNewsline™)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7QVK repeater serving Tucson Arizona.

(5 sec pause here)

**
RESCUE RADIO: HAM RADIO ASSISTS FOLLOWING UK RAIL ACCIDENT

RAYNET -- the United Kingdom's equivalent of ARES and RACES here in the United States was called out on Friday, May 10th. This, following a railroad crash that occurred in the city of Potters Bar less than one mile from the RSGB Headquarters.

The accident took place at about 1 P-M. G4MWO says that Hertfordshire Raynet County Controller, Trevor Groves, G4KUJ, was contacted at home at 2 P.M. and asked to assist with setting up the local Emergency Control Vehicle. Groves had it operational by 4.20 P.M. He then provided technical and administrative support to the relief administration staff who used it until office accommodations were arranged at about 8 P.M. that evening. (GB2RS)

**

RADIO LAW: COMMERCE COMMITTEE VOTES TO DELAY SPECTRUM AUCTION

Back on this side of the Atlantic the House Energy and Commerce Committee approved a measure that would delay the government's June 19th sale of spectrum now used by television broadcasters and sought for wireless services. The panel approved the action on a voice vote May 5th. As previously reported, this legislation was sought by a large segment of both the wireless and broadcast industries. The bill now goes to the House floor for consideration. (Published news reports)

**

SPECTRUM SHARING: MOVE OVER DIRECT TV - YOUR SPECTRUM IS ABOUT
TO BE
SHARED

The 12 GHz downlink spectrum used by Direct TV and Echostar is about to shared by terrestrial services. The CGC Communicator says that thanks to a creative idea and a multi-year lobbying effort by Northpoint, the 12.2 to 12.7 GHz band will soon be used for new video and broadband communications services, such as local television programming and high-speed Internet access. Technically, the new service is called "MVDDS," short for Multichannel Video Distribution and Data Service. (CGC Communicator)

**

RADIO ACCIDENT: FIRE ATOP THE KCBD-TV TOWER

The C-G-C Communicator also reports that KCBD-TV, in Lubbock, Texas, recently installed a new Andrew batwing antenna designed to accommodate both its channel 11 NTSC and channel 9 digital transmissions. After only five days of operation with just N-T-S-C power applied, there was an apparent arc-over and the
aerial was destroyed by fire. The station resumed NTSC operations using an old Alford antenna located on the same tower. Engineers are trying to determine the cause of the failure. (CGC Communicator)

**

GATHERINGS: WEAK SIGNAL BREAKFAST IN NORCAL

The Western States Weak Signal Society and Sidewinders on Two will jointly host a the semi annual "Brunch, Grip and Grin" in Northern California. The Date is Saturday June 1st. The location is Bakers Square in West Sacramento California. As usual, there will be door prizes and a good raffle of a radio. It all starts at 9:30 a-m, Pacific Savings Time. For more information contact W6OMF by e-mail to w6omf@cwnet.com. (VHF Reflector, WSWSS)

DAYTON 2002 - A YEAR OF SURPRISE - PART 2

Now, continuing with our coverage of Hamvention 2002, lets look at the forums. Emergency communications was this years Hamvention theme and all of the sessions -- about 50 of them -- were in some way dedicated in some way to it. And while we could not visit every one of session, we do know that for all three days the forum rooms were packed. In fact, many sessions had people lined up against the walls and sitting in the aisles. That included our own Ham Radio Town Meeting that featured Popular Communications Editor Harold Ort, N2RLL as the keynote speaker. His theme: Emergency communications means more than just ham radio:

--
Harold Ort N2RLL: "I want to say that now is the time to learn to operate with other services in concert and not just with ham radio. That's really my message. And if you are wearing the blinders: If you are wearing the ham radio blinders -- take them off. Please.

I don't have all of the answers but I would like to have folks depart from business as usual. We have allot of smart people out there with specialized know-how.

And that's the beauty of ham radio. We can bring allot of radio users into the emergency communications mix so that we can help to make America safe.

Ladies and gentlemen: If we don't get it after 911, we really never will. Thank you very much. (Applause)
--

Ort's message: Its time to break down the barriers that divide us and work together for the good of our nation and the world. Or as Harold

himself said: If we don't get it after 911, we never will.

Another session that drew a stand room only crowd was the FCC forum with Bill Cross, W3TN. That one you can hear right now on the RAIN Report. Its on the web at in streaming audio www.rainreport.com or on the phone at 847-827-7246. (ARNewsline™)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 3

The Hamvention Grand Awards banquet was held on Saturday evening. This years recipients included Owen Garriott W5LFL and Tonly England, W0ORE who shared the Special Achievement award:

--
OwenGarriott W5LFL: "As perhaps you could tell from that brief introduction, hamming has been a part of my life for over 55 years. I started with my father and perhaps you can tell from the sequence of events in my professional career hamming was a very strong influence on the direction. I went to undergraduate school, to college and to a professional career after that.

I know that this story is not unique. In fact it wouldn't surprise me if there were some 10% to 20% of those of you in the audience who could provide a similar story about how hamming has influenced your professional career as well as your past-time in the area of ham radio.

I do want to thank all I the Amateur Radio community for the benefit it has been to me in directing and guiding all of my professional interests over the past 55 years: All of the way back to the time that my father asked me to come along to code school, to theory school and ending up in my getting my first license.

It has been a great career and I owe an awful lot of it to Amateur Radio. Thank you."
--

Tony England W0ORE: "It was probably in the 9th grade when one of the big blizzards was coming through West Fargo and they sent us home. I remember vividly: My bedroom was up on the 2nd floor. All of the now was blowing by the window and I was playing around with the radio and I was talking to this Pastor at a mission in South America. It was a jungle setting and he was describing what they were doing down there.

And you can imagine what an imagination expanding experience it was for a kid in North Dakota to be able to talk to someone living in the jungle of South America? It was that kind of experience that we were hoping to share when we talked to young peoples groups on Spacelab II through the Amateur Radio system. And it is something that I hope we pass on to other kids.

When maybe one of my granddaughters is a teenager and an Amateur Radio operator I hope that she has the chance to talk to a professional female engineer who is on a spacecraft on its way to one of the moons of Mars. So I hope that all of you keep up this good work and see that this happens. Thank you. (Applause)

--
Al Waller, K3TKJ, was next. He received this years Technical Excellence award for creating qsl.net:

--
Al Waller K3TKJ: "...With that and the insight of the Dayton Hamvention Awards Committee we have certainly legitimized another mode of communication for ham radio. The Internet is not the enemy of ham radio that I have heard professed so many times. It is just another mode of operation.

Today we have hundreds of thousands of QSL users on the Internet. It is a friendly place. The hobby is better for it and I am honestly proud to be a small part of it."
--

Then, the man that everyone was waiting to hear from. The 2002 Radio Amateur of the Year, Hap Holly, KC9RP of RAIN. His closeing remarks brought down the house:

--
Hap Holly KC9RP: "In closing, please allow me to borrow from this years Winter Olympics a familiar international theme that sums up my exhilaration at being selected to receive this award. Simply put: `the year 2002 has truly been my Gold Medal year' in the Olympics of Amateur Radio. I am indeed honored to be chosen as Radio Amateur of the Year by the Hamvention, but also to be the first person with disabilities to receive this plaque. Thank you very much. (Applause)
--

But there was another surprise. This one involved KC9RP, a radio and a company known as Alinco and our producer Bill Pasternak, WA6ITF:

--
Bill Pasternak WA6ITF: "Hi Hap. I'm changing my uniform tonight. I was asked by the wonderful folks at Alinco and ATOC Distributing any by Evelyn Garrison to represent them because they are at a business meeting. But Hap, they would like for you to have...your very own -- brand new -- DJ-196 two meter handheld as their token off appreciation for what you have done and for what you and Stephanie both do. Enjoy it my friend." (Applause)

--

But the surprises were over yet. At least not for KC9RP. When the dinner prizes were drawn, the first out of the barrel was Hap Holly. And in addition to the Alinco H-T, Hap also took home a brand new Icom IC-V8000 two meter mobile and base radio.

So what about those who attended. What do they have to say. As everyone was heading out of the HARA Arena following the close of Hamvention 2002, Bob Sherman, K2SJP, summed it up best:

--
Bob Sherman K2SJP: "Its the best Hamvention that I have been to."
--

K2SJP says that he plans on coming back. Many others Amateur Radio Newsline spoke said the same thing. (ARNewsline™)

**

INTERNATIONAL - UK: ON THE AIR EVENT
Turning to international news, word from GB2RS that members of the Preston Amateur Radio Society are operating GB2COP until the end of May. This, to celebrate Preston being granted city status during The Queen's jubilee year. Activity is on 40, 20 and 15 metres HF, plus 2 metres and 70 centimeters. QSL GB2COP with an SASE either via the bureau or direct to M1KIT. (GB2RS)

**

DX

In D-X, A group of operators from the Kuwait Amateur Radio Society will be active as 9K2F from Failaka Island until the 31st of May. QSL is via 9K2RA either direct or through the bureau. (RSGB)

Also, Team Vertical is heading back to Jamaica for the CQ WPX CW contest. The group will operate from 160 to 6 meters as their home calls slash 6Y5 until the 28th of May. They will participate in the contest as 6Y2A with six full gallon stations. QSL via WA4WTG. (RSGB)

**

THAT FINAL ITEM: THE HAMVENTION THOUGHTS OF W6AQ

And finally this week, another look at Hamvention 2002. This time, through the eyes of a ham who has been to many of them. His name is Dave Bell. His call sign is W6AQ and as Hamvention 2002 was drawing to a close he shared his thoughts with our producer Bill Pasternak, WA6ITF:

--
Dave Bell W6AQ: "This was a great Hamvention. Except for the weather on Friday it was absolutely perfect.

Bill Pasternak WA6ITF: "What was the highlight to you?"

Dave Bell W6AQ: "I think that the highlight for me was the special ARRL dinner on Friday night for donors to the ARRL where we heard Joe Taylor, K1JT, give a really, really interesting talk. He has got a big sense of humor for a Nobel Prize winner, I must say."

Bill Pasternak WA6ITF: "We saw allot of new products here. Anything catch your eye?

Dave Bell W6AQ: "Actually the Yaesu FT-1000 Field I probably would have bought instead of the Mark V if it had come out at the same time. And I must say that getting an FT-817 little radio for under $500 broke my heart because I paid twice that."
--

Hamvention 2002 is now history, but Hamvention 2003 is now less than a year away. Dave Bell, W6AQ, says he plans to be there. So will we, and we hope to see you there too. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, one last call for nominations for our very own Amateur Radio Newsline Young Ham of the Year award. The final date to postmark a nomination is May 30th. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

2129. YJ8MN QSL via

The more I look for info the more I get confused. The various QSL info spots seem to be evenly divided in saying YJ8MN's route is JH3IIU and others say JH3ISU. I thought I copied IIU but thats an easy mistake to make.
Can someone say for sure? And whichever it is, can this card be sent via JARL or is there a better direction.
Thanks,
Bill WX4A/KP4

2133. FT: Dell PIII Laptop

Newsgroup: rec.radio.amateur.dx
Date: 2002-05-28 01:51:14 UTC
From: wampus@nc.rr.com
Message-ID: <3cf2e26d.862007751@news-server.nc.rr.com>
Source record: 12909

I have recently upgraded my laptop and have a very nice Dell Latitude CPx to trade for a Japan Radio NRD-535D.

This laptop has a P-III 500MHz CPU, 192MB of RAM, an 11.2GB harddrive, CDRom, Floppy with external connector cable, Ethernet PCMCIA Card, 56Kb PCMCIA Modem card, 13.5" Color TFT Active Matrix Display, Dell Laptop case and two high capacity batteries (both of which are brand new). It comes with Microsoft Windows 2000 Professional w/SP2 installed, but an original Dell Win2KPro w/SP1 CD.

Will trade even for a JRC NRD-535D HF receiver in good cosmetic and working condition. Must have a serial number above 56000 and the original 535D features installed.

73s,

Chuck Yarbrough
Durham, NC

2134. WTB: Hygain or Triex Crank Up Tower Stand Off Wanted.

Newsgroup: rec.radio.amateur.dx

I am looking for the stand off that mounts at the top of each tower section
of a Hygain or Triex crankup tower. Stand off is galvanized with 1 U-Bolt
for attachment to tower,
and it is an angle or tubular rod to a V on the end to attach coax.
If you have one in good condition please let me know what you want for it.

I ordered one on the Hygain website this weekend,
to later find out that Hygain or (MFJ, Ameritron, Vectronics, etc..)
does not have these items to sell. They don't even have the
towers, yet they will be glad to process your transaction to your
credit card for something they don't have. There representative
had no idea this was on the internet, and they said it may be a few
years before Hygain will be selling towers again.
I sure saw one at Dayton with antennas on it !

Please send email to laborkei at hotmail dot com

Thanks..
Keith, WD5BJQ

I make my own, it's very easy to do and it also allows to attach a pulley on the opposite side for raising dipoles.

I bought (3) three foot 1" square steel tubing pieces from the local hardware store, along with three 3" "U" bolts, and three 2" bolt mounted pulleys. Drill the tubing for a "U" bolt on one end, and mount a pulley on the other. Then center the tubing against the top flat strap on each tower section and drill two holes through the tubing and the section top strap. Bolt it down, and you're done.

If you attach the coax only at the top standoff, and let it float in the "U" bolts on the other standoffs and it will go up and down with the tower and coil up nicely at the bottom of the tower, rather than having big loops of coax at each section when the tower is lowered. Also, you have 3 easy attachment points for wire antennas on the other ends.

Total cost was about $20.00 and 1/2 an hour to put them together...

Did you put USA on it? Was it 'bounced' from the USVI post office or
somewhere else?

Hi All

I recently aquired a Butternut Vertical antenna. It is a 6 band so I think it is an HF6-V but not sure. It is currently disassembled and I amd trying to find out how it goes together. Does anyone out there have a set of instructions they could e-mail to me, it would be greatly appreciated.

Thanks for taking time to read this.

Sure you do. There are no Usenet Police, so the users are the only
ones who can offer input about what is or isn't posted in a newsgroup.

I'll have to agree with your orginal statement, the posting of net
checkins has been done enuff times so anybody who's interested
in knowing about the net already knows about it. Even interesting
information becomes SPAM if it's done often enuff........

Not to mention that we all know this is a DX group, and that real
DX'ers don't work DX on a spoon fed 2 by 2 bang bang did
you get your report I think the first number is right but try the
second number again DX net........ More less W.A.S. Makes
you wonder who dresses these guys when they get up in
the morning.

Jim,

It just shows how uninformed you are.
Many DX Stations are working towards WAS.
I can only make that assumption based on them
checking into our nets and applying for Century Club
Awards.

What is wonderful about this hobby is you can
create your own personal goals and do what
you like to do, not what the ARRL wants, or
what CQ, wants.. fulfill the things you like to do.

I am a long time DX'er, have a little under 300 countries
confirmed, and now my think is nets.
My favorite is 160M during the winter.
I have friends who are also long time DX'ers, and they
are now getting into Grids on 6 Meters.

So, I guess what I am trying to say is let the viewers
decide on what interest them.

If you don't like what you see, then create a Filter.

Hello Evan,
The ITU Prefixes list is what you need. I have a download link for it
on this page URL below...

Uninformed about what, spoon feeding List Lizards ?

Nah, I've heard all that stuff on the radio. Twenty Two,
Bang Bang. Good contact. Over Over. Did you
get your Four By Four ? Please copy. Make your call.
List Lizards stick out like sore thumbs, hard to miss one
when you tune by.......

>Many DX Stations are working towards WAS.

Really ? No kidding. I worked 50 states on five bands,
on CW and SSB with the exception of Vermont on 80
meters, from Guam.

But I'm not a List Lizard, like you are, so I never
used nets or skeds, I just turned on my radio and tuned
around. Even called CQ VT on 80 meters thru numerous
east coast sunrises one winter, but never did work the
last one. Oh well, I was trying anyway.....

Does sitting on a frequency and waiting for a net control
station to make contacts for you really deserve to be
called "working" ? Wouldn't it be more appropriate to
say 'Many DX stations on your net are WAITING on
WAS' ?

>I can only make that assumption based on them
>checking into our nets and applying for Century Club
>Awards.

What you can assume is that ham radio has changed.
Somewhere along the line we seem to have forgotten that
this is a COMMUNICATIONS/TECHNICAL hobby, not a
contest to see who can fill a shoe box with post cards first.

Lizards flock to your net because they aren't capable of
carrying on a CONVERSATION with anybody on the
radio, and if they were, they'd have a hell of a time sorting
thru the post card collectors to find anybody who WANTS
to have a conversation. And since they are technically

uninclined, most of them haven't figured out how to make
a dipole and get it up 20 feet, so TALKING to anyone
is out of the question. Need that Net Control with the
big antenna to even tell that most List Lizards are there,
and to relay calls and signal reports for them.

What your nets do is create poor operators - people who
can't copy a call sign or a signal report with the slightest
amount of QRM, people who won't make the effort to learn
about propagation and realize that if they are on the right
band at the right time, they can communicate anywhere on
the planet. People who won't make the effort to improve
their stations, people who buy dipoles instead of making
them. People who want to sit and have things handed
to them. People who aren't sure WHO they 'worked' until they
have seen their call in the online logs or until the 'net control'
tells them who they worked.

You create Welfare DX'ers...

>What is wonderful about this hobby is you can
>create your own personal goals and do what
>you like to do, not what the ARRL wants, or
>what CQ, wants.. fulfill the things you like to do.

I agree totally. But this isn't a hobby. This is a Usenet newsgroup.

If being a List Lizard blows your dress up, then go do it. I never
suggested that you stop playing with your net. I only agreed
with someone who suggested that it was not appropriate for
you to post your daily List Lizard Tally in this newsgroup.

>I am a long time DX'er, have a little under 300 countries
>confirmed, and now my think is nets.

Good for you. But I'm not impressed. Because I have been
a ham long enuff to realize that there is no place on the face
of the earth I can't talk to with a 100 watt HF radio. Even with my
lousy antennas. And the fact is that if you could line up one
ham in each of 334 DXCC countries, put him on a
predetermined frequency at a predetermined time, and have
the whole world shut up at that time, I could work 334 DXCC
countries on HF in a couple of hours. Fifty years ago, DXCC
was an accomplishment. Now it's a joke. For details, see:

http://kh2d.net/junk/dxcc.html

What makes working DX difficult ?

1. QRM.
2. Other people calling at the same time you are.
3. Other parts of the world with better propagation than you have.
4. Other people with better stations than you have.

5. Other people with better operating skills than you have.

How do you overcome all of those things ?

1. Learn how to copy thru QRM.
2. Learn when to call and when not to bother.
3. Learn about propagation. 2x2 now might be 40 over in two hours.
4. Improve your station, make it the best it can be.
5. Hone your operating skills. Learn how to LISTEN before you call.

Now if that seems like a lot to do, then you can just use Plan B:

Sit like a lump on a DX Net until the Net Control feeds you some DX to work, tells you what the DX station's call is, helps you copy the signal report, and makes everybody else be quiet while you do it......

I am also a long time DX'er with over 300 countries worked, and they are all 'confirmed' because I don't collect post cards, so I don't need any confirmation of the fact that I talked to somebody on my radio other than the log entry I made when I did it. I don't do it to impress my peers, or to get a piece of paper before the ham down the street gets one. I only do it to impress myself.

Do you really think there is another ham on the planet who actually CARES what you or I have worked or confirmed ? If you do, you need to get out of the basement more often. Post card collecting is not an US sport. It's a ME sport. Hams care about their OWN post cards only. Not about anyone else's post cards...

>So, I guess what I am trying to say is let the viewers
>decide on what interest them.

Exactly what I said. I cast my NO vote for posting the list of checkin's on your net in this newsgroup, and I also agreed with the gentleman who cast the NO vote previous to mine.

You count the votes and we'll do what the "viewers" decide, that's fine with me.

>If you don't like what you see, then create a Filter.

I believe that contradicts what you said in the previous line.

Democrat one minute, communist the next ?

Unless you assume you are above the "viewers" of this newsgroup. Which makes me wonder if you aren't a Senior List Lizard, aka The Net Control, you know, the guy with the ego as big as the Goodyear Blimp who has no life other than 'helping' other RF impotent 'hams' collect post cards........

I don't need filters. I have long since learned to copy thru the QRM. I've been casually ignoring your List Lizard Tally since you started posting it. I only became involved in this

discussion to point out it wasn't necessary for anyone to
apolgize after telling you to take a hike. I realize that NO
votes aren't allowed on your net, but here we can vote YES
or NO on anything we care to vote on.

>73's

73 (but only one) to you also, whomever you are. I seemed to have
not yet seen your call or your name on any of your 'net' messages,
but please excuse me if I missed it (and missed the net too). Now
that we are talking to each other, maybe the net control will tell me
who you are......

Does anybody know who I just 'worked' :-)

Jim, KH2D

FWIW, I'm in total agreement with Jim's post.

I also initially ignored the posts from "laborkei", hoping that
he/she/it would eventually figure out that most DX'ers could
care less who checked in to the 3905 century club.

Apparently a bigger clue bat is needed.

Whether working DX on a net is valid or not (and I tend to agree with Jim on this) the postings I read only contained one DX station among all the listed checkins.

Might be a valid post on r.r.a.misc but sure doesn't seem to have much value here.

Hi Jim.

The manuals etc. are available to read online or download at:
http://www.bencher.com/pdf_download.html

Have a great time with the HF6V, I do with mine!
The ground is the secret, avoid elevating it and using elevated radials if
you have good ground in your area.

Have gotten into PSK 31 in the last few days, and have been rapidly picking up new countries. Got 4 new ones just last night, in under an hour of operating.

Am seriously considering using the ARRLs QSL Bureaus for my DX QSLing, postage costs being what they are. Am wondering if anyone has used them, and can give me any pros/cons, or practical advice.

Thanks and 73's

Robert / N4IXT

Yes I have used the ARRL qsl bureaus for DX qsl'ing. While generally I did receive replies to my cards sent that way it sometimes took over 2 full years to get the card. I found that intolerable and a bit silly so I started going direct to the DX op and that worked fine in nearly all instances with a single $ US green stamp but cost more $$$ than bureau.

Now I do 100% free electronic qsl'ing and it is a treat to be able to provide confirming qsl's and receive them back in an hour or less in many cases and almost always within 2 or 3 days. Sure beats 2 years and it is all FREE.

Details on my web site listed below.

The downside is that they are totally valueless for awards.

Making them of equal value.

Kind of dumb really. The ARRL will accept electronic verification (e-
mailed logs) for a contest but not an award.

Hello Walt,
I have to disagree that eQSL cards are "totally worthless for awards"
as you described. Walt, the ARRL is just one of dozens and dozens of
Ham Radio awards programs administrators. They are a small part of Ham
Radio awards. They sure are - not - the sum total and complete source
for operating awards at all. Many other organizations do accept
electronic qsl's.

I found over 300 lines of Ham Radio operating awards listed on this
page when I saved it as a text file..
1. http://www.ac6v.com/hamawards.htm has to be way over 100 different
groups with active awards programs.

ARRL awards (esp. DXCC) are widely recognized..yes....but they are
less than 1% of the Ham Radio Awards organizations. As a matter of fact
eQSL has their own set of e-Awards and of course they can all be
obtained through 100% electronic qsl'ing. www.qslcards.com

What does it matter if ARRL - or - eQSL verify you earned a DXCC - type
award? You still can "prove" (if you need to) to others you have at
least 100 confirmed DX countries....that's the way I see it anyway.

I'm offering an award for anything you would like. No QSLs required
at all but if you insist in sending eQSLs, be my guest! Send $50 and
I'll have a certificate sent out ASAP. Suitable for framing too.
Impress your friends. Don't wait. Send your check right away. Be
Number 1. Hurry, if you wait too long, you might be number 2.

Robert,

I try to QSL 100% on my QSOs, and use a combination of direct mail for new countries that I need for DXCC, and the bureau for stuff that is not real important to me - understanding that the bureau takes about 8 months for my card to get to the other side, and another 8 months for a card to get back. I do not assume that all third-world hams have computers, internet access, ISP accounts and email addresses... but most everybody has a postal address.

I do a "batch" of bureau cards every quarter (4 times a year) and I send over 1000 cards to the ARRL each time. This package weighs 7 pounds and costs $49; compared to direct cost of the envelope, + .80 airmail postage, + $1.75 IRC with each direct mailing. Obviously, I am not about to send those 1000 bureau cards as directs...

I am not a big fan of eQSL'ing yet. I still like the look and feel of "real" cards; the excitement of opening the envelope from the bureau; the comfort of knowing that real cards still count for everyone's awards.

So, for at least the time being, I am still a QSL bureau and postal QSL kinda' guy. I believe this will change in the near future, with a global infrastructure for eQSL'ing, but at the same time a parallel practice of postal card exchanges will continue in our hobby for a long time.

I do almost the same thing as described below, although my "batch" of QSL cards is usually 150-200. I stopped QSLing every contact long ago, but a rare DXCC location or an unusual call sign prompt a QSL.

Returns for bureau QSLs to rare locations is very poor --- and I can understand this from the viewpoint at the rare DX location. I send direct to rare locations (with one or two GSs, depending on the location of the station or the QSL manager). My return for direct QSLs is about 80% (or better). My return for bureau QSLs is in the 25 % range (or lower). The best situation is when there is a domestic QSL manager; the return is almost 100% in this case---with or without an included GS.

I have noticed, unfortunately, that fewer and fewer stations with "contest call signs" will return QSLs. Some feel that contest QSOs are not worthy of a QSL, and perhaps some do not have separate QSL cards with the special call sign.

Another factor with direct QSLs to rare locations is the "theft factor". This varies by country, of course, but can be very frustrating. Yet another factor is that a few stations (some of which are rather well known for the practice) simply keep the GSs and never reply. Fortunately there are very few of these.

Postage costs have gone up in many countries. With a few exceptions, one GS still covers it, but just barely.

Even with all these factors, the ARRL outgoing QSL service is an important benefit for me.

Hello Walt,
You asked me to "name them" and so I did. Now you "have no interest in the matter". Sounds to me and looks like to everyone else you are out of ammo on this one. The list of over 30 eQSL-accepted awards organizations is right there as you challenged me to do. I don't care what you think of eQSL..you inferred no one accepted them for awards and even called them "worthless".

I gave a working URL that shows over 30 different groups that - do - accept them.

I think my work here is finished....

Bill Ogden <ogden@us.ibm.com> said :

Lots of very good advice!! From the point of view of an avid QSLer,
you're right on the money.

>I have noticed, unfortunately, that fewer and fewer stations with "contest call
>signs" will return QSLs. Some feel that contest QSOs are not worthy of a QSL,
>and perhaps some do not have separate QSL cards with the special call sign.

This is not altogether true in my experience. Yes, I've had a dickens
of a time getting a few powerhouse contesters (especially from the
so-called "easy" countries like Spain, the Canary Islands and
Switzerland), but by and large, most of the "new ones" I worked in
last year's CQ-WW-SSB and this spring's ARRL DX contests QSL'd in very
reasonable time. I think about 4 weeks after the contest in October my
confirmed country count doubled to around 75 or 80 (I'd just started
DXing and QSLing in earnest not too long before that). The only one I
had a real long wait for (that I was really looking forward to) was
3V8BB. Once I figured out that I sent it to the default address and
not the actual operator of the station (Hrane), I corrected the
mistake and got the card in a couple of weeks.

If it's a new one or a new band/mode I always QSL direct. I use the
Eaton #9 air mail envelopes for my SAEs and security #10 regular
envelopes to send everything in.

>Another factor with direct QSLs to rare locations is the "theft factor". This
>varies by country, of course, but can be very frustrating. Yet another factor
>is that a few stations (some of which are rather well known for the practice)
>simply keep the GSs and never reply. Fortunately there are very few of these.

I've heard this statement almost verbatim from several sources but
never elaborated upon. Who are some of these stations? Believe me, if
I knew I'd post 'em. I'd like to see a running post here and on some
of the QSL reflectors of known QSL deadbeats so maybe those just
getting into the paper-chase could save their GS's and the
less-than-honest DX might realize why their QSO counts are going down
and would help them to "see the light." Or it might clue them into the
fact that their postal authorities are sniffing their mail (if they
didn't already suspect it!)

>Postage costs have gone up in many countries. With a few exceptions, one GS
>still covers it, but just barely.

I usually enclose one GS, but there are some countries that need more
(Germany's postal rates are very high, for example). If it's a
semi-rare one or a truly rare one, I honeslty don't mind tossing in an

extra one from time to time. I don't use IRCs at all any more (unless it's widely known that GS's are a problem). In fact, when I first started QSLing I used IRCs more than GS's and my return was about 40-50%. I did one batch using GSs and it went up to almost 75-80% and I've never looked back. I've never tried using foreign mint samps, but maybe I'll try that next :-) when I go after my 40m DXCC in a couple of years!

Incidentally, when it finally came time to QSL India (where citizens are not allowed to posess foreign currency--are there any others, BTW??) I was lucky enough to work a station that also had a published e-mail address, so I wrote and asked what he'd prefer: GS or IRC. Without hesitation he said a GS would be preferred and that many postal authorities dont' know what to do with IRCs. GS it is, and a QSL magically found its way to me 2 1/2 weeks later!

Here are a couple of tricks I've gleaned through the months that I'll pass along, which might be of help to some newcomers to QSLing and especially to the original poster of this thread. Most of these are old-hat to veteran DXers, but I know I sure could have used these tips when I first got started.

* Put your SAE in upside-down so the flap doesn't accidentally get cut off when the outer envelope is opened.

*If it's going to a hot country or you expect it to be sitting in a hot/humid postal facility for a while, put a piece of wax paper between the flap of the return envelope and the body so it doesn't gum shut. I sometimes use the GS in the place of the wax paper.

* If sending to areas where I suspect the postal folks may be less-than-honest, I bring the envelopes to the Post Office and get a meter sticker instead of using a regular postage stamp--I also use my business name as the return address. When I do use a stamp, I use the most boring, plain-jane stamps I can find. The less interesting the better. I actually had a home postage meter for a 3-month trial that I loved for QSLing, but I couldn't justify the monthly cost for my business. If you intend to QSL everything direct, this may be an option worth investigating.

Also, when sending to areas that are iffy, I will put the QSL inside the return envelope, with just a corner of the GS showing. Yes, it's a bit harder for the DX station to process my request, but it may also make it possible for the envelope to get through to him in the first place.

* I NEVER put a callsign anywhere on the envelope or the return envelope (exception: I got a little rubberstamp made to say 73 de W2IRT that I put under the flap of the return envelope, just in case the foreign manager loses track of whose envelope belongs to which card). Once the envelope is sealed, you can't see the stamp.

* I seal the envelope with clear packing tape, and put the big USPS Air Mail sticker across the tape (so the sticker is on both the flap and the body of the envelope). If it's going to an area of the world where the U.S. isn't held in very high regard (you know what I mean!), I'll cut off the USPS markings and just use the AIR MAIL portion of the sticker. While it doesn't make the envelope tamper-proof, it does make it a little more tamper resistant, so either the envelope will either be stolen outright or left to pass on to the intended recipient unscathed.

Of late, I've used the label features of DX Base to add professional-looking address labels instead of hand-written ones. Again, more for the purpose of getting the card past unscrupulous eyes in foreign post offices.

All that said, I've found that I get a near-perfect return from every manager I've ever dealt with. Direct QSLing to rare and semi-rare ones has also been pretty good, with the average wait between 4 and 8 weeks. The worst offenders are from former USSR entities. I've sent about 10 to Moldova and 3 or 4 each to Turkmenistan, Kaliningrad and Kyrgyzstan (no reply from any of these yet) and it took about 7 or 8 to the Ukraine, Yugoslavia, Romania and Poland to finally get one back--and those actually came through the bureau!! Still nothing from Spain, the Canary Islands (though I've gotten cards from many many managers in Spain--go figure!). Canada was pretty tough, too for some strange reason.

On the other hand, I've had tremendous luck getting QSLs in from Africa and Asia--I'm probably in the mid-to-high 90% return range from these areas. And of course, Japan is the best of all.

My one real pet peeve about direct QSLing, though, is when you send a GS or two for AirMail postage, and you include an Air Mail envelope and the DX station crosses out the Air Mail markings, leaves the back flap open and puts surface postage on it!! Gawd, that's annoying (not as annoying as getting nothg back <grin>) -- or when all I get a postcard back. Fortunately that's only happened once (5H3RK) and the card was fully legible.

Good luck with your new obsession ^W hobby!

Yep, those big name organizations listed on eQSL's web page sure on the cutting edge of technology when it comes to accepting electronic qsl pages. BTW, exactly what award does the Daytona Beach Amateur Radio Association offer that compares with any nationally recognized award? It might be true that the ARRL and CQ awards account for 2% of the 'organizations' issuing awards. Probably less because there are likely more than a hundred folks giving out paper, but the question you fail to address is what percentage of total awards issued (that the typical amateur might recognize by name) come from anyone but CQ and ARRL?

Hello Gary,
I did not issue any directives as to which awards a ham might or might not prefer. I simply replied to the fellow that said eQSL cards were "not good for -any- awards" and "worthless". I then posted a link that shows over 30 organizations that accept eQSL's for Ham Radio operating awards.

The vast overwhelming majority of hams couldn't care less about ARRL - anything. Only a tiny fraction of hams world wide are even ARRL members so only those very few can even apply for (and pay the fee $$$ for) ARRL awards like DXCC, WAS, etc. Over 90% of all the hams on this planet are - NOT - ARRL members and because of that cannot even apply for ARRL awards whether they had so-called "real qsl cards" or electronic qsl cards or stone tablet qsl cards carved by Moses himself because they are not ARRL members.

So..in that light it is clear that ARRL membership and the awards that are for ARRL "members-only" do in fact make up a very tiny sliver of the entire world's Ham radio community.

According to their web page, ARRL membership is not required
for foreign amateurs to apply for DXCC or WAS. I didn't check
the other awards, but I suspect the same is true.

Charles, ol' bean, it's only US hams who have to be ARRl members
in order to apply for ARRL awards. It probably says that some
place on that wonderful site you are always pushing.

Peter,

The "theft factor" mentioned is not theft on the part of the DX station, but theft on the part of the postal service and shipping contractors in some countries. It seems that there are some unscrupulous folks out there who prey on email bound for hams, knowing that the envelopes contain either money or IRCs. Some locations are more prone to theft than others, with a number of Central and South American countries being cited often as locations where the arrival rate of QSL cards is pretty low. I have had several experiences where 1, 2 or even 3 shipments were "diverted" and never got to the Central American ham... a guy I know and do not suspect of any wrongdoing when he tells me via email that he never received the card(s). [yes, I know, another excellent advertisement for eQSL... but I still like/want/need that piece of paper]

One easy step to take with those locations is to avoid any callsign information on the envelope - nothing in the address or return address that would suggest that there is money or an IRC inside. This is of course no guarantee. Another method is to send via registered mail- but that is very expensive and unless it is the confirmation of your 345th country you will probably not want to go that route. ;-(

Wow! I'm new to newsgroups, and this thread tells me there's 98% bickering here and 2% real info (sorta like the ARRL/CQ Awards statistics diatribe). Who cares? If you ask a question here, you'll probably get an answer. If you phrase your question better (i.e., "Who besides ARRL/CQ offers awards that count worthless, piece-of-crap E-QSL's?), then you might not get an answer that sets you off.

Guess what?...everybody is either right or wrong, but it only depends on your perspective.

So far, I don't have any obsessions about this stuff...thankfully.

73, gentlemen,

Dave AA1VX

2210. Problem of reception with long wire

Newsgroup: rec.radio.amateur.dx
Date: 2002-06-06 17:47:01 UTC
From: Thierry Lombry <lombry@excite.com>

Source record: 12836

Hi,

A few questions about antenna for SWL activities in HF bands.

here is the summary :
Old config : At brussels, 4 stairs building, HW-101 + 5m on the external wall up the roof + 2x 20 m coax in V horizontal installed on the roof (i used only the central cu, not ground connected).
I heard all the world including islands. So worked fine.
see qsl at http://www.astrosurf.com/lombry/qsl.htm

New config : suburban Luxembourg (campaign), 3 stairs building, TS-570D + 20 m coax (central wire only used) wandering in the appartement + 5m along the external wall + 2 x 15m parrallel (separation 50 cm) in the garden.
I heard only europe up Scotland, Cyprus, Russie Occ., Tunesia and only one W8 today. I do never heard PY, VK, K, W and other Africa DXCC.
So I'm not really happy of my config.

Difference before, after : type of RTX and wire used.

Where is the probelm now ? It doesn't seem to be a problem of WX even if these days there are much QRM.
The cable inside the house is useless i think so, thin electric cable or coax, i choose the coax to reduce parasits.

Is the problem of low reception (excepting counbtries near with arrive S59+) linked with the kind of long wire used (electric cable in place of coax) ? In its length outside the house the problem (2x 15 m parallel in place of 2x 40m en), probably ?

Can I use a thin pylon of around 10 m high to get a better reception ? Some brands to suggest ? or any other better solution knowing this garden is only around 20m x10m long.

PS. The other solution (I will test) in to move the RTX in Wepion (Namur) on the top of "hills" where I can use a garden over 100 m long. There I think I will heard something...
But in the meantime, how to improve the LX station ?

Thanks in advance for your technical comments.

Thierry

I preffer QSLing via bureau (I'm radio amateur not radio businessman :)
and my suggestion:
You can check who are member of PZK (SP Ham Union)
http://www.pzk.org.pl/cz/wsie.htm

that Ham's probable in most part answered via bureau - opposite SP,SQ
non-members, I suppose ...

The H44A web site is interesting and makes it clear there will be no QSLs any time in the near future. Hope they keep their log book!

2214. Air Mail Envelopes

Newsgroup: rec.radio.amateur.dx
Date: 2002-06-06 20:24:12 UTC
From: Peter Dougherty <ve3thx@nac.net>
Message-ID: <obgvfu80pt8qgs5ltqq9v952dij6cmki69@4ax.com>
Source record: 12840

Hi Folks,

I just found out that the envelopes I've been using for QSL returns (Eaton # 32-634-10) have recently been discontinued and no stock is left. I've tried Staples and Office Max and neither of them sell Air Mail envelopes any more, and apparantly haven't for a few years now.

I use #10 security envelopes to send everything in (I still have about 2000 custom-printed #10s left) and I need to find a new source for # 9 sized security air mail envelopes. I tried the "european" air mailers that Bill Plum sells (got a really good deal on them at Dayton). While they are of good quality, unfortunately they don't fit in my #10 outgoing envelopes and are thus worthless to me.

Anybody have a suggestion as to where I can find the size/type that I need?

Thanks.

Bill Plum sells airmail envelopes where one fits inside the other. Or,
you can just fold in half the ones you've been getting from him.

Well, the problem is, when the DX specifically advises to QSL via
QRZ.COM or his call-book address, and I send the card, return postage
and an SAE, I have a reasonable expectation of getting a card back
direct if mine gets to him directly. If he says he prefers QSLing via
the buro, then fine, I'll send via the bureau and will expect a long
wait. If I send all that stuf direct and he returns the card through
the buro, then I feel it's a little less than honest on his part.

Thanks Barry. Like I said, I've tried the ones Bill sells and they don't fit inside my #10 envelopes that I use to send the card, GS and SAE in--and I'd really rather not fold the return envelope if I don't have to. Anything that makes a bulge in the outgoing envelope is a big red flag to potentially dishonest postal employees in some parts of the world, and I'd rather not attract that kind of attention.

What I have been using up until now worked VERY well, and if I can continue along those lines, I'd love to do so. The general idea is to make my letter to foreign postal people look like a piece of professional business correspondance. I would say this is especially true if the addressee is a well-known ham. Let's say that a dishonest postal employee has intercepted a few GS's from QSLs and he knows that any "friendly correspondance" from the US or other places might well contain a GS or IRC's or whatever. If I make my envelope look like a business letter, it might stand a little bit better chance of getting through. No guarantees, of course, but since every direct card I send is for a new entity or a new band, each one that gets successfully returned to me is significant.

I don't think any method is 100% reliable, but since getting into a good rhythm a few months ago and finding a method that seems to work well, I'm loathe to change it so drastically if there's any other possible alternative.

I've known that one for years :-)

I guess I shouldn't really be on the poor mailman's case *too*
badly--I got Indonesia back this morning and Kenya and the South Cooks
yesterday--all on 15!

I'm really tickled about Kenya, since I really wasn't 100% sure that
I'd got him--copy was very light on his end--but I guess it was just
good enough to get through. One of my best catches ever.

Still holding at 99 entities confirmed on 20, however!! <big grin>

Amateur Radio Newsline™ Report 1294 - May 31 2002

Amateur Radio Newsline report number 1294 with a release date of Friday, May 31st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. An airline pilot playing pirate radio operator finally gets caught and a tank you from the FCC to those who solved an R-F-I case. These stories are first on Amateur Radio Newsline report number 1294 coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT: AIRBORNE UNLICENSED STATION BUSTED

Hams down-under have busted an unlicensed operator who was not only on the air, but also in the air. Rick Wornett, P29KFS, reports from Port Morsby:

--

For many years a non-qualified person has used the callsign P29VS from locations all over Australia. When you find this unlicensed operation extending to aeronautical mobile mode and being used all over Australia, even the most un-informed amateur must start to ask questions.

But no. For years this pirate operation has gone un-reported by VK amateurs, many of whom talked daily with P29VS at either a fixed location in Victoria or aeromobile from various jet routes across Australia. None of these licensed amateurs, supposedly aware of the terms of their license and the limitations of operating with a foreign call, ever queried the use of a P29 call in Australia.

In view of his long and un-challenged operating history, it is only fitting that the pirate should be closed down by P29 amateurs monitoring, providing evidence and insisting that something be done by your ACA.

First heard some years ago while mobile over Western Australia, the callsign was monitored recently and consistently on Tony's net on 14mHz. The P29 radio society queried PNG's administration and was informed that the call had never been issued. In fact this had been determined long ago when an attempt was made to have a PNG license issued. Further work including recordings of callsigns and place names identified the operation as being within Australia. Action taken by the ACA in Victoria has now terminated the operation.

For Amateur Radio Newsline, I'm P29KFS Rick Warnett, IARU chairman P29.
--

The airline that the unlicensed operator works for was not revealed. (Q-News)

**

ENFORCEMENT: A BIG THANK YOU FROM THE FCC

Back on this side of the Pacific, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth is saying thanks to some ham radio operators, some corporations and the ARRL. He says that they all worked together to solve a long standing interference issue in the Cincinnati Ohio area:

--
AUDIO REPORT ONLY: Hear it by downmloadingf the MP3 version at www.arnewsline.org.
--

Hollingsworth says that this was a very complex case and that everyone worked very diligently to resolve it.

**

RADIO RULES: FCC WILL HEAR PETITION FOR REVIEW ON CC&R”S

Lee McVey, W6EM, tells Amateur Radio Newsline that the FCC has decided to consider his Petition for Review of the Dismissal of the ARRL Application for Review of RM-8763 which he filed in January. The Bradenton, Florida ham says that this will offer the Commission to take another look at the CC&R issue now that preemption has also been extended to two-way Internet services. This, because many such services cannot function effectively without an outside antenna.

McVey says that although the regulations only permit opposition comments on his Petition, he would appreciate receiving any and all replies to opposition comments. Send them by e-mail to lee.mcvey@prodigy.net. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-222345A1.doc

RESCUE RADIO: HAMS ON THE FIRE LINES IN NEW MEXICO

Ham radio has been aiding with communications as a wildfire -- dubbed the Borrego fire -- races across the New Mexico highlands. According to Amateur Radio Newsline’s Jay Miller, WA5WHN, in Albuquerque, the 145.19 repeater atop Pajarito Mountain played a key role during evacuations of the towns of Cordova and Truchas. This is the very same repeater used during the fire in Los Alamos.

Jay reports that at one time over 40 members of New Mexico Search & Rescue has been placed on standby for this fire. Almost all are hams with equipped with mobile High Frequency, VHF and UHF voice as well as A-P-R-S capabilities.

Bill Kauffman, W5YEJ, was is the New Mexico Emergency Coordinator. He has been on the 145.19 MHz repeater assisting in communications and logistics. Meantime, Lonnie Scott, AH2AZ, from Santa Fe coordinated efforts at the Emergency Operations Center that was opened in the town of Espanola with Dave Clark, KJ5KG, and Terry Morton, N5XDF, at the Chimayo Elementary School. The evacuation order for Truchas was finally lifted on Thursday May 23rd. (WA5WHN)

**

RESCUE RADIO: ARRL ATLANTIC DIVISION NAMES AWARD WINNERS

Hams from three ARRL Divisions will be honored for their volunteerism following the September 11th 2001 terrorist attacks in New York City and Washington D.C.

According to the ARRL Letter the 2002 Atlantic Division Amateur of the Year Award will be jointly presented to the amateurs of the Maryland-District of Columbia Section, the Western Pennsylvania Section and the ARRL Hudson Division. All three activated their emergency communications systems immediately following the attacks. The Pennsylvania group handled communications where a jet that was highjacked crashed when passengers decided to act against the terrorists.

The Atlantic Division awards committee has also named Bob Arnold, N2JEU, to be recipient of it’s Technical Achievement Award. As previously reported here on Amateur Radio Newsline, Bob Arnold operates the "N2JEU's Web Controlled Shortwave Receivers" from its home in cyberspace at www.ralabs.com/webradio. (ARRL Letter)

**

RADIO RULES: VEC’S TO MEET – YOUR INPUT WANTED

John Creel WB3GXW tells Amateur Radio Newsline that the annual conference of the nations Volunteer Examination Coordinators is scheduled for July 26th in Gettysburg Pennsylvania. This is the annual gathering where the majority of the VEC’ meet with the FCC to discuss the all volunteer testing system and the way it can be improved. (WB3GXW)

**

CONVENTIONS: DAYTON AND THE APRS GANG

APRS was a big hit at the recent Dayton Hamvention and the man who made the mode happen was there to talk about it. A-P-R-S developer Bob Bruninga, WB4APR, talked with Amateur News Weekly’s Jack Parker, W8ISH:

--

The APRS booths at the Dayton Hamvention were always crowded with amateurs seeking new information on the fast growing automatic position reporting system. Bob Bruninga-WB4APR has been refining the technology for more than a

decade. With public service in mind Bruninga says DTMF tones can be used to further expand the APRS system.

Bruninga: “What we are introducing this year is APRs using touch tones. So you can do that with any walkie talkie. So show up at your event and want to report that you are at mile 13 in the marathon you enter a couple of digits and 13 and that tells everybody. The computer will receive and convert that to an APRS position report showing you at mile marker 13.”

At special events, voice nets often become busy. APRS can relieve congestion.

Bruninga: “We hope by having the touch tone capability that everyone out there can enter data. And that keeps traffic off the voice net which could be handled with a couple of key presses.”

Bruninga has the DOS version ready to go. He’s now looking for help on other versions.

Bruninga: “I am writing it in DOS to show people what it can do and am encouraging anybody to write it for a soundcard software because then it’s totally software.”

Newly developed software and the growing popularity of APRS style radios are helping to expand the automatic position reporting system. Bruninga says the marriage of aprs digipeaters and the Internet make it a global communications and information system.

Bruninga: “So, really what aprs is these days is a world wide packet distribution system for real time communications.”

Reporting from the 2002 Dayton Hamvention, this is Jack Parker, W8ISH.

HANDI HAMS: NEW PROMOTIONAL TAPE AVAILABLE

The Courage Hamdi Ham System says that it now has a ham radio tape available to blind members who want to promote amateur radio in the blind community. The presentation covers the basics of what ham radio is and why it is a fun and useful activity. The tape is free to Handi Ham members for the asking. For more information contact Handi Ham director Pat Tice by e-mail to wa0tda@arrl.net. To get on the text-only Handi Ham Newsletter distribution list send and e-mail to handiham-request@cs.vassar.edu. In the subject line simply put the word “subscribe.” (Handi Hams)

**

RADIO RULES: PART 15 AMENDED TO PROMOTE THE DEVELOPMENT OF HIGH SPEED WIRELESS DEVICES

Turning to regulatory matters, the FCC has amended its rules to promote new digital transmission technologies for high-speed wireless communications. Specifically, the Commission has modified Part 15 of its rules to permit new digital transmission technologies to operate in the 902 to 928 MHz, 2400 to 2483.5 MHz and 5725 to 5850 MHz bands.

(DO NOT READ: The complete document is on the FCC website at fcc.gov/edocs_public/attachmatch/DOC-222567A1.doc (Tnx CGC Communicator))

**

RADIO RULES: TV "CARS BAND" TO BE SHARED

The FCC has also adopted a Report and Order that has expanded the eligibility for licenses in the Cable Television Relay or CARS service to all Multichannel Video Programming Distributors. Now, Private Cable Operators, Direct Broadcast Satellite Operators, Open Video Systems, and others who provide multiple channels of video programming can join Cable Television Systems and Wireless Cable Systems in using CARS microwave frequencies to support their video programming distribution needs. This one can be found at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-222569A1.doc (CGC Communicator)

SCIENCE NEWS: PERIODIC EARTHQUAKES DETECTED BY RADIO GPS

Turning to the radio science page. Were you aware that once every 14 months or so, portions of coastal British Columbia and northwestern Washington State experience an ultra-slow ground motion? Or, that if released all at once, this motion would generate an earthquake measuring more than 6 on the Richter scale?

Well that's what data from a network of G-P-S equipment spanning the region show, say scientists who presented their findings in the April meeting of the Seismological Society of America, held in Victoria, British Columbia.
Thankfully, these "silent earthquakes" are so slow that no one notices them, and no structural damage occurs.
More information is on the web at http://www.sciencenews.org/20020427/fob4ref.asp (CGC Communicator)

**

SPACE AND SCIENCE: AQUASAT LAUNCHED

NASA's Aqua spacecraft, which will orbit the Earth for six years and use a JPL-managed package to collect water cycle data has been launched from Vanderberg Air Force Base in California. The 6,248-pound spacecraft was lifted into space on board a Boeing Delta II rocket. The satellite is equipped with

JPL's Atmospheric Infrared Sounder instrument and will provide scientists with information on changes in ocean circulation, global precipitation and how clouds and surface water processes affect the Earth's climate. (ANS)

**

INTERNATIONAL-UK: HAM RADIO WILL HELP CELEBRATE QUEEN ELIZABETH’S GOLDEN JUBILEE

United Kingdom Amateur Radio operators will help to celebrate Queen Elizabeth's golden jubilee. Jeramy Boot, G4NJH, has more:

--
Commencing next Saturday the 1st of June, the Scarborough Special Events Group will be on the air for 30 days as GQ0OOO to commemorate the Queen's Golden Jubilee. Activity will be on all HF bands, two metres and 70 centimetres, using SSB, CW and PSK31. A special full-colour souvenir QSL will be issued to mark the occasion. Cards may be sent via the bureau or direct to club call G0OOO. Jeramy Boot, G4NJH

--

But that’s not all. According to the R-S-G-B, all U-K amateurs will be permitted to use the G-Q prefix " during the month of June to commemorate the Queen Elizabeth's accession to the royal throne. (GB2RS)

**

SPECIAL EVENT STATIONS: AM ON THE AIR FROM HAMCOM

If you are one of those hams who still gets a thrill when you hear full carrier A-M transmissions, listen up. This one is for you.

Bob Peters, K1J, reports that Chapter 207 of the Quarter Century Wireless Association is sponsoring an A-M special event station. This, at the HAMCOM convention in Arlington, Texas on June 7 and 8.

Peters says that station W-5-A will be located in the commercial exhibits area and will operate on 3.880 MHz and 7.290 daily from early morning until about 5 P-M both days. He says that anyone attending HAMCOM is welcome to drop by and operate. If you can’t but do make contact on the air, a joint Q-C-W-A and HAMCOM QSL will be available for an S-A-S-E. Follow the Q-S-L directions given on the air.

Again that’s station W-5-A on A-M from the Arlington Convention Center June 7 and 8. (QCWA)

**

ON THE AIR: VHF/UHF REPEATER QSO PARTY

Bob McHugh, N4BM, says that the Wichita Amateur Radio Club in Kansas is trying something new. At least new to the United States. It is an operating event in the form of a VHF and UHF Repeater QSO Party which has already met with great success down-under.

According to McHugh, the rationale behind the repeater QSO Party is to get newer hams and more experienced hams on the air at the same time and in the same place. This, to exchange ideas and operation techniques.

McHugh sent along a copy of the rules for the event. We have no way to list them here but if this idea interests you, contact him by e-mail to n4bm@arrl.net (N4BM)

**

DX

In D-X, VK8HA says that the war in Afghanistan may have removed an irritant from the air. According to Henry, when the first bunkerbuster bombs were dropped near Kabul, a rather strong signal on 14.180 appears to have been blown off the air. And V-U-2-U-R adds that that a broadcast station on 7.085 MHz also went off the air at the same time. This leads to speculation that the two transmitters were at the same location.

A lot higher in frequency, there is a new 432.300 Mhz CW beacon now in operation near Sausalito, California. It signs the call K-6-E-R and runs 2 watts into a horizontally polarized antenna. The K-6-E-R Beacon is located in grid square C-M 87 at 1125 feet above sea level.

Lastly, word that G-4-H-C-L who was due to travel to Yemen, on Wednesday the 22nd of May, has postponed his trip. This, due to illness in his family. G-B-2-R-S reports that he was slated to operate from Yemen as 7-O-1-C-L. (From various DX sources)

**

THAT FINAL ITEM: HAM RADIO LICENSING IN ZL

And finally this week, we take another look at the new simplified path to becoming a ham radio operator in New Zealand. We take another look through the eyes of Q-News Graham Kemp, V-K-4-B-B:

--

In ZL from October 2001 there were only two grades of amateur radio licence, Limited and General. In the early 1990's, the New Zealand administration devolved the examining and testing for the Amateur Radio Examination to NZART, the New Zealand Association of Radio Transmitters (Inc.)

The examination paper has 60 multiple-choice questions taken from a 600-question public-domain question-bank. Seventy of the 600 questions are devoted to the Radio Regulations, twenty to the Frequency bands and ten to the Q-code. The remaining five hundred are about electronics, radio communications and operating. The results are given before the candidate leaves the examination site.

--

Kind of sounds a bit like the way we in the United States have been testing candidates since the introduction of the all volunteer testing scheme, well over a decade ago. (Q-News)

==========

Amateur Radio Newsline report number 1295 with a release date of Friday, June 7th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Kids Day is coming and a legend leaves Top Band. These stories are first on Amateur Radio Newsline report number 1295 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: KIDS DAY COMING JUNE 15TH

It’s possibly one of the two mot important ham radio days of the year, and its only a week away. We are talking about the second of two Kids Day operating events held every year. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the story of the event and the man who made it happen:

--

The next Kids Day is June 15 from 1800 to 2400 UTC. Thats Saturday here in the United States. Most of the activity is on 20, 15 and 10 meters, but you can also put kids on the air on your local repeater if you wish.

Kids Day is not a contest. In fact, it is a non structured event where all you have to do is to call C-Q Kids Day, and then put the youngsters visiting you on

the air to talk with other kids visiting other hams. Once the children are talking,the suggested contact exchange might include the youngsters names, their ages, their location and -- for the younger ones -- favorite color. Best of all you can work the same station over and over again if the operator continues to change.

If this all sounds like a great way to spend a day, you might be interested in learning ewhere Kids Day came from. In reality is the story of vision by one man. A man who long before most relized a problem even existed.

It was Larry “Tree” Tyree, N6TR, who recognized that ham radio had no future without a steady influx of new, young hams. Kid hams filled with the wonderment of childhood. That thirst we are all born with to “learn.” To “experiment.” To find out how this or that “really works.”

But Tree Tyree did not just sit there and say let somebody do something. Working woith Oregon’s Boaring Amateur Radio Club, he went out and did it himself. And in creating Kids Day, N-6-T-R, probably established the most important “ham radio holiday” that we have.

“Kids Day.” Just think what it really means. It two days every year where we “grown-up” hams open our hearts, minds and stations to the young. We invite them in. We put them before a mic or key. We put them on the air to experience first hand the “magic” of radio. Then we silently pray they some of them will knock on the door again and say: “...can we talk on the radio again?” When that happens, we know that ham radio’s survival is insured for yet another generation.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

The first Kid's Day event was held on December 2, 1994 but it was, N6TR, who took “Kids Day” from a dream to a twice yearly reality now sponsored by the A-R-R-L. And in doing so Larry “Tree” Tyree N6TR figuratively “paid the premium” on the life insurance policy that is Amateur Radio. (ARRL, ARNewsline™, W6AQ)

**

RESCUE RADIO: NEW MEXICO WILDFIRE EMERGENCY FOLLOW-UP

More this week on the role that Amateur Radio operators in New Mexico played as a wildfires raged in that state. As reported last week, hams were called out as soon as the fire emergency was declared. Now, the ARRL Letter provides some in depth follow-up.

The Letter says that on May 23rd, an incident command post was set up in the town of Espanola in response to a so-called "sleeper fire.” This is a lightning-caused fire that smolders before bursting into flame.

This one erupted near the village of Truchas in north-central New Mexico. Over the Memorial Day weekend, more than 250 residents were evacuated from their homes in Truchas and the nearby village of Cordoba.

Rio Arriba County Emergency Communications Manager Lonie Scott, AH2AZ, activated amateur communications support. Amateurs were dispatched to Red Cross shelters set up at two elementary schools in Chimayo, and The Los Alamos Amateur Radio Club's W5PDO system provided support.

By late on May 24, the wind had shifted. The fire was burning away from Truchas. Residents were able to return home starting at 9 AM the next day. New Mexico Section Emergency Coordinator Bill Kauffman, W5YEJ said the incident command post and the shelters closed later that day after all evacuees had returned home.

As of May 29th the fire was still burning in the Pecos Wilderness area of the Santa Fe National Forest, but was not considered a threat to any homes or structures. But as tinder-dry conditions persist across the South-West, amateurs remain on alert in case more wildfires break out. (ARRL)

**

ENFORCEMENT: PIRATE BROADCASTER BUSTED IN PUERTO RICO

Turning to the regulatory arena, the Federal Communications Commission has announced that an investigation by the it’s Enforcement Bureau has led to the seizure of unlicensed broadcast radio equipment allegedly operated by Amil Lugo-González.

The station had been operating on 99.5 MHz from Jayuya, Puerto Rico. The FCC San Juan Office, working in conjunction with the United States Marshals Service and the Office of the United States Attorney for the District of Puerto Rico, seized the equipment on May 21st. The FCC says that on more than one occasion it had issued notices to Lugo-González directing him to cease operation of the unlicensed station. (FCC)

**

ENFORCEMENT: SHORT TERM RENEWALS GRANTED

Meanwhile, two radio amateurs have been given short term renewals of their Amateur Radio licenses. The FCC’s Riley Hollingsworth tells us who they are and the reason each is getting a shortened license term:

--
Hollingsworth: : “A short term of an upgrade to Extra class was given by the Wireless Bureau to Sam Jacobs, K3SAM. The grant was short term due to previous problems involving the filing of a club call sign application.

And, a short term renewal was given to Peter Figuroa, N6IWH, of Berkeley California. Figuroa had been on the Amateur Bands after theexpiration of his license but there were some extenuating circumstances.”

--

In both instances, two year license renewals were granted. If there are no other enforcement issues with either Jacobs or Figuroa over the next two years, each can apply for a full 10 year license renewal in 2004. (FCC, RAIN)

**

CHANGING OF THE GUARD: THE 160 METER GATEWAY NET GOES QRT

A longtime fixture on Top Band has gone silent. This as Vern Jackson, WA0RCR, announces that he has terminated operation of his famed 160 meter Gateway Net. Here is the announcement as Jackson himself made it:

--
AUDIO ONLY REPORT: HEAR IT AT WWW.ARNEWSLINE.ORG
--

Over the almost quarter of a century that it existed, Jackson's net presented some of the top news and information sources in ham radio. This includes Hap Holly's Radio Amateur Information Network and Amateur Radio Newsline, all in high fidelity A-M. (WA0RCR)

**

THE VEC SYSTEM: NEW TECHNICIAN SYLLABUS RELEASED

The Question Pool Committee of the National Conference of Volunteer Examination Coordinators has released the revised Technician Class Element 2 Syllabus into the public domain. This syllabus will be used to develop the new question pool for Technician Examinations going into service on July 1st, 2003. All amateurs are encouraged to submit candidate questions to the Question Pool Committee by this coming September 15th.

Now before you sit down to dream up new questions there are some strict guidelines that must be followed. All proposed questions must be no more than 210 characters in length. This includes all spaces and punctuation. All answers and distracters no more than 140 characters including spaces and punctuation and you must identify both the syllabus area and the correct answer. Also, if the question is rule based, identify the exact reference in the Part 97 Amateur Service rules.

Candidate questions should be sent via e-mail to QPC@arrl.org. The complete syllabus will be posted to the ARRL website within the next few days. (W4WW, NCVEC)

**

REGULATORY: JOINT U.S.- MEXICO COMMISSION MEETING CONCLUDED

Call it radio regulation on an international level. This with an announcement that the FCC's Enforcement Bureau recently took part in the 26th formal meeting of a regulatory body known as the Joint United States and Mexican Commission.

The Joint Commission, formerly known as the Mixed Commission is made up of representatives from the United States and Mexico.
The latest meeting took place in Mexico City during the week of April 22nd. During the gathering the group reviewed 115 cases of harmful radio interference in the United States and Mexican border zone. Of these, 47 were officially closed. A report is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-1063A1.doc (CGC Communicator)

**

REGULATORY NEWS: FDA WEB AGE ON RADIO FREQUENCY HAZARD FROM CELL PHONES

The Food and Drug Administration and the Federal Communications Commission have established a joint web page called "Cell Phone Facts." This, in an effort to provide reasoned answers to the public's never ending health and safety questions concerning the radio frequency power produced by portable cellular and PCS phones, and their base stations. The site is in cyberspace at www.fda.gov/cellphones (FDA, FCC)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held September 13th to the 15th in Denver, Colorado.

The annual conference proceedings are published by the ARRL. Presentation at the conference is not required for publication. Submission of papers is due by August 5th. Conference registration details and updates, along with more information are in cyberspace available at www.tapr.org/dcc (TAPR, ARRL, ANS)

**

HONORS: CQ MAGAZINE ADDS TO HALLS OF FAME

Forty-four new members have been added to the CQ Amateur Radio Hall of Fame, while the CQ Contest Hall of Fame and the CQ DX Hall of Fame each grew by one member. This, with OZ1LO being honored by his fellow contesters and W0AR being recognized for his accomplishments in DX’ing. The announcements were made at the recent Dayton Hamvention. A complete list of winners is in cyberspace at www.cq-amateur-radio.com in the “announcements” area. (CQ)

**

EMERGING TECHNOLOGY: THE NEW E-MAC

Apple Computer has unveiled a new line of computers exclusively for educators and students. Apple says the new e-Mac will feature 17-inch monitors and high speed G4 processors. The e Mac is slightly smaller than the iMac and includes stereo speakers and a CD-recordable drive. The price for the new e-Mac machines will begin at 999 dollars. (Appple press release)

**

HAM RADIO IN SPACE: BOY BAND MEMBER MAY NOT MAKE IT TO SPACE

Possible problems for a boy-band member who wants to fly in space. The latest news reports quote the Russian Space Agency as saying it has no contract in hand to carry 'N Sync's Lance Bass to the International Space Station.

As previously reported here on Amateur Radio Newsline, Bass has made public his wish to visit the I-S-S. He has already made a trip to Russia to undergo medical tests in preparation for a seat on an upcoming flight.

As of airtime, its not known if Bass has been approached regarding his getting an Amateur Radio license and taking to the ham radio airwaves if he does get to make the trip. (Published reports)

**

INTERNATIONAL – CANADA: NEW RAC CANADA DAY CONTEST MANAGER

Radio Amateurs of Canada Contest Manager Joe Mac Pherson, VE1CH, has announced that the Moncton Seniors Amateur Radio Club has taken over responsibility for the management of the R-A-C Canada Day contest. This, effective immediately. Mac Pherson says that all inquiries or electronic logs related to the R-A-C Canada Day Contest should be directed to ve9qed@rac.ca. Non-electronic logs, for the RAC Canada Day contest should be mailed to the Moncton Seniors Amateur Radio Club at Post Office Box 73, Moncton, New Brunswick, Canada. The postal code is E1C 8R9.

**

INTERNATIONAL - GIBRALTER: RESTRUCTURING AND A NRE LICENSE CLASS

License restructuring is coming to Gibralter. Peter Naish, VK2BPN in Australia has been advised by Wilfred Guerrero that Gibraltar will be introducing the New Foundation Licence by mid-June. Guerrero, who is the Secretary of Gibralter Amateur Radio Society says that the new llicense will be similar to the highly successful Foundation License recently put in place in the United Kingdom. The prefix to be used will be ZB3. (Q-News)

**

DX

The 6 meter D-X season seems to be here. Jay Kesterson, K0GU in Colorado reports over the VHF Reflector on some very early season E skip openings to Europe. Jay notes that on June 4th at 15:14 UTC he heard the EN19 beacon. He then checked for European video signals and was surprised to hear many of them on and near 49.750 MHz. Jay says that some were S 9 plus 20 d-b. He then worked SM3UZS at 15:50 U-T-C followed by OH7PI at 16:45. (VHF Reflector)

Still with 6 meter D-X news, word that St. Paul Island should be on the air late June 29th through July 9th. According to Herb Spoonts, W3IWU, the operation will feature a full time, dedicated six meter station operated by W7XU, N0QJM, W0SD and W0OE. Herb says that the six meter station will only transmit on 50.157 MHz listening up 5 kHz and more when needed. Liaison will be on 28.885 MHz and updates will be provided to the appropriate Six Meter Internet sites and reflectors. St. Paul Island holds the prefix CY and is located in Grid Square will be FN97. QSL via W7XU. (Via E-Mail)

On the High Frequency bands, GB2RS reports that JH0IEW/JD1 and JE0EHE/JD1 will be active from Ogasawara Island through the 16th of June. They will be operating on 80 through six meters, including the WARC bands on SSB and CW. QSL to home calls or via the bureau. (GB2RS)

Also, keep an ear open for W5AA slash TI8 from Costa Rica until the 17th of June. He will operate on all bands with an emphasis on 30, 12 and 17 meters. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: ATOMIC COFFEE MAKER

And finally this week, if you are a ham who has trouble waking up to keep those wee hours D-X schedules, the answer may be as close as the local appliance store. How about an atomic time coffee maker?

No, we aren’t kidding. We discovered this one last week in an appliance store in the Ft. Lauderdale Florida area. It’s called the Perfect Time Coffeemaker, and according to its manufacturer Melitta Salton Inc, it’s the first such device using radio frequency reception of atomic clock signals to keep it in sync with the National Bureau of Standards time keeping system.

Melitta Salton claims that the internal clock provides accurate time right out of the box by monitoring the WWVB broadcasts from Boulder Colorado. All the user need do is to select his or her time zone and the coffeemaker does the rest. It even automatically adjusts to Daylight Savings Time and its internal back-up batteries keep it going during short duration power losses. Salton also says that it also brews good coffee. And what more could any D-X hound ever ask for. (ARNewsline/4)

Worked two stations on PSK31 this week that I can't find any QSL info for.
Have checked the usual places, Buckmaster, WM7D, QRZ, etc.

Worked ZP6EUN on 10 meters. I know ZP is Paraguay, but that's about it.

Also worked XM3AHZ on 20m. Fellow said he was in Ottawa, and the station was
a special event for the Queen's Jubilee.

Any help would be appreciated.

Thanks and 73's,

Robert / N4IXT

>in every countries you'll find strange peoples; unfortunatelly...
>and therefore sometimes better send via bureau, less risk

Less risk but a LOT more wait. While some on this newsgroup see QSLs and awards and nothing but worthless paper and boxes of postcards, I happen to enjoy the award hunt personally, and I don't want to wait from 6 to 24 months for a card from a new (to me) country to arrive. I enjoy the wait for the mailman most of the time--I FINALLY got #100 for 20 metres this morning!!--and preparing the cards, etc.

For contacts in a country that I already have confirmed then I use the bureau almost every time. I just generally prefer to use the direct method if I work a new country or a new band/mode, etc.

>BTW: are SP station DX for US hams ?

Well, last time I looked, Warszaw's about 4200 miles away from me, so it sure isn't local! That said, I think many hams (especially those on the East coast) do not consider it *rare* DX, as there are always many, many SP hams on when the bands are open--much in the same way as G's, F's, I's, S5's and YU's. DX, but fairly common.

>>BTW: are SP station DX for US hams ?

As a very general rule, US and Canadian hams consider any station outside the USA and Canada to be DX. That includes places like XE, FP5, CO, C6A that are actually closer than other USA and Canadian places that we *don't* consider to be DX. I know when I call "CQ DX" I will happily accept calls from stations in any country in Europe. (I'd much rather hear from YA, YI, or P5 though<grin>!)

KH6 and KL7 are also generally considered DX even though they're (politically) part of the USA.

yes, I know;

about relations between SP & W,VE - right now I mean not about DX_long
distance,
but: are SP's rare (difficult confirmed) stations?
in Poland lives over 17000 hams, over 3200 are Union (PZK) members,
activity on the air - during contests, outside contests ... not bad,
so, big chance to get QSL, I supposed

me too, but 1A, 3A, HV, OJ0, T7, SY, HB0, C3, 4U1 (every less 1500 km
from my QTH), even border UA2 - looks like european DX's :) for SP
station

Hi All

Listening last night to many contesters - the exchange included Signal Report and a Serial Number. Is the serial number a unique number assigned to the QSO by each party, based on the next number in sequence? A search on some of the contest rules sites indicate a code meaning various parameters. So now I am indeed confused.

Any comments would be appreciated. Thanks in advance.

> to the QSO by each party, based on the next number in sequence?

In a word, yes. Each QSO is assigned a serial number, beginning
with 001 and going through in sequence until the contest ends.

So, if you work someone who gives you a 5-9 1001, that means
that you were QSO/contact number one thousand and one for that
particular contest. It also means that he has been going at it for a while.

Adding things such as serial numbers to the contest exchange is just
a way to add interest and content to a contest QSO, Different contests
require different exchanges.

For example, the upcoming field day exchange includes the signal report,
the number of transmitters on your site, your operating class, and your ARRL
section. ARRL contests seem to require that more real data is exchanged.
Part of the scoring involves checking submitted logs for accuracy of the
data
submitted, a task that has been made much easier with the Cabrillo log
format.

Stefano,

You will want to go to rec.radio.cb and ask your
question.

This is rec.radio.AMATEUR.dx

Amateur radio operators do not use 11 meters anymore,
since it has been allocated to CB operations.

Even if regulations in Italy allow 11 meter DX, this is not
the right newsgroup for your inquiry.

Ciao!

Hi Gary

Thanks for the info. Based on your excellent info, I guess its prudent to check the contest rules before answering a CQ in order to know the proper exchange. It appeared that many were answering CQs that were not intending to submit a log - simply working the station to help them obtain credit. Is this correct and more importantly, proper. I would sure hate to mess up someones contest effort.

Ed,

The exchanges vary for each contest, but most want you to exchange a signal report (RST) and an incrementing serial number. However it is best to check out the contest rules - the ANARTS RTTY contest this weekend, for example, wants RST, TIME, and CQ zone.

My favorite place to check on the Internet is WA7BMN's "This Week's Contests" page:

http://www.hornucopia.com/contestcal/weeklycont.html

Gives a review of every contest each weekend, the most basic rules (start time, stop time, bands, exchanges, etc) and a link to the contest organizer's home page and rules. Very handy...

Yes, it is perfectly OK to help them get an extra point. And it is
perfectly OK to follow up with a QSL card if you want a confirmation for
some purpose like DXCC etc.

I hope they spend more time on SSB that OJ0U did this weekend. I think they only worked 15 phone for about 3 hours on Saturday (didn't get on HF Sunday so not sure). Didn't hear them on 20 at all. I saw a few spots on 10 as well, but never heard them. In fact, SSB-DX was almost non-existant this weekend.

>73 Gary

Not only is is correct and proper, it's mandatory. If people who were
not participating in contests (not sending in logs) never called the
people who were, most contesters would fall asleep after a few hours.

They all appreciate you calling even if you aren't going to send in a
log......

There are not many weekends that don't have a contest going on,
and different contests have different exchange formats - some are
RST and serial number, some are RST and zone, some are RST
and ARRL section, some are RST and power output, some are
RST and county, some are RST and state, etc.

Check the contest section at http://www.ac6v.com and you can
find a half dozen different contest calendar web sites, where you
can usually figure out what's going on before you get involved.

When in doubt, just call. The other station will tell you what he
needs for an exchange.

If in doubt, listen to a few QSOs to get a feel for how the contest
information is sent (called the "exchange"). Most are pretty simple,
the exception being ARRL sweepstakes (which has a 5-part exchange,
including the callsign). The participants will be willing to "talk you
through" any omissions, so there's no need to be nervous.

This is especially true later on in the contest (Sunday), when things
are going more slowly than in the first hectic hours of the contest.
Sunday is the best time for the casual operator who wants to dabble
around, pick up a few DXCC countries, etc.

A consistent top-ten finisher once told me to never apologize about
being a part-time entrant with a weak signal. He pointed out that QSOs
with the casual operators are the difference between the top stations.
In other words, they need to work you!

From: coaa@mail.telepac.pt
Message-ID: <828d82ed.0206100727.545884cf@posting.google.com>
Source record: 12890

Version 1.2 of BeaconSee, the propagation monitoring software, is now available.

www.coaa.co.uk/beaconsee.htm

Included in the latest version is the option to save propagation graphics as a JPEG image.

BeaconSee monitors propagation conditions from your QTH using off-air reception of the NCDXF/IARU HF beacon network via a soundcard.

BeaconSee can be download and used free of charge. A few features require registration. Existing registrants will need a new registration number for the new version but there is no charge if yo have already registered.

Sorry, ZP6EUN is no member of the Radio Club Paraguayo, so he
is unknown. Can be a new one, or a misunderstanding or a fake.
Which frequency exactly? The newcomers with the C-license are
only allowed to work 28.700MHz to 29.200MHz in PY.

Kind Regards, Eike

A real basic idea, set yourself up an Excel spreadsheet or Access database
to keep up with it. Easy to sort and print out.

DX Atlas 2.0 allows you to manually select a grid square (at two
levels: 2-letter and 4-character) as either worked or confirmed.

DX Atlas is one of the best pieces of amateur radio software I've ever
used, and in addition to grid square logging will allow you to track
propagation with 10 different variables (including MUF, F2 Critical
Frequency, D;layer absorption, etc), see azimuthal and cartesian views
of the earth showing gray-line (civil, twilight or astronomical), a
great-circle plotter to give you bearing and distance and a whole slew
of features too numerous to include here.

I just bought it about a month ago, and I wish I'd had it for a lot
longer. The propagation maps and grid squares are along worth the
price of admission (pretty inexpensive--$29.95 if I recall).

In addition, it works with many of the big logging programs (I use it
with DX Base). All I have to do is enter a callsign or click on a
cluster DX spot and I can see the exact location of the station pop up
instantly (if the DX has a grid locator in my CD-ROM--I use
Buckmaster). I can see it resolved right down to the 6-characted grid
square (FN30aq)!

It has a trial period as well to see if it's for you.

No, you're quite modern. For thousands of years before paper and pencil
people carved into rocks and made dye from plants and inked their
writings onto cave walls. Of course that would be silly to do nowadays
since better methods are available.

It was at 28.120, which isn't in the range you mentioned, so I doubt he was
new. I guess either the call sign came thru wrong, or it's a fake. Thanks
for checking,

Most contests require the exchange of the call signs and some sort of
"meaningful" information. Each contest has its own
criteria for what that information should be. It doesn't really make
any difference, just that an agreed upon bit of information is passed.
It is purely arbitrary.

Just what is the "real" ham radio?

I have quite a few friends that do not intend to upgrade past "Tech".
They operate on 1240. Does this mean that they are not "real" hams?

(And yes, I am an Extra, long before the change)

Hi Jason,

I just exchanged e-mails with Said a few days ago, and the
su1sk@amsat.org address is indeed valid. In fact, the day after I sent
my inquiry, his QSL showed up in the mail! Perfect timing--almost.

If you're inquiring about a pending card, don't worry--I got mine 2
days ago from a QSO several months back, so I suspect that it'll be
there soon.

Congrats on a good DX catch. He's the only SU I've heard or seen
spotted in the last 8 months.

The great thing about ham radio is the cooperative effort.
Putting 2 & 2 together, if this aspiring station trained their apprentices
& assigned QSL tasks and became very active they would soon find that hams
would respond to the equipment requests. Putting out a notice that QSL's
are NOT going to
be sent is like cutting off your hand to spite your face.
There are operations to H4 and H40 from time to time by
EU operators who are happy to exchange QSL cards.

Good Luck DXing,
K

Amateur Radio Newsline™ Report 1296 - June 14 2002

Amateur Radio Newsline report number 1296 with a release date of Friday, June 14th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Venezuela says no to W-R-C 2003 and the international conference is looking for a new home. This story is first on Amateur Radio Newsline report number 1296 coming your way right now.

(Billboard Cart Here)

**
RADIO LAW: WRC-03 LOOKING FOR A NEW HOME

The venue of the next World Radiocommunications Conference has become uncertain. This, after Venezuela withdraws an invitation to the International Telecommunications Union to host the conference. Amateur Radio Newsline's Bill Pasternak, WA6ITF, tells us the impact this decision may have on Amateur Radio:
--
According to an ARRL Bulletin, the conference had been scheduled to be held in Caracas next June and July. Whether it can be held on the scheduled dates in some other location is not yet known. This is because the planning for a conference of this size and scope generally takes two or three years.

There are a number of issues of importance to hams are on the agenda. These include reaching agreement on separate allocations for Amateur Radio and broadcasting in the the 7 MHz band along with the possible revision of Article S-25 of the International Radio Regulations. Also to be taken under advisement is the issue of whether to retain the treaty requirement to demonstrate Morse code proficiency for access to amateur bands below 30 MHz.

But all of this may have to wait if the I-T-U cannot find a new host and find one quickly. And that could be a rather problematic at best.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.
--

The International Telecommunications Union did have an option on conference space in Geneva, but that expired before Venezuela decided to cancel. The Venezuelan National Commission of Telecommunications cited ongoing economic concerns for its decision to walk away from hosting the meeting. (Adapted from ARRL Bulletin)

RESCUE RADIO: THE COLORADO HAYMAN FIRE AND HAM RADIO

A 90,000 acre wildfire called Hayman -- the largest wildfire in Colorado's history -- is blazing just outside Denver. Firefighters, supported by many volunteers including ham radio communicators moved into position ahead of the flames Wednesday June 12th. They are setting backfires to try to block the fire's path toward the city's southwestern suburbs.

According to news reports, the Hayman fire was sparked by a campfire in the Pike National Forest southwest of Denver. It has been growing in intensity and slowly moving to the north-east. The blaze now covers close to 145 square miles. So far it has destroyed 21 homes and immediately threatens another 2,500.

Earlier, evacuations had been ordered in the town of Sedelia and in the Tarryall area in Park County. Tarryall is on the fire's northwestern edge. Colorado has also put out a call for additional fire-fighting crews from across the nation to be sent to the area. About 540 firefighters were working on the fires, and 800 more were requested.

Amateur Radio is playing a vital role in the overall fire control effort. According to Jay Miller, W-A-5-W-H-N in Albuquerque, quite a bit of support communications is taking place over the Mega Link repeater that interties the entire region. And health and welfare nets are operational on both 40 and 75 meter SSB in addition to VHF F-M. It is a very fluid situation and net frequencies vary with location and time of day. (WA5WHN, ARNewsline™)

**

RESCUE RADIO: THE COLORADO IRON MOUNTAIN FIRE FIRE AND HAM RADIO

The Hayman fire comes on the heels of last weeks Iron Mountain Fire. more than 1000 residents were evacuated near Canon City. At least 200 structures were destroyed. According to the ARRL, members of Fremont County ARES staffed a Red Cross shelter set up to serve the evacuated residents in nearby Cotopaxi. They also helped to staff the incident command post and the Deer Mountain Fire Station. Also, hams from Pikes Peak ARES staffed the Red Cross headquarters in Colorado
Springs. More on this story as news is made available. (Adapted from ARRL Bulletin)

**

ENFORCEMENT: TWO MORE PIRATE BUST

Two unlicensed broadcasters are are off the air and feeling the FCC's sting. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the details from New York:

--
In the first case the agency has issued a monetary forfeiture -- better known as a fine -- a forfeiture in the amount of $10,000 to Thomas A. Brothers of Detroit Michigan. Brothers was cited for willfully and repeatedly violating Section 301 of the Communications Act of 1934 involving operating an FM station on 88.3 MHz without a Commission license.

Also being ordered to pay $10,000 for operating an unlicensed broadcast station is the Revrend Doctor Phillius Nicholas of Brooklyn New York. Dr.

Nicholas is also acused of operating a station in the FM broadcast band without a license to do so. He too was found to have violated the same section of the Communications Act.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

Neither Brothers or Nicholas responded to initial Notices of Violation. Both have been given thirty days to pay the fines imposed by the FCC. (FCC)

THE WORLD: MISSIONARY KILLED IN THE PHILIPPINES WAS A HAM

Some sad news to report. A ham radio operator and missionary taken captive by Muslim extremists in the Philippines died during a rescue attempt on Friday June 7th.

Martin Burnham, KC0DNB, and his wife Gracia were among three Americans abducted by the Abu Sayyaf guerrillas in May of 2001 from a resort off Palawan island in the southwest Philippines. Martin Burnham was killed during the fire-fight to rescue them. Gracia Burnham suffered a would to her leg but was otherwise unharmed. A Filipino nurse held hostage by the same rebels was also killed during the rescue attempt.

The Abu Sayyaf rebels have been linked to Osama bin Laden's al-Qaeda terrorist network by United States intelligence sources. Four rebels were killed while Philippine troops suffered seven wounded. U.S. military advisors training Filipino troops in jungle warfare were not involved in the rescue attempt.

The Burnhams, from Rose Hills Kansas, were married for 19 years and had lived in the Philippines since 1986. Martin Burnham, KC0DNB, was a pilot for New Tribes Missions, flying other missionaries and supplies throughout the region.

(CQ, ARNewsline™)

**

ENFORCEMENT: FCC TELLS UTILITY TO CLEAN UP INTERFERENCE TO HAM RADIO

Yet another utility company has been told by the FCC to solve an interference problem to a local ham. This as the agency's Consumer Information and Government Affairs Bureau issues a letter to Reliant Energy Corporation of Houston Texas requesting that it work with a local amateur operator named Ed Gerber, W5GCX, to resolve an ongoing powerline interference problem. (FCC)

**

ENFORCEMENT: EX-HAM BACK IN JAIL FOR PAROLE VIOLATION

A former ham is back in jail. This with word that Jack Gerritson, the ex-KG6IRO of Los Angeles will be spending the next three years in prison for violating parole on an earlier conviction involving malicious interference to emergency service communications.

As previously reported, Gerritson was arrested and convicted in 1999 for radio interference to the Los Angeles Police Department. On November 14, 2001, Gerritson's ham radio license and KG6IRO call sign were set aside by the FCC.

Gerritson was freed from prison on probation after serving one year of a five year term. After his release, the FCC says that he continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area. So this past January 29th, Los Angeles FCC agents participated in a pre-dawn arrest of Gerritson. His arrest came in direct response to complaints of death threats allegedly made by Gerritson on a 2-Meter Amateur Service frequency. (FCC)

**

RADIO LAW: FCC DISMISSES DISH ANTENNA CHALLENGES

The FCC has dismissed several petitions for reconsideration of it's 1996 direct broadcast satellite antenna Report and Order. In the order, the Commission had preempted local regulations that imposed restrictions affecting the installation, use and maintenance of satellite earth station antennas one meter or less in any area or two meters or less in commercial or industrial areas.
Nine petitions for reconsideration of the 1996 Report and Order were filed. Then, in October of 2001, the FCC's International Bureau released a public notice asking parties to refresh the record regarding petitions for reconsideration of the Antenna Report and Order.
In the public notice, the Bureau noted that, since the release of the order, many of the issues raised in the petitions for reconsideration may have become moot or irrelevant in light of intervening events. No petitioner filed in response to this public notice. The FCC has now dismissed those petitions on the grounds none have not indicated an intent to pursue their respective appeal. (FCC)
**

RADIO REGULATIONS: MICROWAVE RADOMES PROPOSED FOR LOCAL FOREST SERVICE SITES

The CGC Communicator reports that the Forest Service is proposing to require radome covers on all microwave dishes that are installed on Forest Service land in the state of California. The service says that this action is necessary to protect the California Condor from perching on the horizontal feed horns of the dishes and becoming microwave baked. The decision comes in the wake of an environmental lawsuit brought by conservationists. (CGC Communicator)

**

CONTESTS: CQ WW VHF WEEKEND

Changing gears, word this year's CQ World Wide VHF Contest will be held the third weekend in July. Operations commence at 1800 U-T-C on July 20 and ending at 2100 U-T-C on July 21, 2002.

Please note that this date is one week later than in past years. The change comes in response to numerous requests by the participants and potential participants. The old date was in direct conflict with the I-A-R-U contest and the World Radiosports Team Championship games. It also occurred only one week after the European Field Day. Complete rules can be found in .pdf format at
http://www.cq-amateur-radio.com/VHFRUl02.pdf (W3ZZ)

**

AWARDS: KB2YAA NAMED BY PIONEER RADIO OPERATOR SOCIETY

And congratulations go out to Gary Tillinghast, KB2YAA, of Springville New York. This, on his being named as the Pioneer Radio Operator Society Amateur of the Year. KB2YAA is an active member of the Handi Ham System which made public the news that he had received this prestigious honor. (Handi Hams)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

REGULATORY: ARE YOU ELECTROSENSITIVE?

Are you ectrosensitive? That is, are you one of those people who is unusually sensitive to radio frequency fields?

Well a group called the Cellular Phone Taskforce thinks that some people are. It also believes that the FCC should not allow certain RF telemetry equipment in health care facilities. The Taskforce's holds the opinion that these R-F fields will have what it calls the "unwanted, illegal and unconstitutional effect of depriving electrically sensitive persons of access to health care.

Well, it turns out that the electrosensitivity issue was considered by the FCC some time ago in E-T Docket 95 dash 177. After giving it consideration, it was dismissed. More information can be found at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-02-135A1.doc (FCC)

**

EMERGING TECHNOLOGY: FLYING THE INTERNET

Three airlines -- American, Delta and United say they will offer high-speed Internet connections on some long-distance U.S. flights beginning this summer.

The connections will cost around $20 an hour and offer e-mail, access to the Web, and live television broadcasts. The airlines say that they hoped to eventually expand the service to most of their domestic and international flights. Passengers would have to bring their own laptop computers. (Computer Daily)

**

SPACE AND SCIENCE: HAMS SET NEW SPACE ENDURANCE RECORD

Two American ham radio operators have broken NASA's space endurance record of 188 days and four hours. But astronaut Dan Bursch, KD5PNU, declined a playful suggestion from Mission Control that he might want to go for the 438-day world record.

Bursch's fellow space-traveler, Carl Walz, KC5TIE, was with him in the space station and the shuttle and shares the endurance record. The two astronauts broke the record while in bed, ready for some shut-eye. The old U.S. record was set by Shannon Lucid in 1996 aboard Russia's now de-orbited Mir station. (NASA)

**

SPACE TECHNOLOGY: JPL TAKES COMMAND OF FRENCH SATELLITE

The Jet Propulsion Laboratory in Pasadena California is now handling command sequences for a weather satellite the French launched in December. Over the next six months, data from Jason I will be dissected by JPL's team of scientists, who will study interactions of the world's oceans and atmosphere and observe events like El Nino.

Until now, Jason I has been under the guidance of the French Centre National d'Etudes Spatiales. With the handover, JPL will be responsible for sending command sequences to the spacecraft. The French agency will continue to perform navigation and engineering tasks. (NASA)

**

INTERNATIONAL - U.K.: HAM RADIO HELPS CELEBRATE QUEEN ELIZABETH'S GOLDEN JUBILEE

On the international scene, Amateur Radio was front and center with a commemorative station near Windsor Castle when Britain's Queen Elizabeth celebrated her recent Golden Jubileee. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--
As of 1530UTC on Tuesday the 4th, GB50 had made in excess of 14,000 contacts, putting them within reach of meeting their own target of 20,000 QSOs during the operation. More importantly, over 2000 members of the public had visited the station and 'Amateur Radio Experience' exhibition by Tuesday afternoon, the majority learning about amateur radio and the Foundation Licence scheme for the first time.

Also on Tuesday, no fewer than 41 members of the public were able to send greetings messages from the GB50 station, giving them a real 'hands-on' experience of amateur radio.

Jeramy Boot, G4NJH
--

The GB50 station closed down operations at 21:00 UTC on Sunday, June 9th. (RSGB)

**

INTERNATIONAL - SOUTH AFRICA: A LICENSING RECORD

South Africa has set a new licensing record. This as the results of that nations May 2002 Radio Amateur Examinations or R-A-E are announced. Q-News Graham Kemp, VK4BB, reports:

--
Results of the May 2002 Radio Amateur Examinations are published in record time. The results of the RAE, held in South Africa, written 23 May, were announced on 30 May. Each candidate who passed the examination and had completed a license application form has also been issued with a callsign.

95 of the 113 candidates who wrote the examination were successful. The highest marks were achieved by Dr G A Keen of Cape Town, 100% in both the papers.

The youngest candidate to pass the class A examination is 15 year old Q D Du Preez of Durban who now boasts with the callsign ZR5QD. The oldest to pass, 72 year old C H Stevens of George who now boasts ZR1AWG.

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

The South African licensing program is considered to be one of the most progressive to be found anywhere in the world. (Q-News, SARL)

**

DX

In DX, G0TQJ, is currently in Afghanistan and operating portable Y-A. He reports he has openings to Europe on 10 meters around 13:00 UTC. Chris is using a Yaesu FT-890 transceiver running 100 watts to an 80 to 10 meter Windom antenna 50 feet high. He is active on SSB and RTTY. QSL to his home call. (GB2RS)

And OZ7SM will be active from Bornholm through June 16th. Most of the operation will be on SSB on all bands including 6 meters. Bornholm counts as EU-030 for the Islands on the Air awards program. (GB2RS)

**

THAT FINAL ITEM: ITS AN ENIGMA NO MORE

And finally this week, we have reported before on Germany's World War Two top-secret Enigma spy machine. This was the message encoding device that gave Germany the ability to keep its military movements secret during much of the conflict. Now, it appears as if a British woman actually cracked a major component of the Enigma before World War Two began, but her supervisors dismissed her theory as too simple. Bruce Tennant, K6PZW, picks up the story:

--
British newspapers have printed excerpts from the new publication titled "Action This Day." The book claims that discoveries made by a female codebreaker known only as "Mrs. BB" that could have opened the secrets of the encoding machine much earlier and shortened the war.

In the late 1930's the Enigma was dubbed the key to Germany's military communications system. Codebreakers including Alan Turing, the father of the modern computer, were trying in the late 1930s to break the Enigma cipher, but they could not work out how the keys of the Enigma machine were wired.

The book's editors, Michael Smith and Ralph Erskine, say that "Mrs BB" suggested the Germans wired the A key to the A rotor, B to B and so on through the alphabet. This theory dismissed as too simplistic, but was later proven to be correct.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles
--

The full Enigma code was finally cracked by a team of thousands of men and women, including chess masters, civil servants and mathematics geniuses. (Published news reports)

A friend of my mom's served in Korea during that war, and
was a radio op there. He says that there was a high level
of QRN (natural noise) on HF there. He though there was
something peculiar about the Earth's magnetic field or something.

Or were we artificially generating the QRN to make it hard for
the enemy to communicate?

Currently 4 cards per dollar. I've used Les' service for years and
overall am pleased with results. There are a few managers who won't
respond to him, and he pretty knows who they are and will send those
cards back to you. His site at http://www.qsl.net/wf5e/ (first hit on
Google when you enter WF5E)

You're kidding! You can do that? <GRIN>

On this subject, a modest proposal:

We have CW DXCC, Phone DXCC, Mixed DXCC, Single-Band DXCC, Satellite
DXCC, RTTY DXCC, Five-Band DXCC, Henry 8K DXCC, also known as the
Honor Roll, and now QRP DXCC (did I miss any).

How about the "I Found 'em and Worked 'em All By Myself DXCC" which
could be called the "Single-Hand DXCC". Applicants would have to
swear that the only VHF-UHF radios in the shack are in the EME station
and there is no Internet connection. Endorsements would be available
for those that use even a single piece of equipment they personally
designed and built.

Hi,

I am considering buying a second hand Paragon, FT-990 or TS-940SAT. I hear that all are pretty good second hand radios.

Which is the best second hand radio for RTTY, SSB and CW DXing??

The 940 was a great radio when it worked. After a few years the connections gave many all kinds of grief.

Ten Tec is an excellent company, I 'd go with them although I prefer an Omni the Paragon isn't bad if you get a good price. You can check the Ten Tec site, they sell used stuff I believe.

***I have been using the 940SAT for about 7 years. No complaints.
Great receiver. Excellent sensitivity and selectivity. I tried two
mikes; the Heil DX boom and the D104. Believe it or not the DX stations
said the 104 cut through the QRM much better than the Heil. I had
previously used the 104 with the TS830s and received the same reports.
Good Luck

My vote is for the FT-990...my only radio (and also bought "second-hand").

With P5 about to be credited to my total, that's 340 countries mixed RTTY (using FSK mode on the radio), CW and SSB....with the majority of them worked on the FT-990. I would say it works pretty well.

Your mileage may vary...but it is a great rig.

Thanks for your comments. Yes I hear that the older TS940 had problems wirth cold solder joints. It is best to buy a newer one (serial number 8 mil and higher).

Here are my thoughts so far... Any comments?

For RTTY, the TS940 seems to have a great PA rated for 100 percent duty cycle for over one hour. The Paragon has also a pretty solid PA for RTTY (20 minutes full power without a fan) The FT990's PA is not great. Only rated for 3 minutes RTTY transmit. You must reduce the power.

(If you want to run PSK31, PACTOR II etc, the FT990 and Paragon are likely better than the TS940 since you can use the narrow filters in SSB mode).

For SSB, I think the TS940 and FT990 are pretty close in performance with their very low IMD and great RF clipping speech processors. But the FT990 does allow you to select between standard and narrow SSB filters. The Ts940 does not. The Paragon has poorer IMD and I understand that it uses inferior audio speech compression to keep costs down.

For CW, I hear the Paragon is best wirth its great QSK. I suspect that the TS-940 and FT-990 are similar in performance with the TS-940 probably being slightly better for full QSK CW.

Its going to be a tough choice. I will have to make some compromises.

I never used a Paragon or '940.

I did, however, like my FT-990 very much, especially for the
flexibility on digital modes.

There are 2 rear panel jacks - RTTY, PACKET.

The RTTY jack allows FSK operation.

The PACKET jack allows AFSK operation whether for packet, Clover,
Pactor-II, or any of the many, many newer designer modes.

The mode selection on the front panel (RTTY, PKT) selects which
jack is used.

Also, installed filters may be selected as desired and used in
the digital modes.

Hello Rob,
Let's get to the bottom line in an answer to your question. Since you asked in the vein of operating modes / preferences I just want to say that realistically there is not going to be much difference in your ability to do successful RTTY, SSB and CW with either of those rigs. And furthermore IMHO - any - rig that is working properly will give about the same results the only assumption of course is that the rig has the mode in it that you want to use and compare to others.

A TS-430 is going to allow you to do those modes as well on-the-air as an FT-1000D overall and in 99% of the real-world situations. I have always felt there was far too much hoopla about rigs when basically any properly operating rig will more than "get the job done".

What does matter and what is meaningful and what does and can make an overwhelming difference in those modes you mentioned? 3 things...

1. operating skill
2. operating skill
3. operating skill

IMHO it is 90% operating skill and 10% equipment. Ask any QRP'er!!

I too would go with the FT 990...much better reciever , in my opinion, though a 940 is might fine and less money.. could cost you on a repair though, lots of parts unavailable thru normal channels....Paragon loaded with filters and Giehl chip is pretty nice but I wouldnt trade a 990 for one...2 more cents worth...best deal on the planet right now woudl be a Yaesu FT 920 or an Icom 746, 920 should be 900bux the 746 not over a thousand....for the money Id rather have either of those...why not take adavantage of the new technology and low prices!! Less repair on newer rigs, 746 has been virtually trouble free after first runs and same for the 920...whoops I gave you 10cents worth..73 Murray

Since you like the FT990 for digital modes, perhaps you can answer a
question.

My current-production KAM98 TNC ignores the RTTY and PACKET jacks on
my FT990 in favor of SPEAKER, MIC & PTT. Do I miss out on some
functionality because of this? Or, rather, do those data jacks
reflect how TNC's worked in 1995, which TNC's are now obsolete?

As to IF filtering, I have a complete set of three Inrads and find
they all can be engaged in almost every mode, especially CW and SSB.

I've used a TenTec Omni, a TS-930 and TS-850 during the past 17 years.
So far my favorite of those 3 is the 850 with 500 Hz filter.
(I mostly DX on CW).
Liked the feel of the tuning knob on the 930 best.

And the other three most important:

1. Practice.
2. Practice.
3. Practice.

Get to know your radio very very well :-)

To the point you don't think "push split, push a=b, push spot, find clear spot"
but instead think "look up 2 KHz for clear spot" and fingers automatically
make it happen without engaging brain ;-)

I came very close to picking up a 2nd 850 recently ... had trouble
turning it down for less than $600 ... keep in mind the earlier production
(very early production) had problems with components in the ALC chain.
Look for later serials, or proof the repair has already been done.

Hello Hank,
I agree 100%. I've had over 6 years to get comfortable with my
TS450S/AT and am so at home with it now there really is no operating
scenario that stifles me. As an example - numerous times when DX
stations have gone from simplex to spilt I have frequently been the
first station he worked after going split because it takes me about 2
seconds to switch the TS450

So..your advice of "practicing" is quite right and can be a real
advantage.....

2331. Question for any QSL Managers Out There...

Newsgroup: rec.radio.amateur.dx
Date: 2002-06-19 00:09:44 UTC
From: Bob Lombardi <blombardi@cfl42.rr.com>
Message-ID: <3D0FCCA5.2070702@cfl42.rr.com>
Source record: 12707

Opinions, please.

My wife and I both DX, but never together (only one antenna, after all). So after one of us works a station, they typically tell the other one who then goes and enters the pileup. We each have to work them by ourselves, never with a "listen for my friend...".

Question, though, is whether it's okay to put both cards in the envelope for the station with one SAE. The only extra work for the manager is to put both outgoing cards in one envelope. Is that too much hassle? If they do one envelope at a time, it seems like not much extra work. But if they have some sort of batch system, I don't know.

We've been trying it, and have had some returns (with both in one envelope) but I'd like the opinions of any DX QSL managers. The real answer should be to ask them, but it's hard to ask a station during a frenzied pileup.

73,
Bob & Pam
W4ATM & KB4EWG

If you wish to use email, there are no numbers in my address, least of all the answer to life, the universe and everything...

>>Question, though, is whether it's okay to put both cards in the envelope
>>for the station with one SAE. The only extra work for the manager is to
>>put both outgoing cards in one envelope. Is that too much hassle?

I don't see why it should be any hassle at all. Make sure to write
out your own cards - it always looks suspicious to me to see cards
from two hams in the same town, with QSOs a minute or two apart,
and the same handwriting.

In some cases you know that one person made more than one QSO. I
remember getting an envelope with 4 cards from UA9s in different
cities, all about the same time, but all 1 hour off - in that case
I think someone made all the QSOs with different callsigns. And
what to do about two 6m QSOs one minute apart from family members
who live in different states and send their cards together?

Perhaps if the card is a very valuable one you can consider sending
separate cards, but for the ordinary stuff, put 'em both in the same
envelope, it actually saves the manager time, not having to open and
seal separate envelopes.

2338. How propagate HF waves ?

Newsgroup: rec.radio.amateur.dx
Date: 2002-06-20 23:54:47 UTC
From: lombry@excite.com
Message-ID: <2ce1325e.0206201554.329d6b75@posting.google.com>
Source record: 12714

Hi,

I request the attention of a specialist es-ionosphere to answer some beocian questions about propagation in HF bands.
I kown some things about the ionosphere and the sun influence. Check on http://www.astrosurf.com/lombry/qsl.htm (from June 21, 08h00z, not before)

When we told there is propagation (in HF or even VHF bands), what do we mean exactly : that E-D-F layers of the ionosphere are all actives and well denses ? Or this term is more generic and includes other atmospheric (ionospheric) states ?

When we told there is no propagation in HF bands (the one interesting me being mainly 14, 18, 15 MHz) - as it was probably the case on last june 16-18 in Europe, what happens exactly ? What ionospheric layer is affected (if they are) and what HF band is concerned (how to know that without listening to the concerned band that became very quite with very few QSO), due to what kind of phenomenon (solar eruption, CME, etc) ?

In case of bad or low propagation (obviously local), in what cases must we go in the upper frequencies (18-28 Mhz) or going down to 7, 3.5 or 1.8 MHz if I am working on 14 MHz ? Impossible to know and the answer is in propa forecasts or does it exists a system to determine this value empirically (other than listening bands in search of traffic). So a radioamateur can he determine this propagation from empirical data (i.e - can be false : High here or aurora there thus no propa to such country, etc) ?

Excepting for a fool, is there a good reason to keep using this band temporary in trouble (the propa being relatively a local problem and probably never a worldwide one).

This problem of propagation does it also occurs as soon as the sun rises on the horizon (I.e. on morning one should shift from 14 mhz to 18 or 21 Mhz) to reach other OM/YL also on the illuminated side of the earth. Is this always true (we admit that propagation in similar in all HF bands) ?

From what variable(s) are the forecasts of propagation established (probably not only from the sunspot index and the electronic density of the different layers of the ionosphere) ?
Where to find find Internet websites dispkaing on realtime or near such forecasts or bulletins (in text mode, 2D or 3D) for all hours of the day and all HF bands (or even more complete) ?

To listen to an EA or an UA do S.W. necessary propagate vthrough the ionosphere (90-200 or 500 km aloft at daytime) or is there another path possible, excepting direct waves (i don't speak about short/long path) ?

About that, up to what distance propagate directs HF waves (theoretically they can go around all the world). But is this distance depending of the frequency (probably too, i.e they reach a different maximum distance on 3.5 and on 14 or 28 Mhz), or depending from the elevation of the antenna and the power of the TX (probably too), other factors ?

At last, what factors influence propagation (I think to the sun presence, its height above the horizon (winter-summer), the presence of aurores (or solar eruptions and CME creating blackouts), presence of powerful High over the country, etc) ? Can you give me more detail ?

Do you have some information about this matter or do you know Internet website (amateur or pro) discussing these subjects (ionosphere, propa). Even books (vulgarisation) very complete ?

Thanks in advance.

Steve:

Worked him on Oct 5, 2001 and got the QSL card on Mar 25, 2002.

I sent via Z32AU also, and no problem... Also sent two greenstamps.

I am a 100% CW operator (OK, well 99.5%) and curently use a Bencher twin paddle connected to the keyer in my rig.

I want to purchase a seperate keyer unit to a) use with my contest software so that the PC LPT1 output can be connected in parallel with the keyer output and b) I use a Kenwood TS50 for holiday operations which does not have an inbuilt keyer.

The have reduced my options down to purchsing either the Samson ETM9C keyer unit or the MFJ-422X.
The former has built in paddles, the latter can make us of my exisiting Bencher paddle by sliding over the top of it to form a single unit (thats how the pictures look any way!)

Bearing in mind that I intend to travel with the selected unit - do any of you guys out there have experience of these units? I'd be interested in comments. (also, I would like to see a 'tune' position on the selected keyer).

Thanks. 73 de John, G4IRN.

John,
I've used quite a few keyers over the years and my favotire is the
CMOS Super Keyer 3. It was written up in QST a few years ago. I built
mine (two actually), and put it in a box 3Lx2.5OWx2H (inches). It's
microprocessor controlled, and has every feature you could imagine,
including plenty of memory for buffers. It's also available
preassembled. Check out:
http://www.idiompress.com/
73,
Barry W2UP
P.S. Just a satisfied user, no affiliation with the mfr.

Dunno about the MFJ unit you cite above. But I can tell you something which may be relevant here as well as a at a point in the future when you may decide you want to play the TNC game portably as well, perhaps! The issue focus on how the "weight" function is implemented in various TNC's and even built-in rig keyers!

In looking at the various TNC's for use with my fixed station, way back when, I discovered that only one manufacturer back then actually seemed to know enough about CW to get the "weight" function straight. Well, I didn't check the PSK-31 stuff, I'll admit, but of the TNC's like it, the MFJ was the ONLY one which actually treats weight correctly. Everything else those long years ago, was calling "weight" what is actually the "ratio" deal! That when the TNC is used with a keyboard and computer program to generate CW from your rig!

Actually, even the rig manufacturer's sometimes get this confused as well. For example, my older FT-1000 also considers "weight" to be what "ratio" should be and actually has no provision for setting the actual "weight" function. Pity; the older FT-1000 sure needs that if you are going after full QSK, I assure you. I have no idea if Yaesu ever fixed that in the later versions of the FT-1000 and so on, or perhaps even in a later firmware revision for the older FT-1000. They may have, to be fair to everyone about this issue.

At any rate, I all those years ago, the MFJ-1278 for that exact reason as my TNC of choice for the fixed station.. It was the only way I could "fudge" and get really usable QSK out of the FT-1000 back then. Should you decide to go further into integrated station control via the computer route, and not go to a dedicated keyboard and so on, you might want to consider focusing on the MFJ product, just to keep the final mix more one-company focused. That, of course, if doing it also gets you where you want to go on other fronts. In my case, I completely wrote my own custom control program for the MFJ-1278 for integrated station control and CW bulletin sending purposes. That ability to handle the actual "weight" setting for the FT-1000 was really the only way I ever got the deal done with it and the really lousy leading edge action of it on full QSK.

You wouldn't ever need to worry about this with a Ten-TEC or Icom 781, for example. But not every rig has really good leading edge treatment for QSK. If yours doesn't, be SURE you can really adjust the "weight" with whatever unit you chose as a keyer!

Just a thought for you and whomever else might benefit from this.

Hey Pappy, I think they changed the rules.... If you already are a
general, then you already passed 13 wpm. And the requirement
for Extra is now 5 wpm. So just round up that six or seven bucks
and go take the WRITTEN test, and tell them they owe you
a refund for the extra 8 wpm CW you already tested for.......

I'll second that keyer. Of all the keyers I've bought or built, this is by far the nicest one. I built mine from a kit. It also has no on/off switch, runs off of few AA batteries, and I think I've been using the same batteries for about five or six years.....

The Samson keyer model ETM9COG-X3 contains the same chip and works exactly the same as the Superkeyer (and Logikeyer). This particular Samson keyer is a neat, fully built and boxed unit, for use with an external paddle. Available from G3TUX the UK distributor. I am pleased with mine.

If you now tell John, that the aforementioned keyer is identical to the electronicx used in the Samson ETM 9 keyer, he might even find an answer to his question in your comments.

FWIW, I have used the same keyer for the past 15 years and it is splendid. It has the tune button you are looking for, has adjustable weight, memories, various keyer emulations, auto spacing and various other stuff that makes the ETM 9 (or Logikey, or Super Keyer, all the same) the top choice for the demanding CW OP.

2366. Why Asia Stations call CQ NA.

Newsgroup: rec.radio.amateur.dx
Date: 2002-06-24 22:22:49 UTC
From: thompson@mindspring.com
Message-ID: <af85t0naq1@slb7.atl.mindspring.net>
Source record: 12742

I noticed several mentions from European Stations as to why BQ9P or YA5T often call for North America
only. Its simple...they are trying to work NA when the band is open. The opening from NA to either is much shorter and usually weaker. Its sort of like NA working LU or CE...YA to G3 is about the same path.

So if you can hear YA5T or BQ9P for 12 hours a day and NA only hears those areas for an hour or so
(depending on band) the reason for calling NA should be clear. Same for KH4 calling for EU only.
All that is asked is that if the Dx calls for a certain area don't work others or the pile up will get out of hand. This has happened several times recently!

Hello everyone,

the 24th June 2002 Update of the ON6DP QSL-Manager Database is ready for download:

http://www.dd3kf.de

NEW - NEW - NEW - NEW - NEW:

The new version of QSL_CONV from Salo, PE1IYR, is added to the download page. You can use this programme to convert the QSL.TXT to QSL.FUL and QSL.FUL to QSL.TXT. Please see the enclosed documentation file. To run this programme you need two additional files in your WINXXX/system folder. You will find links for downloading this files. This new service is only available via http://www.dd3kf.de .

Alternative download via:

http://home.nexgo.de/dd3kf/on6dp.htm

If you want to reply to me please use only (!) the mail link on my home page (the e-mail address in this mail is a spam trap).

I have an ADS RDX-1187 Cadet radio ISA card with the Phillips SAA6579T chip.
I would like to interface between the chip and my computer. Does anyone
know how to do this with this ISA radio card? Any help or instructions are
much appreciated!

Are you looking for something else than what is available at:
http://www.adstech.com/support/downloads/applications/applications.asp?os=Windows&product_id=RDX-1187

There's Win95 and DOS SW and I have seen also a SDK available somewhere.

t. Arto

Amateur Radio Newsline Report 1297 - June 21 2002

==========

A NOTE TO THOSE WHO ONLY READ AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the spoken word. It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1296 with a release date of Friday, June 21st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams down-under face tough new human exposure to R-F regulations and the FCC creates a new Spectrum Policy Taskforce. These stories are first on Amateur Radio Newsline report number 1297 coming your way right now.

(Billboard Cart Here)

**

REGULATORY: VK HAMS FACE NEW MANDATORY RF EXPOSURE LIMITS

Hams in Australia are about to face some of the toughest electromagnetic exposure regulation found anywhere in the world. The idea is to protect people from R-F. Q-News Graham Kemp, VK4BB, has the details:

--
All Australian radio amateurs will be required to know about new Electromagnetic Radiation or EMR controls which are expected to be included in amateur station license conditions from 1 July, 2002. Compliance Level 1 applies to transmitters that are covered by either of these conditions:

(a) The total average power fed to all antennas at the site must not exceed 100 watts and antennas must be out of reach.

(b) The bottom of the lowest antenna must be at least 10 meters above ground and the average EIRP does not exceed 3200 watts.

Compliance Level 2 requires measurements and documented proof of compliance, applies to all other transmitters.

EMR in licence conditions It is proposed that the new regulatory framework, to be reflected in the Licence Condition Determinations -- LCDs -- for the Amateur Service and to all apparatus license will begin on 1 July, 2002. That means that amateur stations operated under new amateur license issued on or after that date, must comply with the framework.

From Q-News Australia, Im Graham Kemp. VK4BB, reporting for the Amateur Radio Newsline.

--

And what about current Australian licensees? They will have until October 1st to bring their stations into compliance with the new R-F exposure rules. (Q-News)

**

REGULATORY: FCC INVITES COMMENTS ON NEW HAM BAND PROPOSAL

Back on this side of the Pacific our FCC is seeking public comments on a proposal to create two new amateur bands and to upgrade the Amateur Service to that of primary user in the vicinity of 2.4 GHz. An ARRL Bulletin says that if the proposal is approved, amateurs would gain a new, secondary, US-only High Frequency allocation at 5.25 to 5.40 MHz and a new Low Frequency spectral parcel from 135.7 to 137.8 kHz.

The 5 MHz band would be the first new HF allocation since the early 1980s, when amateurs got 30, 17 and 12 meters. The Low Frequency band would be the first ever for US hams. And most important for the long-term future of ham radio U-H-F exploration, the proposal will also elevate Amateur Radio from secondary to primary status in the 2400 to 2402 MHz band.

All of this is contained in a Notice of Proposed Rule Making titled ET Docket 02-98 adopted May 2nd by the FCC. Comments are due July 29, and reply comments are due no later than August 12th. Interested parties can file using the FCC's Electronic Comment Filing System. That U-R-L is http://www.fcc.gov/e-file/ecfs.html . Click on ''Search for Filed Comments'' and enter ''02-98'' in the ''Proceeding'' field. (ARRL)

**

REGULATORY: FCC CREATES SPECTRUM POLICY TASK FORCE

Ham radio is not the only area where the FCC has been active in looking at spectrum usage. In fact the agency has announced the creation of a Spectrum Policy Task Force or S.P.T.F. to tackle the problems arising from an increasing demand for spectrum.

The task force is headed by Dr. Paul Kolodzy. Dr. Kolodzy is the Senior Spectrum Policy Advisor for the FCCs Office of Engineering and Technology.

The rest of the committee will be made up of attorneys, economists and even engineers. Its not known whether or not a representative of Amateur Radio or any other personal radio service such as FRS, CB or the new Multi-Use Radio Service will be invited on.

You can find out the complete at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-223142A1.doc (FCC)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Catalina Amateur Radio Association repeater serving the Pacific coastline of Southern California.

(5 sec pause here)

**

REGULATORY: WRC 2003 IS ON AGAIN

The on again and off again 2003 World Radiocommunications conference appears to be on again. According to news reports, the conference which was canceled by Venezuelas telecommunications bureau has been moved to Geneva Switzerland. The dates are the same -- July and August of 2003. The future of mandatory Morse code testing in the Amateur Radio Service is one of the items on the agenda for that meeting. (Published reports)

**

REGULATORY: FCC SAYS NO TO MANDATORY EMP STANDARDS

The FCC has dismissed a petition for rule making that would have required all electronic equipment under its jurisdiction to be shielded against electromagnetic pulse or E-M-P damage. Amateur Radio Newslines Henry Feinberg, K2SSQ, has more:

--

The petition, filed last fall by Don Schellhardt and Nickolas Leggett, N3NL was put on public notice in December and designated as RM-10330. According to the ARRL Letter the proposals would have applied to both new and existing equipment falling within the FCCs purview. And yes: It would have included some Amateur Radio equipment.

Schellhardt is a Connecticut attorney. Leggett is a Washington, D.C. technical consultant. In 1986 the two filed a similar petition with the FCC seeking a Notice of Inquiry on possible shielding of electronics against EMP. They say the September 11th terrorist attacks motivated them to approach the FCC on the topic once again. Once again, the FCC did not agree.

For the Amateur Radio Newsline, Im Henry Feinberg, K2SSQ.
--

The ARRL did not comment on the proposal but fourteen others did. And they were almost unanimous in asking that the petition be dismissed. (ARRL)

**

REGULATORY: FCC-NCVEC MEETING AGENDA ANNOUNCED

The National Conference of Volunteer Examination Coordinators has released the agenda for its annual meeting with the FCC. Among the topics to be discussed are the effect of restructuring on Amateur Radio testing, a report on the status of testing in sparsely populated areas and the status of regulatory and enforcement matters. The gathering is slated for Friday, July 26th in Gettysburg Pennsylvania. (NCVEC)

**

ENFORCEMENT: FINE ISSUED TO BROADCASTER FOR ALLEGED LANGUAGE VIOLATION

The FCC has issued a notice of forfeiture to Infinity Broadcasting Incorporated in the amount of $21,000. The agency says that it is imposing the fine after it concluded that Infinity is apparently liable for the penalty for willfully and repeatedly broadcasting indecent language on three occasions. Infinity is expected to appeal the forfeiture order. (FCC)

**

ENFORCEMENT: FLIPPO IS TRIED IN WEST PALM BEACH

A non-ham who allegedly jammed ham radio communications has been convicted in West Palm Beach Florida on charges of operating a radio transmitter without a license. We have this report.

--
A federal jury in Florida took less than two hours to convict a Jupiter Farms man of broadcasting without a license and maliciously jamming ham radio operations in northern Palm Beach County. According to the Palm Beach Post, 60 year old William Flippo sat with head bowed and eyes closed as court deputy James Caldwell read out eight counts of "guilty."

But getting to this verdict took years of investigation by local hams and the FCC along with a trial that lasted 6 1/2 days. It was described by the newspaper as an often bizarre trial that included testimony about mysterious jamming devices found in trees, strange events going back to Hurricane Andrew and a forged letter that surfaced at the last minute.

Flippos conviction caps years of conflict between him and the Jupiter-Tequesta Repeater Group. This is a 70-member Amateur Radio club whose members claimed that Flippo had jammed their transmissions and had made threats against them.

So club members complained to the Federal Communications Commission. An FCC Engineer involved in the investigation testified that he had tracked the interference to Flippo's home and two of his vehicles. Club members said that the interference stopped when Flippo was arrested in July 2000.

By way of defense, Flippo maintained that most of the radio equipment found in his home, in three of his vehicles and filling a 24-by-24-foot building behind

his house belonged to other people. He also asserted that some of it was given to him by Palm Beach County for emergency use after Hurricane Andrew in 1992 and other gear was part of a vintage radio collection.

Flippo also claimed to have a letter, written in 1994 by the emergency coordinator for amateur radio operators in Palm Beach County, authorizing him to test his emergency equipment daily. But the alleged author of the letter, Charles Mulligan, testified that it was a forgery. Mulligan believed it was created from a 1992 letter to Flippo dealing with events surrounding Hurricane Andrew.

And this is where it got even stranger. Halfway through the trial, U.S. District Judge Daniel Hurley took the extraordinary step of revoking Flippos bail. This, even though the charges were all misdemeanors. Hurley ordered Flippo into custody, saying that the defendant was trying to sabotage the trial by feigning illness. Flippo had checked into a hospital, claiming symptoms of a stroke, which delayed the trial for two days.

After the verdict, Judge Hurley ordered Flippo to remain in custody until sentencing and to undergo psychological testing. The judge said he was deeply concerned about the escalating cycle of violence in the case. He singled out an incident in which Flippo rammed into a vehicle owned by club member Ed Petzolt, K1LNC. The judge also questioned whether Flippo had perjured himself by repeatedly denying he ever used amateur radio frequencies.

When he is sentenced, Flippo faces a maximum of 8 years in a Federal prison and an $80,000 fine. This is in addition to an earlier 20,000 fine levied against him back in 1999 for unlicensed operation and other violations of the FCCs rules.

For the Amateur Radio Newsline, Im Don Wilbanks, KC5MFA. Norm.

--

More on the Flippo case in future amateur Radio Newsline reports. (Palm Beach Post, Miami Sun, numerous others.)

**

HAM RADIO POLITICS: I LINK VS. ECHOLINK ROUND 1

Politics appears to be starting to play a part Internet based radio linking. According to Lee Williams, N3APP, a ham considered as being the father of i-Link named Graeme Barnes, M0SCH, has locked out all users running the EchoLink software from his servers. Also, i-Link users have had to download new software to stay on-line.

To counter the eviction, EchoLink proponent Jonathan Taylor, K1RFD, has set up new servers to allow users of that software to have connectivity. At least for those who want it.

Williams says that Barnes and Taylor are cooperating on the connectivity issue but caught in the middle are thousands of hams who do not care which program is in their computer. All they want to do is to talk to one another and they

really do not care whose server system their signal is routed through. (N3APP)

**

HAM RADIO POLITICS: ELECTION TIME AT THE NFCC-NFCB

Its election time at the National Frequency Coordinators Council or NFCC. Nominations to fill the seats of expiring National Frequency Coordinators Board Directors opened on June 15th. The closing date for candidate nomination is June 30th., with voting beginning on July 28th. and the election results announced on July 31st. The directors elected this time shall take office effective on the 1st. of September and will serve for two years. The incumbent directors whose terms expire on August 31st are Dave Baughn, KX4I, Dick Isely, W9GIG and Owen Wormser, K6LEW. (ARNewsline)

**

CONVENTIONS AND HAMFESTS: 2003 ARRL NATIONAL IN DALLAS

The 2003 ARRL National Convention is now slated for June 20th through the 23rd at the Arlington Convention Center in the Dallas suburb of Arlington Texas. The national will be a part of Ham Com which is the very popular West Gulf Division convention held every year. More information is on the web at www.hamcom.org. (ARRL)

**

CONVENTIONS AND HAMFESTS: JSAR SHOREFEST AUGUST 11

The Jersey Shore Amateur Radio Society is pleased to announce its 4th Annual ham radio Shorefest . The event is slated for Sunday, August 11th at the Bayville Fire House on Route 9 in Bayville, New Jersey. The hamfest is all indoors in 4,000 square feet of air-conditioned pleasure. More information is in cyberspace at www.jsars.org. For advanced table reservations or tickets contact Bob Reed, W2CE, by e-mail to w2ce@arrl.net. (W2CE)

**

BREAK 2

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

SPACE TECHNOLOGY: SEEING THE SOLAR ECLIPSE WITH MICROWAVE EYES

The June 10th partial solar eclipse attracted quite a bit of attention because the event could easily be seen. However, the sun is also a powerful source of microwave signals, so the eclipse should have been visible in the radio spectrum as well. And thanks to the efforts of Dr. Brian L. Dougherty of Caltech we now have graphs of the solar microwave eclipse.

Dr. Dougherty operates a microwave dish in Californias Owens Valley. That antenna is tied to receivers that records the radio spectrum of the sun every 9.6 seconds, covering roughly 100 frequencies between 1 and 18 GHz. With a bit of data processing, we are all able to see the eclipse in the microwave region your own eyes at http://srbl.caltech.edu/020610.html

There is also a real time Solar Radio Burst Locator during the day to see the sun's microwave events as they take place. Its in cyberspace at http://srbl.caltech.edu. (CGC Communicator)

**

EMERGING TECHNOLOGY: DIGITAL TV ANTI-PIRACY DEADLINE

July 15th. is the deadline set by Representative Billy Tauzin for the Hollywood studios, the computer industry and consumer electronics manufacturers to develop a method to protect digital TV from being pirated onto the Internet. The chairman of the influential House Commerce Committee is growing impatient over the stalled transition to digital TV. He also knows that the switch won't happen until movies and popular TV series can be protected from exposure to cyberspace piracy. If private negotiations fail, Tauzin says that he is prepared to step in and mandate government intervention. (Published news reports)

**

INTERNATIONAL - CONTESTS: CHANGE IN THE ITALIAN WRTC2002 TEAM

The 2002 World Radiosport Team Championship committee has announced a change to the team being sent by Italy. According to Ari Korhonen, OH1EH, Fabio Schettino I4UFH, has replaced Maurizio Panicara, I4JMY on Team Italy. Schettino will operate with Stefano Brioschi, IK2QEI, in next summers games. (WRC 2003 Release)

**

DX

D-X, a Y-L mini DX-pedition to Nauru planned for October has been dealt a major blow by officials. VK4SJ tells Q-NEWS they are not going to C21 because the Australian Government has commandeered all rooms in the only two hotels on the island. Without accommodations they can not get a Visa to stay on the island.

But thats not all! The group has been put to an additional expense as well as suffering cancellation fees for something completely beyond their control. It seems that their travel Insurance has an out in the contract. It come under the clause of government intervention. The government says no and that lets the insurance company off the hook. (Q-News)

Also, a reminder that as of the end of June the cost of mailing a postcard or Q-S-L card domestically will go from 21 cents to 23 cents. Also, a domestic first class letter of up to one ounce will cost 37 cents. The increased rates will also affect your credits at incoming QSL bureaus, plus the cost of mailing magazines such as CQ, Worldradio, 73 and QST -- to name only a few. (CQ)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 1

And finally this week, while the entertainment industry is concerned about digital piracy of its products, the public is wondering where digital television is today and where it is really going. One of those asking is a listener to the D-X Audio Service named Victor Schmidt. He wrote to Editor and host Fred Vobbe, W8HDU, for some answers. Here is part one of W8HDUs reply as it originally aired on the May 2002 edition of the DX Audio Service magazine:

--
THIS IS AN AUDIO ONLY REPORT. To hear it, go to www.arnewsline.org and download the MP3 audio version.
--

Fred will be back next week with a look at the kinds of television receivers now in stores, those that go into your personal computer and what the future has in store. Be sure to tune in. (NRCDXAS)

**

==========
===

Amateur Radio Newsline report number 1298 with a release date of Friday, June 28st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams are on the scene of the worst wildfire in years, Australian researchers say they have discovered how to teleport light and an old friend in Earth orbit surprises hams on the ground. Theses stories are first on Amateur Radio Newsline report number 1298 coming your way right now.

(Billboard Cart Here)

**
RESCUE RADIO: HAM RADIO AIDS AT ARIZONA WILDFIRE

It's hams to the rescue, again! This time it is the RODEO/CHEDESKI fire in Eastern Arizona.

Over 350-thousand-acres -- more than half the size of Rhode Island and far from containment!

The FCC reserved emergency frequencies for fire related communications only.... during daylight hours, 7.265 MHz on 40 Meters and after dark, 3.990 MHz in the 75 Meter band.

W7TSA -- a club station operated by the Salvation Army set up at one of the evacuation centers. It operated as primary net control ... with other Arizona stations picking up the duty in shifts -- making sure the frequencies were monitored 24-hours a day.

--
OFF AIR AUDIO HERE
--

One of the priorities, was setting up a VHF repeater, to enable reliable, short-distance communications for mobiles and portables:

--
OFF AIR AUDIO HERE
--

The Forest Service has set up firefighting headquarters in the town of Show Low, and one of the operators at W7TSA, located in the town's high school, gave other monitoring stations a rundown of activity, Tuesday night, June 25th.

--
OFF AIR AUDIO HERE
--

Those two frequencies -- 7.265 and 3.990, plus or minus 3-kHz -- are reserved for fire only duties -- for up to 14-days. Watch for the FCC announcement when things return to normal.

For some interesting short-wave listening, tune in -- but please don't transmit on those frequencies unless you're actively involved in the emergency response. (Story written by Alan Kaul, W6RCL)

**

AMAZING TECHNOLOGY: LIGHT BEAM TELEPORTATION CLAIMED

Some are calling it brand new era in telecommunications. Others say its like the famed Star Trek Transporter coming true. Others simply don't believe that the first successful experiment in teleportation has actually taken place. But it appears to have happened in Australia. Q-News Graham Kemp, VK4BB, is there with the details:

--
Scientists at Australian National University have succeeded in teleportation.

That is, the disembodiment of a thing in one location and its reconstruction in another.

In this case, a beam of light allegedly disappeared in one place and reappeared in another, a short distance away, via the mechanism of quantum entanglement. Data imbedded in the beam were also recovered.

Reporting from Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.
--

Scientists say that if this finding is duplicated and verified, this experiment would certainly be regarded as one of the most remarkable steps forward in telecommunications technology so far this century. (Q-News)

**

HAM RADIO IN SPACE: LONG DORMANT AO-7 SPRINGS TO LIFE

AMSAT OSCAR 7 has returned from the dead and is shipping telemetry data on 145.9738 MHz. This, some two decades after it went silent in 1981 after its batteries failed. Amateur Radio Newsline's Don Wilbanks, KC5MFA, has the details:

--
AMSAT OSCAR 7 was launched in November of 1974. It was one of the first of the more advanced ham satellite designs with uplink on 70 centimeters and a downlink in the 2 meter band. And, working with it's predecessor A-Oh-6, it was the first ham satellite used for space to space relay. And in 1981 it went Q-R-T.

It's unexpected return came on June 21st when Pat Gowan, G3IOR, in the U-K happened across the slow speed Morse telemetry. It was then monitored by a number of other satellite enthusiasts around the world.

Why is the long dormant bird suddenly returning to life? According to the old HR Report newsletter, the battery failure in 1981 was probably a short circuit. Now, two decades and numerous charge cycles of sunlight later, the short circuit is clearing.

That theory is born out to a great extent by former AO-7 Project Manager Jan King, W3GEY. According to a quote from King on the AMSAT website, the power management levels shown in the telemetry indicate an anomaly. He says that the battery voltage telemetry shows a voltage of 13.9 volts. Normal is 13.6 to 15.1 volts. So that would suggest the battery was normal but, the half battery voltage is measuring only 5.8 volts. In other words, a dead but open circuit battery pack. This leads to speculation that the satellite is operating directly off of its solar battery array and is active only when in sunlight.

But before you decide to try operating on the old bird, AMSAT has this warning. AO-7 listens on 432.1MHz. Due to changes in Amateur Service and Amateur Satellite Service there are questions as to legality of Amateurs transmitting to the bird. This is because the uplink frequency predates the WARC '79 allocation of 435 to 438 MHz by the International Telecommunications Union for the Amateur Satellite Service.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, in New Orleans. Roy.

--

To elaborate a bit more on why it might be a bad idea to try and use AO-7. The uplink frequency falls in the current 70 centimeter weak signal segment in all three I-T-U Regions. Because of this, it would appear that anyone trying to access the uplink is operating outside the Amateur Satellite Service rules and regulations. (AMSAT-NA)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Twin City Amateur Radio Club Net serving Champaign and Urbana Illinois.

(5 sec pause here)

**

ON THE AIR: FIELD DAY WAS KIDS DAY

Field Day 2002 may also have been the third Kids Day operating event of 2002. This as youngsters across the North America took to the airwaves using the new GOTA or Get On The Air stations. Amateur Radio Newsline visited the Santa Clarita Amateur Radio Club as it put a bunch of visiting youngsters on the air: Take a listen:

--
Contact Audio
--

The new Get On The Air stations have replaced the old Novice stations at most Field Day sites. And, if this year is an indication of the future the Get On The Air is here to stay. (ARNewslineï¿½)

**

ENFORCEMENT: MINNESOTA SUSPENSION FOR REPEATER INTERFERENCE

A Minnesota ham will be off the air for a while. This based on allegations of interference to a two meter repeater. The FCC's Riley Hollingsworth, K4ZDH, explains why:

--
We issued a warning letter regarding repeater interference to Michael Priest, KB0KMJ, of Deluth Minnesota. The interference was to the Arrowhead Amateur Radio Club repeater on 146.94 MHz. Priest has responded to our letter and has accepted a three year suspension of all Amateur Radio privileges.
--

The interference Hollingsworth referred to occurred on numerous occasions between January 2 and April 4 of this year. Priest's license suspension remains in effect until midnight on May 15th, 2005. (FCC, RAIN)

**

ENFORCEMENT:

The FCC is also looking at a V-E testing session in Tennessee where a pair of Volunteer Examiners allegedly administered Amateur Radio exams to close relatives. FCC Part 97 rules prohibits a V-E from administering an examination to a spouse or other specified relative. The purpose of the rule is to help insure the integrity of the volunteer testing process. Again the

FCC's Riley Hollingsworth, K4ZDH:

--
Hollingsworth: "We sent inquiries to two VE's regarding apparent testing irregularities. We need information as to why Bobby A. Raymer, N2BR, administered an Amateur Radio exam to his wife and signed-off as a VE.

And we want to know why Steven G. Hunter, KF4FAV, administered a radio exam to his brother Gary E. Hunter."
--

Both of these incidents occurred at a December 1999 ARRL sponsored V-E session in Cookville, Tennessee. Hollingsworth says that Raymer has replied and that response is under review. (FCC, RAIN)

**

ENFORCEMENT: DON'T OPERATE ON CB

Five hams have been accused of operating Amateur radio-transmitting equipment without a license on 27.585 MHz and other frequencies near the 11 meter Class D Citizens band allocation. The agency says that operating radio transmitting equipment without a license for a specific service is a violation of Section 301 of the Communications Act.

The FCC says that it is important for hams to understand that violations on frequencies other than the ones they use as Amateurs can jeopardize their licenses and could subject them to other penalties. In this case, the five were warned that they could face fines or imprisonment, as well as seizure of radio transmitting equipment. Fines normally range from $7,500 to $10,000. (FCC)

**

CONFERENCES AND CONVENTIONS: CHANGES FOR HAMVENTION 2003

Jim Trangenstein, KB8OUO has been named as the General Chairman for the 2003 Dayton Hamvention. Trangenstein, who has already served at Assistant General Chairman replaces Jim Graver, KB8PSO, who held the top post for the past three years.

Also departing from the Hamvention team is longtime Forums Chairman Jim Ebner, N8JE. Ebner and his wife plan to leave the Dayton area and relocate to North Carolina. In his parting e-mail, N8JE told his many friends that he has truly enjoyed working with them for the past fourteen years.

And two final items before we move on. According to a note from outgoing General Chairman Jim Graver, the official attendance figure for Hamvention 2002 is 24,832. Also, Hamvention 2003 is slated for next May 16th, 17th and 18th. More information is in cyberspace at www.hamvention.org. (KB8PSO, N8JE, DARA)

**

CONFERENCES AND CONVENTIONS: AMSAT IN TEXAS IN NOVEMBER

The 20th Space Symposium and AMSAT-NA annual conference is scheduled for November 7th to the 11th in Fort Worth, Texas. The event will chronicle recent and future Amateur Radio satellite technology developments. AMSAT Members are welcome to attend the AMSAT Board of Directors Meeting on November 10th and 11th. The Chair for the 2002 event is Keith Pugh W5IU. (ANS)

**

HAM RADIO POLITICS: NFCC ELECTION CORRECTION

Dick Isley, W9GIG advises that we have an error in last weeks report regarding the election at the National Frequency Coordinators Council. Dick says that the election for the three National Frequency Coordination Board positions starts on July 9th and ends on July 28th. We typoed the election as starting on 28 and the announcement of whose elected made on the 31st. As Isley pointed out, it would be very hard to get all the ballots in and tallied in only three days. (W9GIG)

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with a report on the financial condition of Amateur Radio Newsline, here is its Treasurer and Support Fund administrator, Andy Jarema, N6TCQ:

--
Most of the time, I try to keep these reports as light hearted as I can. This time I have to be very serious. The reason: There is no money in our account to pay outstanding bills.

Here are the numbers. In the account is about $250. In my hand -- right here -- are bills for the months of April and May totaling close to $1600.

Do the math yourself. That's a $1350 deficit, and this does not take into account the month of June that is quickly coming to an end. You can add another $800 to $1000 there. And, put in another $900 to cover Amateur Radio Newsline's part of the upcoming Young Ham of the Year Award in August.

As you know, I am the guy who writes the checks. I am also the one with the power to pull the plug. To take Amateur Radio Newsline off the phones, off the Internet and off of your radio. I don't want to do that, and I am trying not to. But if the dollars run out and none come in to replace them, I will have no other alternative. And right now, there are no dollars coming in.

As the song in the Broadway show Cabaret says. it is money that makes the world go around. In the case of Amateur Radio Newsline, it takes about $1000 a month on average to keep it going. And we need your help right now -- today

-- to keep it from disappearing from the airwaves.

Remember, the Amateur Radio Newsline is a federal 501 C 3 tax exempt corporation. Your donations to it are tax deductible. The address to send your assistance is the Newsline Support Fund, Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

As always, we thank you in advance for your support.

I'm Andy Jarema, N6TCQ

--

If you missed the address for the Newsline Support Fund it will be repeated at the end of this weeks report.

**

EMERGING TECHNOLOGY: LEARNING LONG DISTANCE

The United States House of Representatives has voted to make it easier for students to take classes over the Internet. This, by relaxing restrictions on correspondence courses.

Supporters of the bill, which passed 354-70, said it would expand educational opportunities for people who cannot take courses in traditional classroom settings. The bill allows some schools to offer more than half their classes by telecommunication. It also cuts the number of instructional hours nontraditional programs must offer each week to be in line with the requirement for traditional classes. Nontraditional programs - such as distance learning courses - must offer at least 12 hours of instruction each week, while traditional programs have to provide one day of instruction.

A companion bill introduced by Wyoming's Mike Enzi is pending in the Senate. (Published news reports)

**

SPACE AND SCIENCE: NEW ANS CO-EDITORS

AMSAT North America has announced the appointment of Joanne Maenpaa, WB9JEJ and Harrison Faust WW4HF are the new co-editors of the weekly Amsat News Service. Both have extensive experience as Editors of Technical publications.

And with the change in Editors the AMSAT News Service will begin a metamorphosis of its own. Beginning with the June 16th issue, the e-letter was split the actual news section from the satellite report for a trial period. Both sections will be made available to subscribers but as separate e-mail delivered bulletins. (ANS)

**

SPECTRUM REALLOCATION: AMATEUR BANDS RETURNED TO HAMS IN PANAMA

Some good news for ham radio operators in Panama. They are getting some spectrum that was reallocated away returned for their use once again.

Two years ago the Panamanian government issued a revised frequency allocation plan which removed. It 30 meters and several UHF and microwave bands from the amateur service there.

Now, the ARRL Letter reports that an effort to reverse the changes spearheaded by the Radio Club of Panama has been successful. The Panamanian government has now reportedly agreed to restore all previous amateur allocations except for those in the 902 to 928 MHz band. (ARRL)

**

INTERNATIONAL - NETHERLANDS: DIGITAL RADIO ON SHORTWAVE

Media Network reports that Netherlands Digital Radio Mondiale is now testing from Bonaie at 21:30 to 23:25 UTC Bonaire is on 15.520 MHz in simulcast mode. That is analog and digital signals are on the same frequency at the same time.

The simulcast frequency as specified is the center frequency of the digital signal which actually ranges from 15.515 to 15.525 MHz. The analog is from 15.525 to 15.530 MHz with the analog carrier is located at 15.530 MHz, hence an analog tuner should be tuned to 15.530 MHz in order to receive the signal. You'll find the full updated schedule of DRM tests from Bonaire at http://www.rnw.nl/realradio/html/drm_latest.html. (Media Network)

**

INTERNATIONAL-CANADA: RAC DIRECTORS APPOINTED

Radio Amateurs of Canada's Board of Directors has approved the appointment of Bjarne Madsen, VE5FX and D. Howard Dickson, VE1DHD, as Directors for the Midwest and Atlantic Regions respectively. These appointments are effective immediately filling unexpired terms to December 31st of two directors who had previously resigned. (RAC)

**

DX

In DX, HB9DRD who is also G4KLX advises that there will be a Leichtenstein satellite expedition on July 13th and 14th. Jonathan and his partner Achim, DH2VA, will operate 50 KHz below the AO-40 beacon so as to stay out of the way of normal QSO's. Their Uplink will be on U-band and if signals get to weak they may change to CW operation. (VHF Reflector)

And Herb Spoonts, W3IWI, reports that the CY9 party is en-route to St. Paul Island. Operation will commence shortly and continue through July 7th. Look for them on several bands including 6 and 2 meter Meteor Scatter using standard sequenced WSJT. (W3IWI)

On HF, F6CTL is in French Polynesia and on the air until the 15th of July. He also plans to visit Rurutu and Tubuai in the Austral islands. These islands count as OC-050 and OC-152 respectively for the Islands on the Air Award program. (RSGB)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 2

And finally this week, we continue our look at digital digital television today and where it is going. This week, DX Audio Service Editor Fred Vobbe, W8HDU, teells you how you can receive digital television and the hardware thats available to do the job:

--
THIS IS AN AUDIO ONLY REPORT. To hear it, go to www.arnewsline.org and download the MP3 audio version.
--

Fred will be back next week with a look at the spectrum that digital television is supposed to use and how its actually using it. (NRCDXAS)

**

NEWSCAST CLOSE

Message-ID: <eEET8.1070$DP5.89436@newsfep1-win.server.ntli.net>
Source record: 12658

This is total trivia, but I just aquired an old QSL, ZC6JM. Interstingly
that prefix was for Palestine and was allocated to the UK when that
area was a British Protectorate (I think). A deleted prefix now of course.
Just out of curiousity, does anyone happen to have other ZC6 QSL's
and what are the callsigns? Rich.

Source record: 12681

Was there a VP6DX operating about March 5, 2002?
QTH? QSL route?

I (thought) I worked him on 10 meter SSB at 2100UTC, but haven't seen any info about him. I could have heard his call wrong, but wasn't smart enough to ask for it phonetically. Oh, well. This was shortly before the Ducie Island expedition, but I don't think he was there or the pileup would have been bigger :)

TIA for any help.

Yes, there was such a callsign active, but nobody knows anything about
him. Perhaps a slim? The callsign is mentioned on VE3HO's website,
but he denies all knowledge of him.

2417. DXers stolen car

Newsgroup: rec.radio.amateur.dx
Date: 2002-07-08 08:52:47 UTC
From: Ian <altp@nutrimetics.net.au>
Message-ID: <ijcW8.30416$Hj3.92483@newsfeeds.bigpond.com>
Source record: 12693

I'm not an amateur, but a SW dxer.

Hey I know this isn't DX news but what the heck..

Just had my car stolen in the mid morning hours today Mon July 8th from Finley NSW (Southern Riverina). One other car stolen from Finley at the time was recovered from Deniliquin.

If anybody sees a White (VL 1987) Holden Commodore Sedan (Rego UYU 962) about with smashed side window about please E-Mail me or ring your nearest Police station. I really needed this like a bullet in the head (being of ill health & on a pension) at the moment...but that's life.

If any within the amateur community would like to put the word out on the Amateur radio networks I would greatly appreciate your assistanace & look out about the community I would be most gratefull

Else any suggestions on getting the word out would be appreciated. ie, CB, Internet, Radio (most radio stations need approval from the Police to air announcements & the police aren't that co-operative these days etc etc) ...any ideas or contacts appreciated on getting the word out.

Thanks for your patience.

E-mail me at pacificfm@hotmail.com OR contact the local police if you have any news.

Thanks

Ian Baxter

Jim,

I think what we have here is a failure to communicate!

This poor sap thought that rec.radio.amateur.dx was instead:

real.poor.excuse.for.radio.comms

or possibly:

cbers.are.real.dumb.

or

key.that.lyneear.till.it.blows!

Another prime example of what too much 27mhz RF can do
to a brain already 80 percent mush.

CUL!

Gary

I am looking for a good logging software program. Right now not for heavy DXing or contesting, but something I eventually could interface on line data bases etc. Not wanting to spend a lot of money. BTW, any decent freeware out there?. Would like to have one that has automatic time logging that is coordinated with the computer clock. Thanks.

Hi Jerry:

For casual use and operating, try Excel.

You can macro a lot of interesting logging features such as automatic
time logging from your computer, WWW call lookups, dupe checking, etc.
and if you already own the program, its free. Never hurts to learn
what you already own better for your own applications too. And you
can export all you log in any order or format for imports into
something else if you change in the future. Nice on-line support
via USENET for Excel also.

Most people around here seem to use some version of Microsoft Windows as
their OS. But does anybody have a recommendation for a logging software
that runs under Linux?

For your information:

Hi YL,OM

Thanks for your patience and contribution.
After returning home from my expedition to ZL and VK in april I set out to get a nice color-QSL for you. I was lucky to find partial sponsoring from ELLI print and they sent me the cards early june.
However, due to some mixup in the DL mail they evidently were returned to them as there was nobody at home to get the package (abt. 30 kgs!, hi) and at the office they did not want to keep them till longer than a couple of days so by the time we arranged to go and get them everything had be returned.
Anyway now I am hopeful to receive the cards sometime in the near future, but to give you a look at them I enclose a compressed image of both the VK and the ZL cards. Sure hope you do like them and will be happy to receive the cards if all goes well sometime in august.
The directly received cards will be taken care of first; I try to confirm all multiple contacts made during my stay in the same cover even if only 1 contact was requested directly.
Bureau cards will be taken care of after that and are supposed to leave PA0 in october (due to an unfortunate absence of the local QSL manager in september I may be forced to hand in these during the PA DX meeting in september)

By the way, we had a terrific time down under and I can only advise you to go and experience for yourselves. Hospitality is really great and with the ham radio you always manage to contact people.

I made about 3500 QSO's (90 countries) from ZL and 900 (60 countries) from VK, so it seems I will have to return there someday to complete DXCC, hi.
Well, there still remains an alluring unnumbered south Australian group..... (Don't think I did not try to go there, but problems galore)

BTW if you happen to hear me on the air this coming weekend in the IARU HF championship (mixed mode) don't hesitate to call me and I will be grateful to you for the contacts.

Hi Jerry,

That question touches a raw nerve with me, and I'm going to launch
into a bit of a rant and offer a couple of suggestions based upon it.
Asking that qustion is akin to asking which Operating System is best,
or who makes the best cars :-) Everyone has their favourite and will
defend it 'till the end of time <grin>.

The short answer to your question is this (from my experience): Try
AALog for simple tasks and DXBase for a program that does everything.
I'm not a contester at all, but I can tell you that neither of these
are great. (I just installed N1MM contest logger and it looks good so
far, but since contesting's not my fortï¿½, I can't give an honest
thorough evaluation).

BTW, no logger I've ever tried incorporates a time synchronizer, but
there are so many stand-alone synchronizers out there for free (or
next to it) that you can use and have operating seamlessly in the
background. I've purchased YATS32 in earlier days, and I use Tardis
today (runs as a service in the background of my Win2K box, setting
the time every 2 minutes...never a problem since the day I installed
it). Just about everything integrates to a CD-ROM database like
Buckmaster, QRZ or Flying Horse, and some will let you click an entry
in your log and will bring up QRZ.COM in your broswer, tuned to the
call you entered. I like having both methods available to me in DX
Base, but I wish it gave me the option of looking online in Buckmaster
instead or QRZ.

THE STATE OF LOGGING
As one who loves to try new and interesting software all the time,
I've evaluated about 15 logging programs under Windows within the last
8 months or so. Many I just glossed over (perhaps unfairly), and I've
used 4 very heavily--until finally settling on one.

For Now.

<rant on>

We are a hobby of and about technology. The callbook says there are about 1.6 Million of us around the world. Many hams, I'm sure, are also geeks who are highly computer-literate and work in the IT world professionally. Why, then, is it impossible to find The Perfect Logging Program?

I'll qualify my remarks by saying that I demand an awful lot from my software--probably more than most casual users, or those who cling to their 386's like they were gold. My prmary machine is a P4 2.4 GHz, 2 GB of RAM, 250 Gb of HDD space, onboard RAID, SCSI and tuned to within an inch of its life. My shack machine is just a little less powerful than than my primary. My laptop is fairly recent and everything's connected by 100BASE-TX to my router and ultimately online. I also run a Linux server and a Mac for my wife's work. I'm a systems and network administrator professionally and a computer hobbyist as well as a ham.

I say these things not to try and sound high-and-mighty--I'm happy with what I've got in my datacenter, but I'd give much of it for the ability to put up a tower and yagi and run some real power--but to put my requirements for software into perspective and explain why I am ranting thus. I'm unfortuantely a bit of a pipsqueak on the air (100W, dipole--and damned lucky to have even that). But back to logging and software.

I insist on having a Windows look-and-feel to any application that I use. I demand that the program be 100% 32-bit code--no 16-bit ports or kludges. To that end, I eliminated anything that had a DOS look or was in fact a DOS based app. Again, perhaps this is unfair, but we're in 2002, not 1992. I don't like using DOS. Sorry you purists, that's just the way I feel.

If just about every developer for non-ham-radio software can implement a look and feel that's integrated to that of Windows, why can't my logger be able to do the same? I'll cast anything aside that doesn't. Sorry. Not fair? Maybe, but that's what I want and what I'll pay for. That takes care of a lot of apps, including Logger.

I want something well thought out, well written and well implemented. I want and expect the keyboard shortcuts and menus and dialogs that work in every major Windows program to work the same way in my logger. To date, NONE that I've tried have gotten it right. Not ONE.

Unlike many hams, I don't care how much my logger costs--well, within reason, naturally. If it's perfect and free great. If it's perfect and $299, great. If it's free and buggy or awkward or unintuative, to hell with it. If it's going to cost $299 it better be a dream to operate, have every bit of code optimized and be lightning-fast; every feature would have to be pefectly implemented and the app have 24x7 tech support. If it's priced somewhere in the middle, it must be a good compromise and worthy of what's charged.

So what did I use?

I started with a freeware logger called WinLog32. Since I was only using an old TS-820 S that couldn't be computer-controlled, and I didn't know if I'd be able to keep my antenna up for more than a few weeks at that time, I elected to go with something that was good at being just a simple logger. I didn't care about integration of anything except my QRZ.COM CD-ROM disk.

WinLog32 was pretty good, but eventually I ran into some trouble with the way it behaved and it's interface. I wrote to the author with my concerns, and he really wasn't interested in adding any user-options. It was the way he liked it and that's all that mattered. It was free, so I could like it of lump it.

Lump it was.

It was during that time that I agreed to try out ProLog. This is one of the 800 pound gorillas in the logging market and I was eager to see how I liked it.

I didn't. I couldn't wrap my paper-log-based brain around the author's premise of "one window does everything." No log window to scroll through--just the present contact displayed. Some folks like it but not me. I will say that it has excellent integration of a QSL-manager app within ProLog, but that wasn't enough to entice me to continue working with it. Is it a bad program? No way...it's extremely powerful and very robust--it was just a User-Interface thing that I really hated with an active passion. Sorry.

When starting with ProLog, incidentally, I discovered one real nasty problem with the logs generated previously by WinLog32...it's ADIF export isn't properly recognized by most other software! I had a real devil of a time with the 750 contacts that I made in WinLog32, in terms of getting the data into the ProLog database. Some formatting was way off and I completely lost track of QSL sent and receive dates, it didn't recognize operator name, notes or LSB and USB (everything was just SSB). Ugh! NOTE: I am NOT blaming this on ProLog--this one's strictly on WinLog32's back.

I tried a few others in the next week or so until finally settling on AALog. What a dream!! This is one well-written program, easy to use, simple to get up and running and can be freeware (minus a few features) or paid. I bought it and wasn't sorry.

I was able to import my ProLog (and to some degree WinLog32) logs with only a day's worth of frustration and after that everything worked beautifully. Again, it's a relaitvely lightweight program and doesn't have all the toys that the big guys have, but it's a real nice start. If you don't care about rig interface (they're working on it), rotor control or cluster integration, etc, then this is definitely the way to go. There's even a Cabrillo export function if you want to mess around with contesting (it's NOT a contest logger by any stretch, but if you're like me, and like to work a hundred or two Q's in a big contest like CQWW, it's really nice).

I strongly recommend this program, although I do wish the author had a little bit better grasp of English (he's Russian) or perhaps find a good English proof-reader <grin> (Alex, the capital of Canada is Ottawa, not Toronto <Grin>). The help files are comprehensive, however, and e-mail turn-around is usually within a day and a half or so. Pretty impressive, and what's better, Alex is very amenable to implementing new features. What a wonderful attitude!!

Oh, and one last compliment to AALog...it's the ONLY program I've seen that shows all three relevent times in the input window...MY local time, UTC and the DX station's time, based on his prefix!! Think about it...you're in the heat of battle and not thinking time zones, when up pops AP2IA. Do you wish him a pleasant good morning or good evening?! It's a little thing, but it's a favourite part of AA Log. Oh, also it's extremely easy to tell QSL status at a glance...depending on the QSL status (neither sent nor received, sent/received, sent/not received, received/not sent). The whole line (record) turns a different colour. I still have a lot of cyan-coloured QSOs in my log, alas (not confirmed yet).

And one nice thing about the author being Russian...all that country's Oblast information and time zones are accurate...not all loggers understand the complexities of that region.

Soon, however, I was really looking to spread my DX wings and that's when I got a radio that could interface to my computer (a TS-570D (G). Time to find another 800 pound gorilla.

With ProLog out of the equation, I really only had a choice between DX4WIN and DX Base.

DX4WIN was really nice in a lot of respects, but it wasn't quite ready for prime time I felt. It still felt like a DOS program when I evaluated it last fall (it isn't, and v 503 is pretty nice). I really wasn't impressed with the report output and the overall look and feel. I'd prefer a time-limited fully-featured demo to a feature-limited one (or the option to choose which), so I never got a chance to fully experiment with it as my primary logger. It's still a good program, but not what I wanted.

Which left me with DX Base.

I bought it last year (version 2002) and it's been the workhorse of my station since about a week after getting it up and running.

I'll say this up front. I don't really like it in a lot of ways. first off, there's no demo, just the Help file with a lot of screen shots. It's written in MS Access rather than a real database like Delphi or Oracle (For the love of Glub, why can't ANYBODY write a kick-a$$ logger in Oracle?? Please?? I'll but it...really I will--if it's well written, of course).

It's slow, it's not as customizable as I'd like. It has an extremely sharp learning curve and is NOT very intuative in many respects

(especially the label designer--Jack PLEASE do something about this--it's hideous!). The help files are massive but comprehensive--and sometimes a little intimidating as well.

DX Base will disable your computer's standby and Hibernate modes because of it's Packet integration, or so I was told. I don't use packet (I use a Telnet cluster with my T1), and I'd GLADLY trade that functionality for my beloved "Hibernate." Configuration of the field orders in the main logging window (and the Previous QSO window) is complex, completely non-intuative and can't be opened to be changed (must be re-done from scratch each time you want to change anything).

You can't drag-and-drop fields in the QSO window which is almost unforgivable. Up until this year, there was no option for ADIF export (needed a 3rd-party free utility). Even now, it's a pain in the butt. Also, some shortcuts common to every other Windows program in the world aren't used because they conflict with Packet commands (I'm specifically thinking of CTRL-S and CTRL-P but there are others).

Those are the downsides. The upsides are the incredible power and complete integration of this program and the relatively good look and feel of the program and the windows it spawns. With about 5500 QSO's in the log it's not too slow for an Access-database, but I'd be interested to put it up against DX4WIN's Delphi-based database with a DXPedition's log of 50,000 Q's and see how it behaves.

It integrates all aspectes of DX logging that I need--telnet cluster windows, rig control (and rotor for those fortunate enough to have the need) and integration of same, fields automatically populated from the CD-ROM or past QSOs, address and QSL labels, nearly seamless integration to a program called DX-Atlas (this alone is almost worth the $100 price of admission), and excellent award tracking. When it came time to submit my first DXCC it printed out the report that I could just send of to the League--it was their own form, populated the way it needed to be. It also printed out the cover sheet exactly as needed! I believe this is thanks to an integration of Crystal Reports within DXBase. I've also upgraded to the 2003 version which added about 53 features.

That all said, it took a LOT of time to set it up properly, including a very long phone call to Jack to sort out some problems not well explained in the HELP file. He was patient and very helpful. I also had a serious problem in getting the DXCC report to output correctly that required 3 tries and lots of going back over the logs clicking database field buttons, but that was an anomaly that I hope won't happen again.

Despite its shortcomings, I've chosed DX Base as my logger. Its power, integration of everything I need and rock-hard stability make up for its shortcomings. Since I've invested the time to master this app, I'm also loathe to switch again, unless something marvelous and world-beating comes out.

If you're looking for a good all-round logger and don't need the fancy toys, go with AALog v2.3. If you want everything, go with DX Base for now--at least until someone writes The World's Best Logger.

Like I said earlier, however, why is it impossible to find a logger that works like just about any other Windows-based program in terms of the UI? Fast, intuative, and absolutely 100% customizable!! By way of comparison, I look no further than the program in which I'm writing this article, Fortï¿½'s AGENT (www.forteinc.com). My goodness...this program is the ultimate Usenet news program, and it gets better with every release. Even though its development was stagnant for a few years, it's still the best there is...that says something. It sells for $30 and every single feature is completely customizable to your heart's desire. The development team welcomed--and implemented-- user suggestions (at least it did in its earlier iterations). Its interface is completely in line with the Windows API, all the keyboard shortcuts that you can use in Word or Excel or Outlook or Eudora or IE or Netscape work in Agent. Can you make all of these statements about any logger out there? At ANY price point?

<rant off>

Thanks for putting up with my verbosity. I really hope to find, someday, somewhere, a powerful piece of logging software that I can recommend unreservedly. One that does everything I need, looks, feels and acts like any other Windows application on my system, is rock-solid, fast and can wipe the floor with every other logger out there. What say you, developers?

2435. Beware of TI2YLL, "Jose Gerardo Garcia Mora" a.k.a. "Gerardo Garcia", radio amateur and "collector"

Newsgroup: rec.radio.amateur.dx
Date: 2002-07-11 10:18:23 UTC
From: lejonet64@yahoo.gr
Message-ID: <b54c86dc.0207110218.5f57117a@posting.google.com>
Source record: 12611
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur

Dear radio amateur friends (and perhaps fellow collectors),

Please be warned about HAM radio amateur"Mr. Jose Gerardo Garcia Mora"
of Costa Rica, callsign TI2YLL. http://www.qrz.com/callsign/TI2YLL ,
http://www.eham.net/callbook/ (search for TI2YLL)

As a "collector", he has cheated many in the collectors' community in
the past. But this might also concern you, too. Apart from QSL cards,
he has also advertised for other collectibles' exchange within your
community's pages.
And I believe that you often exchange items related to your hobby,
too.

Several months ago, I posted a message on several newsgroups to warn
collectors about "Mr. Jose Gerardo Garcia Mora" of Costa Rica,
"collector" or "seller" at times of, breweriana, cans, matchbooks,
paper money, coins, stamps, phone cards, postcards,cigarette packs and
of course QSL CARDS. I consider him the worst cheater I have ever
come across; he has cheated at least 10 individuals besides myself, to
my knowledge.

Mr Garcia's name has been included in several collectors' Black lists.
Here are links to just a few of them:

http://www.geocities.com/kirbas/mora.html (phonecards)
"http://www.network54.com/Hide/Forum/thread?forumid=169329&messageid=1007389482&lp=1007389
482/
" (banknotes)
http://www.ophetweb.nl/collcoin/blacklist.html (coins)
Jan Meinders black list at http://www.beercollection.net/
(breweriana)

Mr Garcia Mora had disappeared completely from the Internet since last
September, right after cheating me. Recently he reappeared with new
email and surface mail addresses, and sometimes with a different name
(more like a different combination of his 4 names). I was alerted by
a cigarette pack collector from Italy and after a brief search on the
Web discovered the following:

He now uses the following email addresses:
electronica2391@hotmail.com,
electronica96@hotmail.com and ti2yll@qsl.com
(instead of the old imex81sa@racsa.co.cr)
and this surface address:

P.O.Box 10485, (instead of PO Box 7138 which he had been using since
1993)
San Jose,
Costa Rica,
America Central

He now mostly appears as "Gerardo Garcia" , instead of Josï¿½.

This man has managed to remain active since 1993, beginning without
the aid of the Internet. He has been blacklisted before, but he
somehow manages to continue
cheating, by avoiding newsgroups and large, frequently visited sites,
by switching from one field to another and by disappearing for
months from time to time. People either choose to forget about him or
just
don't have the time to go after him.

Thank you all very much for your time-and, for those of you who are
fellow collectors, happy "safe" collecting .

Xenophon Alexopoulos, Greece

email: xenophon "at" kodros "dot" gr

~ ~

For more details, here follows the latest research I have done on this
individual:

For years he has posed as a Ham Radio amateur with the call sign
TI2YLL. Look at http://www.qrz.com/callsign/TI2YLL. This was his old
identity as "Jose Garcia."
At another related site, http://www.eham.net/classifieds/, try a
search for TI2YLL. Here you see a new email address combined with the
old PO Box number and his usual name.
At "http://www.guestbook.ru/book.cgi?user=uradxclub&action=show/ ",
yet another email address. He does not mention a name here but it is
more than obvious that it is him.

At the following links he appears with the new email address as
"Gerardo Garcia" and has a new PO Box address:
http://jos.hkcampus.net/~jos-wym/gbook.html
http://members.tripod.com/~HouleV/America.htm
"http://www.santanderciudadviva.com/tablon.asp?buscar=&paginaactual=5/
" in Spanish
"http://www.molepostcards.com/services/adverts.php?id=497&p=1&o=&s=/"
http://books.dreambook.com/peacenest/main.html from
http://www.deuss.com/peacenest/
http://www.pcbandit.net/guestbook/guestbook.pl ,
and at http://www.pcbandit.net/traders/ (number 103)
http://www.cigpack.at (Guest book).

Besides the above, he maintains three separate pages on
www.webshots.com , where he proudly displays his postcard, cigarette
pack and QSL card collections, the greater part of the first 2
collections quite possibly stolen.
http://community.webshots.com/user/69as010
http://community.webshots.com/user/ggarciacr
http://community.webshots.com/user/packs1952
http://community.webshots.com/user/matches101 (empty for now)
Are the cigarette packs perhaps those stolen from Thomas
http://members.aol.com/lfm1111/thieves.html ?

Hello Jerry,
I have tried nearly al the loggers out there some free and some more
that $100 over the past 6 years. For my own needs I have found Logger
to be the best for my needs. It's free and runs fine on - all - Windows
machines
from Win 3.1 to Win XP Pro which is what I use it on. It is very easy
on ram, cpu cycles, and resources. A 32-bit version is currently being
developed. For more info, testimonials, and screen shots click here...

My feelings exactly.

I have tried every logger I could find that was free or shareware or offered a free demo. (after finding enough bad free ones I wasn't about to go out paying for one - wasn't willing to bet $$ it would be any better!)

Many of them were actually pretty good, but every one of them had a bad flaw somewhere.

I don't have a problem with DOS (and for the right program, would even be willing to install Linux on the hamshack computer) but none of the DOS programs were any better than the Windows ones.

I expected my choice to have all of the following:

- Ability to print QSL labels. Not only immediately during the QSO, but also at later times. (i.e., when I get a shipment from the bureau)

- Copy of unchanged information from previous QSOs. If I sign off with the guy I've been working on 14.017 CW and someone else calls, why should I have to type "14.017" and "CW" again? (loggers with rig interface fix this but sometimes you don't have an interfacable rig)

- Grab time from the system clock. Believe it or not, some loggers didn't do this, you had to type the time & date manually.

- Track DXCC. (I've made WAS in just about every concievable way so I didn't look at that but certainly it's important for others) Including 5BDXCC. And including QSL status.

- Sensible field order during entry, and ability to rapidly skip fields for which no data is available. (what, <TAB> does nothing?! I have to <ENTER> through 15 fields before I can save a QSO?!)

- Ability to see previous QSOs with the same station.

- Ability to import and export the log. (I will deal with just about any text format as I'm not above a bit of custom BASIC or Perl programming...)

- There were a few more points that I've long since forgotten, but where a program simply didn't do something I felt it needed to do.

==========

Someone lent me a (not exactly legal) copy of LogWindows - it turned out to be close enough to be acceptable, and I sent the $$ to buy a copy. I'm still using it. It's not perfect but it's usable.

I suppose as was suggested, someday I'll need to write my own... it sounds like an easy project, but once one starts trying to actually do it...

I found the fields too limiting. I settled on VQLog - www.vqlog.com.
It's a good compromise. No rig control though which would be nice.

Walt, if I were a coder and database guru, believe me it would be on
the top of my priorities list. My IT knowlege is in the admin side,
alas. I've talked to a colleague who's a software architect and
database guru and we may start a project in the winter months, but it
would really need the talents of at least one serious ham-coder, DXer
and award-chaser.

Actually DX Base, ProLog and DX4WIN will do all this for you and a LOT
more, and do it realtively well. In my message earlier I was
lambasting them or criticising them for UI horrors and poor
customization abilities, not for lack of functionality.

>Someone lent me a (not exactly legal) copy of LogWindows - it turned out to

That's one I never tried in earnest, actually. I think I'll give it a
whirl.

>I suppose as was suggested, someday I'll need to write my own... it sounds
>like an easy project, but once one starts trying to actually do it.

I think that depends on what you want to create. A killer-app logger
is a fully-relational database that requires some serious coding
knowledge and understanding (certainly several orders of magnitude
beyond where I will ever be--I'm just not a coder, either Morse or C
<grin>). Good luck to you if you decide to start off a project like
that.

Likewise. I will tolerate a lot of things, but if it won't deal with an envelope full of bureau cards (one program would print *ONE* label on each sheet!) or forces me to hit "ENTER" 15 times before it will let me log a QSO (while playing around in a contest or entering paper logs after the fact? Not gonna happen...) that's definitely a deal-breaker!

Most of them did have good import/export functions. A few that were good in most other areas fell down on import/export though.

I can handle the Morse but C is another issue.

Even figuring what country a station is in given the callsign is not a trivial programming task, let alone the rest of it...

I have two of the big three logging programs, and I've just switched!
Check out CommCat at
www.commcat.com

It may not be your cup of tea, but it is now my favorite.
Powerful, yet easy to get the info I want and easy to get it to do what I
want.
Gets QSL info (stateside) from the web, easy to set up correct filters for
the telnet,packet and web dx spots, and it was easy to get it to print
reports direct to my qsl cards....no labels!!!
Check it out!!
...Dave

Hi Dave,

I saw this demonstrateded at Dayton and it really looks neat...especially the bandscope feature. From what I see it looks like it's certainly an excellent DXers program in terms of massaging spots. I'm going to give it a try in the next few weeks and see how it handles QSL management duties, award tracking and reporting. It doesn't seem to offer integration to DX Atlas (my favourite DX-related program ever, and interfaced to several logging apps), but that's a minor problem.

How does it work in this scenario: Your cluster displays a spot for a station you think you might need. Does it instantly doa lookup and tell you, "yes, you need St. Paul Island on 40 CW?"

Once you determine that in fact you do need the spotted station, you click the frequency and the radio QSY's if I understand the explanation correctly. If the spot contains a QSX line, does it setup your radio for split? Does it then take that spot, frequency and system time and enter it into the log waiting for you to work the station (or cancel and give up in frustration<G>)? Does it autopopulate the log or input screen with date, time, frequency as well as name and QTH, grid square, IOTA, etc, from your CD-ROM?

Another huge thing for me in logging is being able to glean any type of data with a minimum of effort. For example: I just got a card in today from Costa Rica, for a 20M contac in May. Without having to jump through hoops, I want to be able to enter "TI" (and maybe a GO or ENTER button) in a particular window and instantly see all my TI contacts, who I've QSL'ed, who I've gotten a card back from, what bands I have TI worked/confirmed on, what their zone is, any IOTA if applicable and the grid square if available. I don't want to have to resort my whole log to do so. I also want to be able to easily re-sort the order of the fields in that previous QSO window by dragging and dropping column headers (something databases written in Access don't seem to allow, for some unkown reason, and a real drawback to DX Base for me).

I saw two new logging programs at Dayton--ComCat was one, and I forget the other one (they were in one of the yellow rooms near Inrad filters). Both looked really nice but I didn't really think they were ready for prime-time yet.

2444. More on 40 SSB Split Operation

Newsgroup: rec.radio.amateur.dx
Date: 2002-07-12 05:29:25 UTC
From: thompson@mindspring.com
Message-ID: <aglp8p$ou3$1@slb7.atl.mindspring.net>
Source record: 12620

I notice that there seems to be a great deal of SSB DX operation between 2100Z and 0000Z. Several listen up split starting at 2200Z but in the summer that is much too early for Atlanta where its not sunset until after 0020Z. They work W1,2,3 and 4 Virginia but the stations need to stay around (at least on weekends) until 0030 or 0100Z to work the SE USA and perhaps W8/9 and parts of Eastern W5.

Last night OH0NL was listening split at 2200 to 2230Z but he was S6 here and covered by QRN from thunderstorms that come up almost every night. During the fall and winter we normally hear OH0
very well (2 el beam at 30 meters) but during the summer its at sunset or their sunrise. After he left A G0 and a DL came through working into VE with S9 signals (0015 to 0030).

Hope to see you on 40 meter split soon.

73 Dave K4JRB

Hi Dave!

This matches my observations pretty closely. Last night I could copy
W1AW on 7047 at about RST 559 from 2200 UTC onwards, which is long
before sunset EDT. However, USA sigs are best between about 0200 and
0500 UTC, with the 9's, 5's and 0's peaking at about 0430 UTC. The 6
and 7 call areas are rarely heard on 40m at this time of year, because
our sunrise occurs at about 0400 UTC ... i.e. before their sunset.

This morning at 0438 UTC I worked AJ4AY in Mobile, AL (7040 kHz) who
was running just 4 watts. There were also good signals coming through
from WB9FEA just west of Chicago, IL at that time. Yesterday at 0235
UTC, I had a solid PSK31 QSO on 7072 kHz with AG4LB in Lexington, KY.
He was running just 5 watts from an FT817.

I'm often on abt 7072 kHz PSK31 at around 0400 UTC (midnight EDT),
looking for W and VE, but the level of activity is very low.

Amateur Radio Newsline™ Report 1300 July 12, 2002

Celebrating a quarter of a century in service to ham radio, this is Amateur Radio Newsline report number 1300 with a release date of Friday, July 12th 2002. It follows in 5-4-3-2-1.

The following is a Q-S-T. The ham radio Olympics are happening in Finland and a Reading Pennsylvania teen is named Young Ham of the Year here in the United States. Find out who on Amateur Radio Newsline report number 1300 coming your way right now.

(Billboard Cart Here)

**

RADIOSPORTS: THE HAM RADIO OLYMPICS FOR 2002 ARE ON

Its the Super Bowl of ham radio contesting. The 2002 World Radiosport Team Championship games also known as WRTC 2002 have been taking place this week. Jeramy Boot, G4NJH, reports:

--
The World Radiosport Team Championship, sometimes called 'the Olympic Games of Amateur Radio', takes place in Finland between the 9th and 15th of July. WRTC is a competition among 52 two-person teams of the top amateur radio contest operators in the world.

By bringing competitors together in one geographic area and providing equal operating conditions, including antennas and power, the variables normally associated with radio contesting are minimised, and the individual team's operating skills are emphasised. Look for the national teams taking part in next weekend's IARU HF Championship contest from sites in the Helsinki area and using callsigns with the unique OJ1 to OJ8 prefixes.

Jeramy Boot, G4NJH.

--

The contest began at 1200 U-T-C on Saturday the 13th of July, and runs for 24 hours. The WRTC 2002 organizing committee is asking any of you who worked the conterstants to e-mail your logs by 1800 U-T-C on July 14. These "early bird" logs will be used only for log checking purposes related to the WRTC 2002 teams. The e-mail address is logs@wrtc2002.org

Also, Film maker Dave Bell, W6AQ, is in Finland recording the event on digital videotape. Bell produced the popular Ham Radio Olympics video that chronicled the 2000 WRTC games. (WRTC2002, GB2RS, W6AQ)

**

RESCUE RADIO: HAM RADIO AND THE TEXAS FLOODS

On this side of the Atlantic, the Federal Communication Commission declared a general communications emergency Friday July 5th in response to severe flooding in parts of Texas. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--
Thousands of people were evacuated from three West Texas towns as a massive storm dumped more than a foot of water on an area that rarely sees more than 2 feet a year. This, as rainfall in flood-weary Central Texas continued and flood water surrounded homes in 29 counties.

Statewide,the week of flooding has forced at least 4,000 people to evacuate, killed at least eight people and caused tens of millions of dollars in damage. Its also cut off normal lines of communications to some areas and that’s where ham radio was called in.

On Friday, July 5th, the FCC issued an edict declaring two parcels of spectrum -- one on 40 meters and the other on 75 as off limits to all but those stations handling flood emergency traffic for 72 hours. Those frequencies were 7.285 MHz during daylight hours and 3.873 MHz at night. Amateurs not directly involved in the emergency communications were required to stay at least 3 kHz away from these frequencies until the order is rescinded. The FCC cancelled the order at 1700 UTC on Monday, July 8th. But as we go to air, hams involved in Texas ARES, along with other volunteer groups, are still providing assistance to the flood ravaged areas.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

More on this story as information is made available. (FCC, ARRL Bulletins, Internet postings, other sources)

**

RESCUE RADIO: AZ HAMS STAND DOWN AS WILDFIRE IS CONTAINED

After weeks of battling the largest wildfire in Arizona history, ham radio has stood down and firefighters from around the country are being reassigned to other states or sent home. This, as the half-million acre Rodeo Chedeski blaze was finally contained on Sunday, July 7th. And hams have gone home. Amateur Radio Newsline’s Norm Seeley, KI7UP, in Scottsdale has the rest of the story:

--
SATERN, which by the way stands for "Salvation Army Team Emergency Radio Network was probably the most visible ham radio communications group involved with the giant Rodeo Chedeski firestorm. SATERN was active throughout the emergency providing assistance to The Salvation Army in it's disaster relief mission. The Salvation Army was assigned by the State of Arizona to be responsible for receiving all material donations. It also was responsible to distribute these supplies to any agency or group requesting them. The SATERN net, operated on 7.265 MHz dayside and 3.990 MHz evenings It finally stood

down and released the frequencies when the shelters closed down and their services were no longer needed.

What SATERN did not do was to handle health and welfare messages into and out of the area. That job fell to ARES and the Red Cross and both responded as expected. A-R-E-S used several High Frequency nets, local repeater communications and the Cactus Radio Network intertie to handle hundreds of tactical and health and welfare messages.

Another group deserving mention is the Kachina Amateur Radio Club. It was activated on June 18th handling communications for the Navajo Emergency Operations Center and shelters set up for the evacuation of all evacuation areas at that time. The Kachina Amateur Radio Club was on the air in support of the shelters through June 30th.

As the fire peaked in late June, more than 4,400 personnel -- most of them firefighters -- were working to corral the blaze. That number has been reduced to about 1100 now that the fire is fully contained.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, in Scottsdale Arizona.

--

As we go to air, the firefighters still on the scene are busy mopping up smoldering embers top insure no new eruptions take place. In some areas, crews are already at work seeding the burned land to help minimize the effects of erosion from the coming monsoon rain season. (ARNewsline™ from various sources)

**

RESCUE RADIO: EAS WORKING WELL IN THE ARIZONA WILD FIRE EVACUATIONS

The E-A-S system woked well in Arizona during the recent Rodeo Chedeski wildfires. According to reports in the CGC Communicator, Navajo and Apache County EAS woked almost flawlessly in ordering evacuations during fires. About 30,000 people were evacuated at the height of this emergency. (CGC Communicator)

**

Break 1

**

AWARDS: JOSH ABRAMOWICZ, KB3GWY, NAMED ARNEWSLINE™ “YOUNG HAM OF THE YEAR”

The nominations are in and the committee has reached a decision on this yearsAmateur Radio Newsline Young Ham of the Year. And now its time to share that decision with you. And who better to make the announcement than the 2001 Young Ham of the year. Pareick clark, KC8BFD. introduces us to yet another young ham who is keeping the hobby alive:

--

He is 17 years old. An 11th grader at Central Catholic High School in Reading Pennsylvania and an Eagle Scout. And less we forget, he loves bringing new young hams into the hobby through the scouting program. And for those reasons and many more, Amateur Radio Newsline has named Josh Abramowicz, KB3GWY, as its 2002 Young Ham of the Year.

Josh was away at a scout camp when the committee reached its decision. We finally got him on the phone and this was his reaction when we told him the news:

--
Abramowicz reaction audio
--

According to the nominating form, Josh Abramowicz became interested in ham radio because of his parents and the Boy Scouts. His dad is Mark NT3V and his mother is Suzanna NZ3G. Josh says that for him, becoming a ham was in the cards:

--
Abramowicz: I got into it [Amateur Radio] through them when they brought the stuff [ham station out years later after it had lied dormant for awhile. They hooked it up and I just could not keep my hands off of it As a matter of fact, I used to sneak up and just dial up and down the bands just listening to stuff sometimes."
--

His parents also gave Josh a good reason to get his ham ticket:

--
Abramowicz: "After the year years went by they said: 'Why don't you go and get your license – and by the way – if you don't get your license you are not getting a drivers license. I said O-K."
--

Talk about incentive licensing but in short order Josh had his Technician ticket. But it was his involvement in the Boy Scouts, a scouting Jamboree and a chance to operate K2BSA that really started his ham radio career:

--
Abramowicz: "So I looked into what was required on the application. Of coarse you had tio be a licensed Amateur Radio operator. By then I had my Technician license and I really started pushing for my General license. That's where I am now, studying for the Extra license."
--

As a member of the K2BSA staff at Fort A.P. Hill in Virginia, Josh helped to demonstrate ham radio to the 35,000 Scouts attending the event. He also helped in the training of some 400 Scouts who earned Radio Merit Badges at the gathering.

But thats not all. Another achievement credited to KB3GWY is that of organizing a scouting Amateur Radio Venture Crew with the Hawk Mountain Council in his hometown of Reading. PA. What is a Venturing Crew? Josh explains:

--
Abramowicz: “Its kind of like the Explorer program. It involves boys and girls over the age of 14 until you become an adult. It’s a completely separate program designated to high adventure kind of things – not your normal, average camping trips but more involved things like Philmont Treks and summer camp kinds of things or the Florida Sea Base would be considered high adventure.”
--

Josh presented his idea for a radio Venture Crew to the Frankford Amateur Radio Club and obtainded its support as the sponsoring organization. He then convinced the Hawk Mountain Council leadership to use space in a new science center at its headquarters for a perminant Amateur Radio station. This station will soon be available to campers the year round.

--
Abramowicz: “Its up here on the mountain. The propagation will be absolutely great. I’m expecting some really, really good DX from up here and we have high hopes. As a matter of fact, we are going to be doing a demonstration up here this weekend on Saturday. We are going to have some of the Venture Crrew kids up. Just fiddle around with to see whats open and see what we can find. Get the kids on and let them talk a little bit. Maybe a 2 meter set-up. And I think that the Cub Scouts are up that weekend. And they will be checking us out during their free time. They are up for a Super Cub Weekend.”
--

Josh Abramowicz, KB3GWY, will receive his Young Ham of the Year Award plaque at the Huntsville Hamfest in Huntsville Alabama on Saturday August 17th. His trip to the hamfrest is a gift from Vertex Standard Corporation which wiull also be prssenting Josh with a gift of its Yaesu brand ham radio gear. Josh will also receive a week at Spacecamp Huntsville courtesy of CQ Magazine.

--

The committee judging the award also name to runner-up finalists. They are Evan Anderson, KC0CWP, of Ashland Nebraska and Thomas Tenaglia, K3TAT who lives in West Chester Pennsylvania. Both will receive a certificate of appreciation from the award sponsors. (ARNewsline™)

REMEMBERING THE PAST: HEIL DONATES SPECIAL MICS TO QUEEN MARY AMATEUR STATION

A special presentation of ‘commemorative microphones’ honoring the operators of the Queen Mary ocean liner Amateur Radio station will be made on

Saturday, July 27th. This, by by Bob Heil, K9EID, the President of Heil Sound Ltd..

The Queen Mary is permanently docked in Long Beach California. The ship is a popular tourist attraction as is its Amateur Radio station, W6RO, which operates daily from the historic Queen Mary Wireless Room. And it is in that Wireless Room that the presentation will be made.

According to K9EID, the new microphones are being custom manufactured for the Wiress Room. He adds that each is an exact replica of the broadcast mic's used during the years the Queen Mary was at sea. (Heil Sound release)

**

HANDI HAMS: EXTRA CLASS TAPES NOW AVAILABLE

The Handi Hams have announced that the Extra Class Question and Answer pool, valid through 2006, is now available in an MP3 audio CD and in two track tape for its blind members. If you need a copy, contact Handi Ham headquarters at area code 866-426-3442 or sewnd an e-mail request to secretary@handiham.org. Again, yopu must be a Hamdi Ham member to qualify for this recording. And Handi Hams also has announced that work continues on the main body of the ARRL Extra Class License Manual in audio format for its blind members as well. (Handi Hams)

**

PROMOTING HAM RADIO: CQ MAGAZINE TAKES ON "THE HUMAN RACE"

CQ magazine has been named the Official Journal of "The Human Race." "The Human Race" is a planned educational television series in which two amateur radio operators will participate in a global "road rally." Amateur Radio Newsline's Henry Feinberg, K2SSQ, has an in depth look at the show and how it will work:

--

How does it work? Simple. There will be two ham radio contestants. One ham will head East and the other West from Kansas City Missouri beginning in July of 2003. Over the next six months the hams will travel around the world but using only transportation that is volunteered by other amateur operators that the ham competitors meet along the way. The race will end in a location roughly halfway around the world where the paths of the two competitors cross.

But thats only part of the story. Along the way, each racer will encounter a series of pre-selected "ham hosts." These are people who have expertise in a particular area of amateur radio. They not only play host to the competeing amateur, but also are interviewed by the competitor about their area of specialty and the role ham radio has played in their lives.

William Desjardins, W1ZY, is the shows producer. He says that " 'The Human Race' is based on the premise that Amateur Radio is inherently a human activity. As such, technology is a tool used by people around the world to connect and communicate with each other."

--
Desjardens: “People who use the Internet, and use chat rooms and send video pictures to each other -- and engage in instant messaging and so forth -- these people are prime candidates to become amateur Radio operators.”
--

By way of technology, each competitor will be outfitted with advanced communications systems, including amateur stations. Each will also be accompanied by a TV production crew and tracked using the Global Positioning System and APRS. This information will be displayed on a constantly updated website enabling hams and others around the world to follow the progress of the race making it a competition that everyone can be a part of.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

For its part, CQ will publish a series of articles and updates written by Human Race Producer Desjardins. It will also provide updates and additional information on its website.

The tentative schedule calls for the completed 8-part series ready to air in the fall of 2004.For more information on "The Human Race," see the program website at www.home.earthlink.net/~bdesj but soon to be moved to http://www.humanrace.org (CQ)

BREAK 2

Here 25 years ago and still serving you today. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

UPCOMMING EVENTS: MUSEUM SHIPS WEEKEND

Some interesting upcoming events that you will want to know about. We start off with Museum Ships Weekend. That’s the 20th and 21st of July and word that The U-S-S Salem Amateur Radio Club will be on the air as K1USN. During Museum Ships Weekend each participating vessel will be on the air for 48 hours and the idea is to work as many of them as you can In the case of the U-S-S Salem, a certificate will be available for working ten or more event stations during the event. For more information and a QSL address please take your web browser to www dot qsl dot net slash K1USN. (Via e-mail)

**

SPACE AND SCIENCE: HIGH ALTITUDE HAM RADIO BALLOON LAUNCH SUCCESS

EOSS 57, the Edge of Space Sciences Amateur radio group of Colorado successfully launched and recovered 3 high altitude balloons on June 22nd. THis, using Amateur Radio APRS and DF techniques to track and recover the payloads. According to several Internnet postings, he balloons carried high altitude experiments, camera's and fast scan amateur television to an altitude

in excess of 80,000 feet. The launch took place in DeerTrail, on I-70 east of Denver, with the balloons taking a general North easterly track. The landings occuring near the Fort Morgan Colorado area. The Montana Space Grant Consortium, and Iowa State University Habet crews launched with EOSS and tracked the balloons to touchdown. More information is on the web at www.eoss.org. (EOSS Release)

**

INTERNATIONAL - AUSTRALIA: VNG GETS 6 MONTH REPRIEVE

The Australian standard time and frequency station VNG, which was scheduled to close down on the 30th of June, has received a six-month reprieve. The station will now close down on the 31st of December 2002. The postponement came about following complaints from Radio VNG users. However, the commission that agreed to the postponement has also insisted that the VNG Users Consortium provide a voice announcement for broadcast on the station from mid-July, advising all users of the new closing date. (Q-News)

**

INTERNATIONAL – CANADA: PERMISSION TO JAM

The Canadian military and police departments have been authorized to block radio and mobile phone signals if necessary during the G8 Summit and during the Pope's visit to Toronto in July. A Royal Canadian Mounted Police spokesperson told szeveral newspapers that the move was essential to ensure the safety and security of those attending both events. This is the first time legal provisions against the interference of radio communications have been overridden in Canada. (Published news reports)

**

DX

In DX, word that SP3GVX, who operated from HF0POL in 1997 and 2000 will spend a year at the Hornsund Base on Spitsbergen starting in July. His new callsign is JW0HU. There is no QSL information available at this time. (GB2RS)

Also, SV1BRL will be active again portable from Kefalonia Island from July until mid-September. He welcomes bureau QSLs, but please note that they should be routed through the French REF Bureau, marked DPT 33. Do not send cards through the Greek QSL bureau. (GB2RS)

And a new RSGB QSL Bureau sub-manager has been appointed for the holders of Foundation Licences in Scotland. Those are the new MM3 series of callsigns now being heard on the air. The person taking on the post is Mr R Simpson, GM7NZI. His addxress is 53 Jedworth Avenue, Glasgow , Scottland, post code G15 7QE. (RSGB)

**

INTERNATIONAL – UK – A SECOND CHANCE FOE DIGITAL TV

Still in the U-K, an attempt is being made to revive that nations terrestrial digital TV industry. This, following the collapse of ITV Digital, the company that held the license. According to the Netherlands based Media Network e-newsletter, the U-K's Independent Television Commission considered four bids to take over the license, and has decided to award it to a consortium consisting of the British Broadcasting Company, British Sky Broadcasting and transmission services provider Crown Castle Communications. But the question remains as to whether or not the new consortium be able to restore confidence in the British digital television industry. More is on the web at http://www.rnw.nl/realradio/features/html/uk020705.html (Media Network)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 4

And speaking of digital television, this week we take a look at transmission systems and who is providing a digital picture to you. Again, from the pages of the D-X Audio Service magazine, here is Editor Fred Vobbe, W8HDU.

--
This is an audio only report. No text available. Please download MP3 audio at www.arnewsline.org.
--

By the way, for those of you not aware Fred Vobbe, W8HDU, is not only the editor of the DX Audio Service magazine. He is also the Chief Engineer at WLIO television in Lima Ohio where he das a first hand working knowledge of whats happening in the world of Digital TV. (NRCDXAS)

I bought vqlog a few months ago. It is still lacking many features like tracking YL's, State Caps, and being able to customize reports. For the most part it is a good logging program for only $15. Right now I'm debating to get Logic 6 from http://www.hosenose.com/logic6/ Maybe someone that is using it can give me some feedback on it.

Source record: 12625

Many think that because its summer there is no Dx on 40. WRONG...I find 40
is the most consistent band for W4 to G and W4 to ZS. I can work G and ZS
on most days although signals do vary. At your sunrise I hear loud G
stations working ZL too. G0NVD was S9 and I even heard him S7 on 75. 75 is
more affected by summer conditions as he is 59+ during the winter. I was
on PSK31 and I have to get
back on shortly. Otherwise I keep an ear out on 40 SSB between 0030 and
0400 (0400 is midnight
Eastern daylight time.

Source record: 12626

Hi DXers !

Hereby I announce our next IOTA DXPEDITION .

This Year the Caracas-DX-Club (Grupo DX Caracas) will be on the caribbean island "Toas" from July 23 to 28 2002. IOTA SA-066
The small island is located in the Gulf of Venezuela, not very far away from the HK-border.

Our call will be YW1T and we will operate all bands from 160m to 6m CW and SSB

QSL as usual via W4SO (Maildrop)

Hope to meet you from there.

After our return I will update my WEBsite and include also this new Expedition to the growing list :-)

VQLog allows some customisation for awards but not a great deal.
It is fine for WAS, IOTA etc.

The problem with the top-end log programs like Logic 6 is that they're
expensive and they typically don't have a demonstration available. I'm
not going to buy something like that without seeing more than a few
screenshots first.

2454. List of US counties ?

Newsgroup: rec.radio.amateur.dx
Date: 2002-07-13 20:51:15 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0207131251.686caea6@posting.google.com>
Source record: 12630

Hi,

I'm searching a full listing of US counties (there are over 3000).

Where can I download such a list ?

Question : usually QSL do not indicate the county.
So how to determine it from the callsign or city ?
Is there somewhere another list or a program to make the link between
the two information (in ordre to get some Country awards).

Thanks

Thierry

Hi Gary:

That is exactly what that means. Many DXpeditions are very slow in submitting the required proofs. Some never do, which means they probably had no official permission to be there or there was some goof up in the paperwork so they didn't have the papers, That happens often.

2461. What length for a vertical ?

Newsgroup: rec.radio.amateur.dx
Date: 2002-07-14 17:56:12 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0207140956.5210a23c@posting.google.com>
Source record: 12637

Hi,

As SWL of the HF bands, listening mainly 20, 17, 15m (for the other my 40m longwire or dipole are enough), I would like to install a vertical in my garden.

Not all are equivalent and I'm searching a model between 5-10m heigh offering, if possible, some directivity.

I heard this could be achieve with a 5/8 L vertical which perform much better than a L/4 or L/4 vertical.

Is this the best vertical so far ? Do I need an artifical ground plane at some height (3m or so) ?

Some brand to recommend ?

Thanks
Thierry

It could also mean that they didn't know there was any requirement for
them to submit documentation to the ARRL. I have been on a number of
DX-peditions over the years and have never sent documentation to the
ARRL. Does this mean my QSLs are invalid for DXCC? I don't think so!
What are the criteria that determine whether documentation is
required? And how does a DX-peditioner know the ARRL is waiting for
"proof"?

In my experience, for the HF bands (14 MHz and higher freqs), almost
anything performs better than a vertical! And for SWL-ing, it's not
that critical anyway.

Try a doublet with tuned feedline, or a delta loop, or a quad loop, or
a W3EDP, or a trapped dipole.

In one country where I operated from, I carried a letter to the
Telecommunications office asking for a license and giving the
particulars. It was accompanied with the suggested 'licence fee'.
They said OK and stamped my letter 'PAID' and handed it back to me.
Would that count?

Thanks for the links but on QSL usually you do not have the name of the county, only the city and state are indicated.
How to make the link between the two data ? Is there somewhere a database of a file listing all city sorted by county or state ?

Hi,

It would seem that what you will have to do is get a good US atlas. A data table with all cities would be very large. You can get a table that list county "seat" city, but that likely wouldn't help much.

This, or something at this site, may be helpful:
http://www.census.gov/cgi-bin/gazetteer

It would perhaps be better if you provided a link to each file
(maybe zipped, gzipped or compressed) instead of "hiding" the
information in a large *.exe file which requires a particular
brand of operating systems on the interested reader's computer.

Is there any general rule concerning the number of green stamps appropriate to send when QSLing direct to a DX station from the US?

Generally I've been sending IRCs, 1 unless I can find reference on-line to the country needing more than 1 for US airmail postage, but I recently worked a station that asked for QSL direct and US $4...

I know the US has low postage costs, but $4 seems a bit much to be paying simply for airmail postage for a envelope containing a postcard... Or am I out of touch? I'm a relative newbie to DXing...

I know the real answer is "How badly do you need the card?", but I want to see if I'm way off base in this.

Hi Bob!

I agree with you; I think $4 is an extortionate demand. I do not
think there is a country in the world where $2 would not cover the
cost of mailing a single card in an envelope by airmail to the USA.
In the UK, even though postage rates went up last week, $1 or 1 IRC is
still sufficient. We also have the good fortune to have a very low
price for new IRCs at our Post Offices ... still only GBP 0.60 each
(equivalent to about 90c US).

However, there does seem to be an increasing trend for DX stations and
QSL managers to expect a contribution towards the cost of cards, or
DXpeditions, as well as the return postage. For example, the QSL
Manager for the recent Ducie Island DXpedition has made it known that
people who sent more than $5 will receive priority treatment with
QSLs; those who sent less will have to wait at the bottom of the pile.
I am not going to comment upon the 'morality' of this. :-) It
depends upon one's point of view.

Some QSL Managers will not reply to bureau cards ... often on the
grounds that the outgoing bureaux in their countries will not accept
cards sent on behalf of non-members.

It really is a question of how badly you need the card!

Good luck!

YES

AALog can do everything you want. Hi.

But AALog has another features:

1. Special contest edition.
2. With help TrueTTY you get RTTY/PSK/etc.
3. With help CWGet you can receive CW and put data (call, name, qth) into log
4. AAVoice - voice keyer for AALog
5. DXsoft cluster monitor - advanced tool for web and telnet clusters monitoring.
6. CWType - cw keyer for AALog
7. HamPort - Rig control program for AALog (ICOM and Kenwood now)

8. AALog can cooperate with DXAtlas by VE3NEA

All programs can work together

Some programs (cwtype and Hamport) is free. Other has 30 day trial.

Check DXsoft web site http://www.dxsoft.com

For more details you can write directly to me.

There are a number of charts floating around the Internet that show the cost of sending an airmail letter from a number of countries back to the United States (converted into US money). Most places are still about (or under) a dollar, but several are not. Most notable is Germany, which is about $1.50. Here's an excellent site: http://www.qsl.net/k4hb/postage.html.

Please remember that in recent days the Euro has gained value against the US dollar, and I believe surpassed it on Monday...therefore the rates you'll find on those pages may be out of date.

Another good place to check is http://www.qsl.net/n6dhz/irc-chart.html. This one lists places where IRC's are preferable to Green stamps, and how many of each is needed. It's not a comprehensive list, but it's a good starting point.

>>Generally I've been sending IRCs, 1 unless I can find reference on-line to
>>the country needing more than 1 for US airmail postage

From my experience in the last little while, QSLs sent with IRCs got a significantly lower rate of return than QSLs sent with one or two US dollars. Even for countries where the posession of US currency is unlawful by its citizens, I think a straw poll will quickly reveal that most hams prefer the GS's to IRCs. I've gotten about a 40% return rate for IRC cards and over 70% for GS mailings. This is all within the last year (I've sent out about 600-650 QSLs in total, and I've gotten about 400 back overall).

>>but I recently worked a station that asked for QSL direct and US $4.

What's his call? I'd be interested in knowing who and where he is so I'll know not to bother trying. I'll bet I can give you a few other suggestions of stations to listen for in that person's country that are not trying to make a living off of QSL money. I honestly can't think of anyplace on this planet that I'd give someone $4 for their card, plus the cost of my card, envelopes and 80 cents postage. No, it's not a lot of money, but it's the principle.

>>I know the US has low postage costs, but $4 seems a bit much to be paying
>>simply for airmail postage for a envelope containing a postcard... Or am I
>>out of touch? I'm a relative newbie to DXing.

You're not out of touch. He is, and badly so!

Yes, all too often they fall into a black hole (in someone's pocket).
I've sent a lot of $ and IRCs over there and never got squat back.

Happily, Ken (K4ZW) is going back over there in September and has
offered to help get cards from JT1CO, JT1BG, and JT1BV. Send a SASE
and greenstamp to his home call for cards for these stations you have
worked. Other JT stations require 2 greenstamps.

Deadline is Sept. 4, 2002. E-mail Ken at K4ZW@Staffnet.com if
necessary for more info.

Good to know; I'm tentatively planning on visiting London on an upcoming holiday, so maybe I'll pick some up, since here in the US they're $1.90. :-)

I don't object (per se) to DXpeditions encouraging donations, as long as it of the nature of "$(reasonable amount) Direct, additional donation appreciated." I'd probably send more based on the same formula another poster mentions involving many factors including what I ate for lunch. :-) But this wasn't (to the best of my knowledge) a DXpedition.

I need the country, but it isn't high on the most wanted list, and as a beginning DXer I need a lot more countries before it becomes an issue. I'll probably send one via the buro, and if I don't get one back, life will go on.

> Thanks 73 Dave K4JRB

Technically, the issuing PO is suppose to stamp them when they are
issued and they are good for one year from that date. Any increase in
the local sales cost are irrelevant because the IRC exchange value is
based on what it costs to send a first class letter back to the country
of origin.
A good estimate would be that 99% of the postal employees around the
word aren't very knowledgable about IRCs so the point may be moot
depending on where they are sent.

Hey Dave, if you were K4JRB in the early 80s I was the guy who handled
your cards at the Buro in Charlotte. I had the J block!

Can anyone tell me what voltage I have to set on my TS-950 finals with VR1? The input to collector Q8 is 75V no load, what is the voltage suppose to be on the emitter of Q8 or fuse on the finals? Any help would be greatly appreciated...

This is not correct. "Old style" IRCs have no expiration date, at least
for redemption in the USA and as long as they are stamped later than January
1, 1975. This is stated in the USPS International Mail Manual (section
372.1) available on the USPS web site. Having said this, there are an
increasing number of amateurs in other countries who claim that their local
post offices no longer accept "old style" IRCs. This, too, is not correct,
per Universal Postal Union information. But, local postal employees in other
countries may be about as knowledgable as local postal employees in the USA,
who deal with IRCs very seldomly!

Although Pat is about a week late in his e-reply to this thread, his
advice to latch onto an old Rand McNally Road Atlas is a grand idea.
Not only will it reveal the county info, but will give geographic
reference if one is interested in further details.
I use a Rand Mc Nally European Road Atlas (another $1 ebay item) to get
a handle on European localities. Its better for such purpose than the
web sites that can take me to a street address.

Source record: 12568

Hi All,
from Fab, IK4VYX.

If you use a dxcluster while chasing DX, then this article is for you, otherwise it might hit your interest for some other technical aspects.

As you probably know, dxspots are nowadays available from a variety of sources: traditional packet radio nodes, telnet gateways, IRC nodes, web sites.
Your favourite dxcluster application probably supports already some or all of the above source.
But we all know that each software application is strong under some point of views, weak under some others.
It often happens that you would like to use your nice software application (for logging, cluster monitoring or rig control) with some additional features that you have seen in other software applications.

This article deals on how to link my DXTelnet software package to your favourite log, cluster monitor, or rig control software.
This union will surely bring more power into your shack.

DXTelnet is a powerful software package mainly oriented to receive DXSpots from a variety of sources, simultaneously with a virtually unlimited number of connections.
All the spots are then collected in a unique stream, dupe spots are filtered; you can define customized filters and all the spots that are not rejected are finally sent to the linked application which could be your favourite log, cluster monitor or rig control software.
But DXTelnet has also many interesting and original features that make it worth for stand alone use (DXTelnet is currently in use by hams in more than 150 DXCC countries).

Your favourite software will surely fall into at least one of these 3 classes:

1) dxspots reception via serial port
2) dxspots reception via TCP/IP (telnet) connection
3) direct dxspots reception via a DXTelnet software link

For case 1), I redirect you to a web page which describes several methods to link DXTelnet to the famous CT contest logging sw, via serial port stream.

http://www.k1ea.com/dxtelnet.htm

This case mainly applies to DOS based applications (such as CT or TR and many others).

In the very probable case that your application is windows based then
it surely falls into cases 2) or 3).
For example, the following softwares do fall into case 3):
DX4WIN, HAMLOG, LOGEQF, LOGWINDOWS, SWISSLOG, VQLOG, WINLOG32,
WRITELOG and others.

This article deals in detail with case 2):
how to link to any software supporting outgoing telnet connections
(some popular examples: DXBASE, EASYLOG, LOGGER, RXCLUS, TRX-MANAGER,
and many, many others)

By following the next step by step you will find out how to activate
this very useful link in a snapshot.

The DXTelnet download URL is:

http://members.tripod.com/dxhunter0/download.htm

The download file is named DXT51ENG.EXE (1.26M).
Once downloaded, just run it to self-install.
Double click on the DX-Telnet icon to start the main application.
Please don't worry, this is a safe file: no virus, no trojan, no hoax;
if you use an up to dated antivirus it will confirm what I state.

If you are starting DXTelnet for the first time it will prompt you to
enter your callsign.
In this case just type your callsign and press Enter.
Now, in the site list, select "Accept-1".
Click On the "Edit" button at the right.
In the service type section, select "Other" (Default is DXCluster, so
you will have to change it).
Now click on "Edit script".

The default script looks like this:

```
/S !!!Welcome into $$$$'s Telnet Box
/S !!!Please Login With your callsign
/S !!!login:
/C TERM 3
/F RELAY
```

You should change the script so that it results as follows:

```
/C TERM 3
/F RELAY
```

This by just removing the first three script lines
(select them with the mouse then hit DEL)

Now click on OK to save script changes.
You will get back to the previous form.
Click on OK again to save all changes.
Click on OK on the warning message box you will get.
Now press ESC to hide the site list.

Quit DXTelnet (Alt+F4).

Note: all the above operations must be performed only the very first time: a sort of one-shot configuration; the following part of this step by step is the only part to be repeated after the very first configuration .

Start DX-Telnet by double clicking its icon.
In the site list select Accept-1 and press the Enter key.

Now start your favourite application and set it to connect to 127.0.0.1 on port 23

Once connected, start another DXTelnet session.
Note: leave the previous DXTelnet instance (Accept-1) running when starting the second DXTelnet instance.

For example connect the second DXTelnet session to the CQDX-IRC node. The spots from the CQDX-IRC node should start flowing from DXTelnet into your favourite application

DXTelnet allows you to start as many sessions you wish and collects all the DX spots from all the sessions, filters them for dupes and sends all the filtered DX spots to the TCP/IP connection used by the other application

You may ask yourself why use DXTelnet as spot source if you already have telnet capability into your favourite software.
There's more than one reason to do this.
One could be, for example, the additional features provided by DXTelnet such as:

* multisource, multiconnection support
* voice spot spell on incoming spots.
* powerful spot filters (by frequency, by words, by spotter area and others)
* powerful alerts (redirectable into your cell phone via SMS)
* powerful spot related features (such as DXCC, antenna beaming, distance, Iota info and so on)
* automatic connection/reconnection to any node
* dx-info and qsl-info retrieval from the best online databases such as BUCKMASTER, GOLIST and QRZ
* networking capability (redirect spots from a machine to another, via network)
* internet spot bridge to local, RF based, isolated clusters
* internet cluster use from remote locations without internet facilities
* time/date adjustment from a collection of sharp time servers

These and many many other features.
For example, try to double click any spotted callsign, in DXTelnet ...

Important:
the here described TCP/IP local link will work even if you are not connected to your ISP.
A packet radio example:
If your packet cluster RF connection is not good but you see the spots received by someone else, you can think to use DX-TNC (embedded in DXTelnet) which works with a TNC either in connected or in monitor mode.
Then you would link your favourite software to DXTelnet/DX-TNC, as above described (with a DXTelnet Accept-1 session and a DX-TNC session, running together); this without needing any ISP connection (a local TCP/IP connection uses the winsock stack locally).
Same result is achieved even if the packet traffic you monitor is a cluster forwarding link: DXTelnet will translate ^PC11 packets into "DX de..." plain text spots.

Please check:
http://members.tripod.com/dxhunter0/comments.htm
To see what DXTelnet users say about it.

Enjoy!

If you have any questions you can email me at
dxtelnet@REMOVETHISlycos.it

(Note, remove the UPPER CASE "REMOVETHIS" string, to get my valid email address)

2499. RSGB IOTA Contest Announced Operations

Newsgroup: rec.radio.amateur.dx
Date: 2002-07-21 09:46:19 UTC
From: Bill Feidt <Bill@ng3k.com>
Message-ID: <Xns92523AB7847AEwfeidthiscom@216.200.68.12>
Source record: 12575

With the RSGB IOTA Contest fast approaching (July 27-28), potential contestants may want to have a look at the NG3K Announced Operations Web page for this contest:

http://www.ng3k.com/Misc/iota2002.html

The page currently contains information about 121 operations from islands around the world, as announced by their organizers and friends. The page is also available in versions sorted by DXCC entity and IOTA number. To access these, just click on the appropriate heading at the top of the main page table. Those wanting an ASCII version of the list they can more easily copy/paste for local editing can find it at: http://www.ng3k.com/Contest/conasc.html

Additional operations may be submitted by using the form found at: http://www.ng3k.com/Contest/consub.html. Don't forget to include the island name and IOTA number in the Notes field.

Finally, Ric, DL2VFR also maintains a page of announced operations that contestants may want to refer to. It can be found at: http://www.iota-post.de/contest2002/hauptteil_contest2002.html.

Amateur Radio Newsline™ Report 1301 - July 19, 2002

Amateur Radio Newsline report number 1301 with a release date of Friday, July 19th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The United States takes the gold at W-R-T-C 2002 but ham radio growth in the U-S appears to be standing still. These stories are first on Amateur Radio Newsline report number 1301 coming your way right now.

(Billboard Cart Here)

**
RADIOSPORTS: N5TJ AND K1TO MAKE IT A THREE-PEAT

The Lakers did it in Los Angeles in basketball. Now the Radiosport team of Jeff Steinman, N5TJ, and Dan Street, K1TO have made it three in a row as they win the World Radiosports Team Championship games in Finland. Dave Bell, W6AQ, attended the games. He is just back and we asked him to describe the event:

--
Dave Bell W6AQ: “I got to go out with the camera and watch them in action. And I saw some of thje worlds best contesters and I realized how they win contests: Thst is, they stay focused totally on what it is that they are doing for 24 hours. And other than swap chairs with a co-pilot so that the co-pilot becomes the pilot, those guys are focusted totally on this contest. For me, it is a lesson on how to concentrate and, if you are really into it – how to win.”
--

N5TJ and K1TO operating as OJ3A fended off a very close challenge from Igor Booklan, RA3AUU, and Andrei Karpov, RV1AW, who claimed the silver. The Americans had a score of 1,626,900 to the Russians 1,620,760. A difference of only 6140 points. W6AQ says that regardless of the numbers, these operators are dedicated to the sport of radio:

--

Dave Bell W6AQ: “The two winners this year, Jeff Steinman, N5TJ, and Dan Street, K1TO, also won last year and they won the one before that. And it was not surprising to me, ehen I came to their shack and watched them operate.”

“When I showed up there, Dan Street was the second operator and he noticed me come in and he nodded. I brought the camera up and came right around in front of Jeff Steinman. I was basically between him and his co-pilot. In fact I was actually looking at his face and I am not sure to this day that he even knew I was there – so concentrated was on listening and talking.”

--

The German team made up of Frank Grossman, DL2CC, and Bernd Och, DL6FBL, finished third to claim the bronze with a score of 1,614,591. All of the scores are on the web at www.wrtc2002.org. No announcement yet as to the venue for the 2004 WRTC games. (ARNewsline ™)

**

HAM RADIO STATS: NO GROWTH

The numbers are in and the word is -- stagnant. That about sums up the growth in ham radio since the introduction of a restructured United States Amateur service April of 2000. Amateur Radio Newsline's Henry Feinberg, K2SSQ, takes a close look at the numbers and what they mean:

--
The numbers come from the interpreter of the numbers. And W5YI Report Editor Fred Maia in Dallas Texas says that growth in ham radio is at a standstill.

Maia has been right on the money in his predictions over the years, and he looks back at the past two years in his newsletter. And in it, Fred says that there are just about the same number of Amateur Radio operators under FCC license now as there were in the spring of 2000. That's when the service was restructured.

In April of 2000 there were 678,539 holders of Amateur licensees in the United States and its possessions. In June of 2002 the number was 680,342. Taking into account attrition from people not renewing for any number of reasons, that's a net gain of only 1803 new hams over the past two years. Not allot, but there is a good reason. Keep listening.

Maia breaks the numbers down by license class. In April of 2000 there were 50,077 holders of Novice tickets. In June 2002 there were only 39,930. A loss to the license class of 10,147 but not necessarily gone from ham radio. Why? The numbers for General and Extra kind of tell the story. General is up by 27,037 and Extra by 20,282 since restructuring. Chances are that most of the new holders of General class are probably the results of upgrades by Novices and Technician's wanting a wider range of high frequency operating privileges. This is born out by looking at the numbers for the Tech license which is also down by about the amount General and Extra are up.

So its really been two years of ham radio musical chairs and that was not unexpected. It takes time for as massive a change as the restructuring of 2000 to settle in. It will be the next set of numbers a year from now in 2003 that will really tell the story.

Are we up or are we down? In 12 months we should have the answer.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The complete set of statistics can be found on pages 7 and 8 of the July 1st W5YI Report. (W5YI Report)

**

SPECTRUM: FCC PROPOSES ALLOCATION AND SERVICE RULES
FOR THE 71-76, 81-86, AND 92-95 GHZ BANDS

New rules may soon be on their way for a set of super high frequencies. David Black, KB4KCH has the details:

--

The FCC has proposed a Notice of Proposed Rule Making designed to promote commercial development and growth of the millimeter wave. This, in the spectrum in the 71-76, 81-86 and 92-95 GHz bands.

This millimeter wave band is also known as the Extremely High Frequency or E-H-F band. It refers to radio signals between 30 and 300 Gigahertz, where the wavelengths range between 1 and 10 millimeters. Research sponsored by the U.S. government has led to the verge of being able to use millimeter waves economically.

One advantage of using this frequency band is that the beams can be tightly collimated, easing channel sharing. Another important consideration is increased path loss due to oxygen and atmospheric absorption which can perhaps be viewed as a positive in terms of frequency reuse for wide dispersal applications such as high speed data transfer.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

If enacted, the new rules will be under Parts 15 and 101 of the Commission's Rules. (FCC, CGC Communicator)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7KSO repeater System serving all of Northwest Arizona.

(5 sec pause here)

**

HIGHER AMATEUR VANITY CALL SIGN FEE EFFECTIVE SEPTEMBER 9

The FCC has officially set $14.50 as the cost to apply for, renew or reinstate an Amateur Radio vanity call sign. According to the ARRL Letter, a Report and Order adopted July 3rd says that the new fee schedule will become effective for applications received on or after September 9th.

The current vanity fee is $12 for the 10-year license term. The FCC had proposed the new, higher fee in a Notice of Proposed Rulemaking released March 27th aimed at setting all Fiscal Year 2002 fees. Again, the new higher fee ineffective on September 9th. (ARRL, FCC)

**

ENFORCEMENT: FCC ACTS ON CALIFORNIA REPEATER INTERFERENCE ISSUE

A California ham appears to have decided to quit ham radio rather than fight allegations that he was the source of interference to a repeater. FCC Special Counsel for Amateur Radio Enforcement, Riley Hollingsworth, explains:

--
Riley Hollingsworth: Hollingsworth: “We opened an investigation of interference allegations against Steven Holt, KE6WSJ, of West Hills California. That matter involves interference to the WB6VBV repeater in Palmdale California. We have been contacted by Mr. Holt. He informed us that on the advice of his attorney, he was submitting his license for cancellation.” (RAIN, FCC)

--

ENFORCEMENT: FCC ACTS ON ANOTHER CALIFORNIA REPEATER INTERFERENCE ISSUE

But Holt is not the only individual involved in a California repeater related issue that the FCC is looking at. Another is Leobardo C. Coronado, KC6PXL, of Sun Valley California. Again, the FCC’s Riley Hollingsworth:

--
Hollingsworth: “Coronado is coordinated for operation on 145.120 Mhz but links to 224.160 Mhz on which there is a coordinated repeater receiving interference.”
--

Hollingsworth’s letter to Coronado said that the FCC had evidence that the repeater operator had taken no action to alleviate the problem even though he had been advised of the interference numerous times. The FCC gave Coronado 20 days from receipt of its letter to write back and advise the regulatory agency about the coordination status of his repeaters and what has been done regarding any complaints. (RAIN, FCC)

**

ENFORCEMENT: FCC QUESTIONS CALIFORNIA CLUB CALL SIGNS

And in yet another California matter, the FCC has requested that Long Beach resident Richard Crow, KB6IAT, justify a pair of club call signs for which he is listed as trustee. The calls are WB6FCC for an organization identified as the Richard Burton Amateur Radio Club and WB6JAM for a club called Jammers for Jesus.

The FCC gave Crow thirty days from the date of its June letter to provide justification as to the need for each of these call signs. He was also directed to furnish the Commission with a list of the names, addresses and telephone numbers of the members of the two clubs. Also, the meeting times and dates within the past year, proposed meeting times and locations within the coming year, and copies of minutes, if any, taken at meetings within the past three months for each club. Crow was told that the FCC would cancel the two call signs if he did not file a satisfactory response. (FCC)

**

EMERGING TECHNOLOGY: WORLDCOM AND UU-NET

Even if WorldComm files for bankruptcy it will have little effect on the way the Intrernet operates. This even though the troubled financially strapped telecommunications giant controls a big chunk of it. Jim Damron, N8TMW and Jeff Clark, K8JAC, have more:

--
WorldComm officials say that even if the company goes under, the Internet will keep running. This, after market analysts predict WorldComm will file for bankruptcy following a major accounting scandal.

The telecom giant handles half of the Internet's U-S traffic through a subsidiary known as U-U- Net. Newly elected WorldCom C-E-O John Sidgmore says that U-U-Net -- will keep going no matter what happens to the WorldCom parent corporation.

According to Sidgmore, U-U-Net handles more than 50 percent of U-S Internet traffic. This includes about 70 percent of all e-mails sent within the United States and half of e-mails sent in the world. Thousands of companies and agencies in more than 100 countries rely on WorldCom for Internet access, including the United States Department of Defense and the U-S Department of State.

--

The bottom line. The Internet and your e-mail are safe even if WorldComm goes away. (Published news reports)

**

SWAP MEETS: HAM LICENSE A MUST FOR SELLERS AT TRW SWAPMEET

The TRW Radio Club passes along a reminder notice that every seller at its famed monthly Swapmeet must show a copy of his or her valid Amateur Radio license in order to receive a seller's permit. This restriction is for sellers only. Those coming to browse or make purchases are not subject to this rule. The T-R-W swap-meet takes place monthly in the Los Angeles California area but draws buyers and sellers nationwide. (TRW-ARC Via e-Mail)

**

UPCOMING EVENTS: HAM RADIO AT THE SOAP BOX DERBY

Ham radio will be a part of the 65th running of the All-American Soap Box Derby. This, in Akron Ohio on Saturday July 27th. To commemorate the event, members of the Cayahoga Falls Amateur Radio Club will activate special events station W8D from 2000 to 2400 hours U-T-C from
July 22nd to the 26th. On the day of the race W8D will be on the air from 1200 to 2000 U-T-C. Look for this one on 7.275, 14.250, 21.275 and 28.340 MHz and Q-S-L to Post Office Box 14, Cayahoga Falls Ohio 44222. (Press release)

**

UPCOMING EVENTS: FORT TUTHILL HAMFEST

And finally one not in Ohio. How about Flagstaff Arizona the weekend of July 26th, 27th and 28th. That’s when the Fort Tuthill Hamfest and Arizona State ARRL convention takes place at Flagstaff Airport oat exit 337 on Arizona State Highway 17. Aside from the usual hamfest fare, the Fort Tuthill gathering has something very special to offer. The clean air of the Arizona mountains and a truly breathtaking majestic nighttime sky. And less we forget, there is the famed Fort Tuthill Saturday evening Barbecue that makes people want to come back for more.

And less we forget, there will also be a wedding taking place at this years Fort Tuthill Hamfest. The groom is James Pastorfield, KB7TBT. The bride is Laura Lindstrom, KD7KYO. They met during an emergency in which the local ham community was involved. Not a ham at the time, Laura was assigned to ride in Jame's vehicle. The wedding is scheduled for 5 PM, Saturday, July 27th. They hope to honeymoon at the Grand Canyon. You can see lots more at www.acra-az.org on the world wide web. (ACRA, ARNewsline™)

POST-IT NOTES CAUSE PROBLEMS

Warning: The effect of Post-It Notes on archived material is devastating. According to the Scripps Institution of Oceanography Library in La Jolla California the glue on Post-It notes eventually hardens and leaves a film that becomes acidic. This results in eventual discoloration and brittleness of the paper. In fact, Post-Its left for more than a month or two on already brittle paper such as old books can cause the paper to tear when the notes are removed. (CGC Communicator)

**

HAM RADIO IN SPACE: LANCE BASS IN TRAINING FOR ISS VISIT

Will a teen heart-throb be the next tourist in space? Possibly as Russian space officials soften their previously tough line on the much-hyped plans for a commercial flight to the international space station this October by pop singer Lance Bass.

Bass has already undergone at least two medical examinations and is now doing a round of intensive training at Russian space facilities. Two weeks ago, the 23 year old member of the group N SYNC began training in Russia at the Star City Cosmonaut Center near Moscow. A few days later, Music Television News reported that as part of his training, Bass would be dropped into the Black Sea for an emergency-splashdown test. He was also to be left in a Russian forest without food and supplies. He must also become fluent in the Russian language,

spacecraft flight control systems and standard operations of the International Space Station as a pre-requisite to fly.

The decision by the Russian agency to explore the possibility of Bass' flight was based on the idea that the $20 million ride would have one or more corporate sponsors. So far there is no word as to whether or not Bass would be willing to get his ham license and operate the ham station on board the I-S-S. (Published reports)

**

INTERNATIONAL - CANADA: VE1QJ APPOINTED ASSISTANT DIRECTOR

Maurice Le Blanc, VE1QJ, has been appointed as an Assistant Director for Radio Amateurs of Canada’s Atlantic Region. Le Blanc lives in St. Basile, New Brunswick province and is retired from the Université de Moncton where he taught English as a second language. He is also fluent in French, English, Spanish and German and has been licensed as an amateur since 1950. (RAC)

**

INTERNATIONAL: UK CONTEST WINNERS ANNOUNCED

The UK results of the special Marconi Centenary Contest that took place in December last year have now been released. This was a 'one-off' event to commemorate the centenary of Marconi's first trans-Atlantic contact between Canada and Great Britain.

The overall U-K winner was Dave Cree, G3TBK, with a total of exactly 400 VE QSOs. The UK winner of the 100-watt section was GI0KVQ with 149 Canadian contacts, while G4ELZ made an excellent 110 VE QSO’s and took the QRP prize. (GB2RS)

**

HAM HELP NEEDED: QSL’S LOST AS LIGHTNING STRIKES

Back here in the U-S-A, Don Moss, NL7CO reports over the VHF Reflector that Scot Sharp, KD5OMJ, was away on vacation when his house was hit by lightening. Moss says that it appears as though it entered the house through the ham shack modem line.

As a result of the ensuing fire, KD5OMJ has lost all of his logs and QSL cards and he is asking hams who had a QSO with him, to please send him a new QSL. This, because without logs he is not able to determine who he has talked with. Both Sharp and Moss are residents of Lawton Oklahoma. (VHF Reflector)

**

DX

In D-X, word from Ron Moorefield, W8ILC, that he along with K8FL, K8LEE, N9NS, W8GEX and WA8NJR will be operating between 40 and 6 metres as C6AJR from Eleuthera, Bahamas, between the 24th and the 31st of July. Modes will be on SSB, CW and PSK31. The team will also be in the IOTA Contest operating as C6DX.

QSL is via N8QET. (W8ILC)

Also word that DL4FCH, will be active, as DL4FCH/P from Pellworm Island from the 20th of July to the 2nd of August. Operation will be mostly on CW, and will include the IOTA Contest. (RSGB)

And word that W2SGX has become a VUCC awards checker in the central New York area. Carl says over the VHF Reflector that he will be available to check cards for VUCC awards at the Fingerlakes Hamfest on Saturday August 3rd. The venue is the Tompkins County Airport in Ithaca, New York from 10:00 AM until 2:00 PM Eastern Daylight Time. (VHF Reflector)

SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

And finally this week, its time for another Support Fund report from Administrator Andy Jarema. This time N6TCQ is not asking for funds. Just some advice:

--

Hi. I'm Andy Jarema, N6TCQ, your Amateur Radio Newsline Support Fund Administrator.

For the past several months, a number of you have written to us -- asking why we are not using on-line payments for Amateur Radio Newsline donations? Well, we have given it a lot of thought. And each time, we end up asking ourselves the same question: does the price tag to establish and maintain this service justify the additional cost?

No matter whose services we use, there are set-up and monthly usage fees for the secure e-commerce web server. And our bank will charge us 3 to 5 percent for every credit card transaction they process.

The answer is simple. Supporters would have to donate enough using this method to break even. Only after that could your generosity be put to work.

So for the next several weeks we'll be asking for your input. Would you use your credit card on-line to support ARNewsline?

Send your answer to newsline@arnewsline.org. If you are reading the Internet version, just click on the link shown. mailto: newsline@arnewsline.org.

Type "YES" in the subject line if you would use this service. If not, type "NO." Feel free to make any comments in the body of the e-mail. We'll tally the results and report to you in a future Amateur Radio Newsline report.

Remember, Amateur Radio Newsline is a 501(c)(3) corporation. Your donations are tax-deductable and your support is always appreciated.

That's it for this week. I'm Andy Jarema, N6TCQ.

--

In case you missed those instructions you can find them in the print edition of this weeks Amateur Radio Newsline report. (ARNewsline™ Support Fund)

There is no longer a requirement to have exchanged *any* reports for a
contact to be valid for DXCC.

Then how do they count the QSO as creditable for DXCC if there is no
confirmation of the mode employed (or if it was ambiguous, as in the
cited case)?

Last time I checked, there were DXCCs awarded for all one-mode
achievements (e.g.- CW). In the case at hand, how would they count the
QSL for a JT contact--as a cw or ssb contact?

It is not ambiguous. It says SSB, so SSB it is. The report is of no
significance. I think you will find, however, that it needs to say
"two-way SSB" or "two-way CW" to be valid for a single mode award.

You might consider DXKeeper, a FREE full-function logging application:

- comprehensive set of logging fields consistent with ADIF 1.0

- intuitive, configurable Log Management window

- compact Capture window for real-time logging with navigation shortcut keys

- extracts operator data from the Radio Amateur's Callbook

- powerful searching and filtering (full SQL is available)

- based on Microsoft's Jet database engine (logs are Access-compatible)

- tracks progress against DXCC, TOPLIST/9BDXCC, and GRIDs (more coming)

- automatically identifies needed QSLs based on DXing objectives

- generates QSL cards or labels, uploads in realtime to eQSL.cc

- aging report identifies overdue QSLs

- supports operation from multiple QTHs within one DXCC entity

- supports operation from multiple DXCC entity

- robust ADIF import and export

- 32-bit implementation runs on Windows 95, 98, 98SE, NT4, 2000, and XP

- iterative approach to development yields multiple releases per week available to all users

- strong, constructive user reflector at http://groups.yahoo.com/group/dxlab/

- automatically interoperates with other FREE DXLab Suite applications

* Commander for Icom/Kenwood/TenTec/Yaesu transceiver control

* Pathfinder for QSL route discovery

* SpotCollector for spot capture and analysis from packet/telnet/IRC

* DXView for

> beam heading display on world map

> solar terminator display on world map

> DX spot display on world map

> one-click rotator control (ARSWIN/Heath/Hygain/M2/Yaesu

* WinWarbler for 3-channel PSK31 and 2-channel RTTY from one user interface

* Propview for

> graphical propagation prediction (using included IONCAP engine)

> active IARU/NCDXF beacon monitoring (QSY's transceiver on schedule)

DXKeeper and all other DXLab applications are available via www.qsl.net/dxlab . See www.dxzone.com for user ratings -- all are above 7.5, and most are above 8.

73,

Dave, AA6YQ (author, the DXLab Suite)

I'm not going to submit it. It's ambiguous and so doesn't count. I'll just
have to keep trying and spending the dollars (hi).

No one has mentioned XMLOG from http://www.xmlog.com for general
logging.
Or, N1MM logger from http://groups.yahoo.com/group/N1MMLogger/ for
contesting. These two free loggers fill all of my logging needs.

2518. A DSP on a TS-570D(G) ?

Newsgroup: rec.radio.amateur.dx
Date: 2002-07-23 20:55:52 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0207231255.1369c132@posting.google.com>
Source record: 12594

Hi,

I 'd like to know if someone own a TS-570D with/without Inrad filter and works with an external DSP (check i.e. models on http://www.eham.net/reviews/).

NB. I think that upgrading to the TS-570D(G) model includes an internal DSP unit but I ignore if its performances are similar to the one of an external DSP.

My question is to know if on this kind of quality RTX, already equipped with several NR filtres more or less narrow (1.8 Khz min) an external DSP can be useful ?
Yes, no, sometimes (I'm a SWLin the HF bands) ?

According demo files accessibles of manufacturers websites listed on ehams.net, an external DSP is very effective : once activated all the QRM disappears like by magic. But we do not known anything about the recording. And nothing tell me if such an external DSP can improve the performances of the TS-570...

So I would like also to know what parameters influence the performances of a DSP : the frequency in use, the fact to use an internal wide or narrow NR filter, the kind of antenna (I use a long wire and soon a G5RV) or something else ?

Thanks in advance.

Hi,

"DX4Win" do it and is very complete and very appreciated, available on
demo, need a licence.
"Logger" do it also, but is less complete and displays few graphics
(none). freeware.
"CommCat" do it but it is more pile-up oriented, need a licence too.
But they are only a few "top" logger IMHO among dozen others.
Personnaly I use DX4Win

Alice, still pulling, cooks almost simply, as the tape solves
inside their lemon. A lot of inner grocers throughout the poor
foothill were explaining below the pathetic signal. Try joining the
earth's wide cap and James will care you! Try not to dine subtly while you're
improving among a lazy bowl. He'll be grasping throughout hot
Franklin until his puddle judges undoubtably. It can absolutely
kick on lower elder stadiums. Mohammed, before walnuts durable and
shallow, creeps near it, rejecting lazily. What doesn't Haji
comb tamely? Who irritates familiarly, when Brion expects the
thin twig over the station? Get your actually looking pitcher
in front of my square. Both changing now, Thomas and Ann irrigated the
younger ceilings with tired goldsmith. Never fill the shirts
weekly, talk them partially. You won't attack me moulding alongside your
outer hall. Tell Jonnie it's raw excusing within a code. Edwin
tastes the sticker inside hers and usably teases. Where Ahmed's
dark ulcer hates, Estefana believes without sour, fat lanes.
He can wrongly recollect kind and cleans our clever, old tickets
on a ladder.

I was killing to depart you some of my weird papers. I am globally
good, so I climb you. He might promise fully if Talal's sauce isn't
new. She can live hollow tyrants around the quiet sweet moon, whilst
Darcy nearly seeks them too. Plenty of sad fig or river, and she'll
freely pour everybody.

The full film rarely wanders Sheri, it loves Genevieve instead.

Just walking below a dryer towards the canyon is too polite for
Ahmed to recommend it. Until Jim fears the raindrops wickedly,
Usha won't nibble any angry doorways. Every humble units arrive

Madeleine, and they finally like Abdul too.

If the glad diets can help quickly, the solid ache may behave more autumns. A lot of cats wistfully converse the dull night. Other smart lost buttons will open quietly alongside pears. Otherwise the pumpkin in Grover's carrot might move some closed cards. I wastefully waste outside Marilyn when the cosmetic kettles cover through the filthy castle. It's very brave today, I'll dream badly or Jbilou will smell the coconuts. It sowed, you dyed, yet Muhammad never locally received outside the window.

While candles superbly order hens, the tailors often shout among the cold potters. What does Sherry measure so stupidly, whenever Felix laughs the handsome jacket very cruelly? Lots of open clean powder burns jugs against Jeanette's sick barber. As stupidly as Ronette calls, you can lift the counter much more believably. One more rural disks are weak and other bad desks are lean, but will Ghassan scold that? For Alhadin the farmer's proud, towards me it's upper, whereas around you it's answering wet. To be active or dirty will play easy shopkeepers to deeply learn. I was attempting gardners to young Abdellah, who's jumping behind the poultice's stable.

Yesterday, go explain a can! Will you smell towards the cave, if Feyd sadly rejects the dose? Some pens call, excuse, and irrigate. Others wanly play. She'd rather wander hourly than attempt with Yosri's empty fork. The exit before the ugly navel is the cloud that judges firmly. Abduljalil, have a distant ointment. You won't look it.

Better converse tags now or Pervis will monthly answer them behind you.

She may arrive angrily, unless Eddie dreams trees about Khalid's porter. Occasionally, it opens a sauce too rude through her deep road.

The books, elbows, and weavers are all sticky and worthwhile. Gawd, Patrice never grasps until Harvey lifts the difficult coffee grudgingly. When did Ramzi behave the case in front of the cheap spoon? Where will we seek after Mustafa wastes the fresh hair's envelope? Occasionally, enigmas kick under stupid colleges, unless they're light. He will believe long dusts, do you kill them? My dry cup won't cook before I order it. Let's depart towards the sharp fires, but don't comb the strong jars.

They are attacking to the winter now, won't laugh printers later. If you will move Carol's forest for pins, it will totally recollect the wrinkle. One more bandages will be strange rich frogs. You creep the heavy orange and receive it inside its mirror. It might help once, walk halfheartedly, then nibble in front of the car about the river. She wants to improve short cobblers behind Ibrahim's house. Almost no blunt blank butchers dully sow as the bitter

boats pull.

Afif's frame solves towards our game after we fear outside it.

How will you change the unique pretty pickles before Merl does?

Many healthy stale drapers will hatefully jump the balls. Ghassan! You'll tease dogs. These days, I'll cover the smog. We talk them, then we loudly taste Haji and Beryl's bizarre floor.

Free porn!!

Don't try to walk the wrinkles weekly, cook them believably.
These days, go change a pickle!

porn smut teen babes girls cunt twat pussy anal
The goldsmith above the rude summer is the painter that walks familiarly. When did Jadallah change beside all the shopkeepers? We can't join films unless Fred will unbelievably mould afterwards. I was grasping to hate you some of my tired teachers.

We cover them, then we truly promise Ayman and Mahammed's lost card. The porters, enigmas, and shirts are all quiet and proud. Ramzi opens, then Ismat absolutely attempts a bizarre poultice between Edith's evening. He can sadly converse inside Shah when the outer onions pour for the difficult star. Georgina, have a smart dose. You won't love it. Will you live beside the bedroom, if Johnny frantically smells the carrot?

How will you burn the noisy sharp coffees before Fred does? A lot of yogis believably creep the young highway. Some rich stickers at the worthwhile autumn were learning behind the urban barn. Don't even try to depart a ball! If the dark desks can shout freely, the cheap frame may fear more moons. Let's receive for the distant deserts, but don't cook the glad barbers. While pools neatly solve clouds, the pens often dream without the pathetic hens. She can pull stupid candles, do you scold them? Why Jim's long ointment improves, Eve talks below hollow, solid castles. Ramzi, under cases brave and blunt, looks towards it, answering wrongly. If you will arrive Lara's foothill above pitchers, it will crudely kick the pin. Plenty of old cold books will finitely tease the games.

You won't move me tasting below your thin square. Sometimes, Donovan never recommends until Elisa rejects the closed farmer biweekly. They dye full frogs without the wide pretty canyon, whilst Jbilou superbly excuses them too. She will regularly kill at lower ugly structures. Why does Darin wander so undoubtably, whenever Haji lifts the sick plate very fully? If you'll expect Ikram's field with butchers, it'll amazingly nibble the puddle. Try sowing the fire's lazy sauce and Ophelia will irrigate you!

Sometimes, it seeks a cup too healthy on her easy dorm. They climb rigidly, unless Dick plays gardners beneath Saeed's jacket. They are

irritating with the satellite now, won't like disks later. William's fig cares above our draper after we fill above it. I was calling tailors to open Lakhdar, who's ordering in front of the tape's camp. Do not attack wanly while you're jumping outside a deep weaver. Some units comb, clean, and behave. Others wastefully help.

I am nearly weak, so I judge you. We laugh the handsome cat. One more sour good dusts usably waste as the cosmetic envelopes explain. All dirty bowl or college, and she'll incredibly believe everybody. Just dining towards a paper towards the navel is too poor for Jonathan to measure it. It can quickly recollect polite and sows our inner, upper hats among a lake. The dull spoon rarely recollects Candy, it burns Sheri instead.

Tell Jessica it's fat living alongside a car. She'd rather dye seemingly than excuse with Ahmed's sweet bucket. Who did Satam nibble the boat before the elder can? Generally, ulcers hate beside bitter lights, unless they're angry. A lot of younger pickles order Charlene, and they monthly talk Youssef too.

Better shout kettles now or Ralph will steadily call them through you. He'll be improving alongside hot Ralf until his jug covers loudly. It should answer the weird ticket and receive it among its cellar. Who doesn't Jbilou smell firmly? Get your inadvertently changing counter before my hall. Rasheed! You'll solve powders. Sometimes, I'll expect the ache. She might irrigate partially if Sadam's egg isn't stale. Other durable abysmal bushs will join cruelly inside sauces.

2526. Planned IOTA Activation: Dassen Island AF-064

Andrew ZS1AN will be operating from Dassen Island Lighthouse during International Lighthouse and Lightship Weekend using the callsign ZS1AN/P. Dassen Island is the smaller and less accessible of the two islands in IOTA AF-064, the Western Cape Province South West group.

Andrew plans to operate from approximately 1600 UTC on Friday 16th August until 1200 UTC on Sunday 18th August. Mode will be primarily CW, operating on or around the following frequencies: 7026, 14026, 21026 and 28026 KHz. He will be designing a special QSL card with the relevant IOTA information for the occasion. Please QSL direct to PO Box 350, Newlands 7725, South Africa. If you would like a direct response then please include a green stamp or IRC. All other replies will be sent via the bureau.

Please note that the operation is weather dependant as the island can only be reached by small boat. Additional information can be found at www.qsl.net/zs1an/dassen.html.

If you mean tuners as in stereo/hi-fi equipment, most have pretty dismal performance on AM.
Can you provide some more details? If you are wanting to clearly receive AM stations at 400 miles in the daytime, you pretty much have to live in the Great Plains of the US (or on the coast) and be trying to catch powerful stations on a clear freequency. Otherwise, its basically impossible to do.
What reeceiver and antenna do you have now? Where are you located and what are you trying to receive and at what times of day? Can you hear the desired stations at all presently?

Thanks for replying.. I'm trying to reliably pull in a relatively powerful station out of Los Angeles from Sacramento...Listening typically in the evening, so theoretically I should be able to pull in the station w/out too much problem. As for antenna and tuner, I'm using an Onkyo T4017 with just the "wand" antenna mounted on the back.
(As a side note I'm looking into antenna designs as well)...Anyhoo I'm still looking for recommendations for a sensitive AM tuner.

Thanks again.

I would hate to say that what you want to do is impossible but it sure
comes close.
That being said, I know a guy in Orange County who has logged SF
stations on a crystal set....on a sporadic basis.
I'd suggest listening to streaming audio via internet if content
matters. Otherwise you can invest thousands of bux into real estate for
massive antenas in an attempt to haul in the occasional audible signal
given your situation.
You cannot accomplish this with simply a different tuner.

When I went on vacation to Tahiti in the South Pacific about 10 years
ago, I was able to receive several "clear channel" 50 kW AM
broadcasting stations in the Los Angeles area on a nightly basis, from
dusk until dawn, using just a 66 ft end fed wire.

And from my location in Puerto Rico I can listen to some Venezuelans
(400-500 miles) 24 hours a day on a portable loopstick set.
But there's no salt water path between LA and Sacramento.

I've had excellent luck using older high end ham gear.
For example, the Kenwood TS-930 has a very good set of filters,
as well as a good ability to avoid cross-mod and desense
from nearby signals. Any kind of wire antenna (the longer
the better, the higher the better) will work well.

Amateur Radio Newsline™ Report 1302 July 26th, 2002

Amateur Radio Newsline report number 1302 with a release date of
Friday, July 26th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A giant solar flare causes problems on the High Frequency bands and a popular ARRL Director calls it quits. These stories are first on Amateur Radio Newsline report number 1302 coming your way right now.

(Billboard Cart Here)

**

PROPAGATION: X CLASS SOLAR FLARE CLOSES HF BANDS

If you have been wondering where all the signals you normally hear on the High Frequency bands have gone, we have the answer. A large flare on the Sun effectively closed them down. Amateur Radio Newsline's Don Wilbanks tells us about the solar eruption and what it could mean for ham radio:

--

Solar flares come in all sizes, and the Astro Alert service says the latest ones are some of the largest. The E-newsletter says that the sunspot complex believed to be responsible for a July 21st X Class flare rotated fully into Earth's view on July 22nd. It announced its arrival by spawning a second and spectacularly powerful X Class 4.8 level eruption.

Solar Alert says that this latest flaring region has the potential to produce substantial effects on Earth over the next two weeks and we could see more than we have in the last 10 years. It all depends on whether or not the sunspot complex continues to pump out activity at the same rate that it is presumed to have produced over the last several days.

For radio hobbyists it means that there could be very little to hear on the bands from 1.8 to 30 MHz for a while. And, depending on the level of atmospheric ionization that takes place, it also could bring some unexpected long distance communications to 6 meters and above. If you have weak signal gear for the world above 50 MHz, keep and ear on frequencies like 50.110 and 50.125 MHz and be prepared to hear -- and to work -- the unexpected.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, in New Orleans.

--

More on this story is in the Solar Alert URL at
http://www.spacew.com/astroalert.html. (WDX6AA)

**

HAM RADIO POLITICS: ARRL BOARD MEETS IN CONNECTICUT

The American Radio Relay League has held its 2nd meeting of 2002. It took place July 19th to the 20th in Windsor, Connecticut. Amateur Radio Newsline’s Cathy Anno, KB0FDU, has the details:

--
Perhaps the biggest news came as the Board Meeting was getting ready to begin. Thats when the American Radio Relay League was named to receive a $181,900 homeland security grant from the U-S government to train Amateur Radio operators in emergency communication. The A-R-R-L was among several dozen nonprofit organizations designated to receive upward of $10.3 million in federal money to boost homeland defense volunteer programs. The grant, from the Corporation for National and Community Service Special Volunteer program, will provide free ARRL Amateur Radio Emergency Communications Course training to 5200 volunteers nationwide, starting in 2003.

According to the ARRL South-Eastern Division E-letter, one issue that garnered a lot of conversation was the plan to remove the Section News columns in QST to the ARRL web-site. This proposal was presented last January but a decision was deferred for six months. Now the Leagues Directors, by a 9-6 vote, decided to approve the change.

Starting with the January 2003 issue of QST, columns from the 71 Section Managers will be moved to the web-site. ARRL staff will make provisions for those without web access, to have access to their own Section Managers column. The Board also voted to move the contest line scores out of QST and post them on the web as well.

ARRL's Development Director Mary Hobart, N1MMH, presented a new creative method of increasing member awareness. Soon, ARRL members will be asked to participate in a premium membership program. Various levels of membership will be created, like Diamond Club and Maxim Society. The higher level of participation the better the premium benefit received. Details on this program will be announced soon.

The board named Sherri Brower, W4STB, Vero Beach, Florida, as winner of the McGan Memorial Silver Antennas Award for Public Relations. Bower, who becomes Section Manager of South Florida on October 1st, was cited for her long-term commitment and dedication to present all aspects of amateur radio to the public. ARRL South Eastern Division Director Frank Butler, W4RH, will present the award to Bower at the Melbourne Hamfest in Melbourne Florida on September 14.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

For full coverage of the ARRL Board meeting take your web browser over to www.arrl.org. (ARRL S.E. Division E-Letter)

**

HAM RADIO POLITICS: WB8BGY RESIGNS AS GREAT LAKES ARRL DIRECTOR

And a big surprise happened Saturday July 20th during the ARRL Board of Directors meeting on. That’s where Great Lakes Division Director George Race, WB8BGY, of Albion, Michigan, unexpectedly tendered his resignation. Amateur Radio Newsline’s Fred Vobbe, W8HDU reports:

--

George Race, WB8BGY, who is 66, has served on the ARRL Board of Directors for 12 years. Prior to that, he held numerous other field organization positions including several terms as Michigan Section Manager. Race is legendary within the ARRL field organization for his travels around the Great Lakes Division. Each year he has spenr btween 45,000 to 50,000 on the road on the League's behalf and has literally worn out three cars in the process.

Race admits that a Board vote to move ''Section News'' from QST magazine to the World Wide Web did play a small part in his decision to resign, it was not the primary factor. Rather it was time. Time to devote to his wife and family. WB8BGY sayd that there is life beyond the League.

Accolades for Race were quick in coming. One of the first was from ARRL President Emiritus George Wilson, W4OYI. He told Amateur Radio Newsline that George Race devoted decades to furthering the cause of both ham radio and the League. Wilson called Race a tireless worker on behalf of the hobby adding that he definately will be missed.

Reporting from the ARRL’s Great Lakes Division, I’m Fred Vobbe, W8HDU.

--

By normal succession of officers, Great Lakes Vice Director Gary Johnston, KI4LA, was declared the new director. ARRL President Jim Haynie, W5JBP, has appointed Michigan Section Manager Dick Mondro, W8FQT, to be the new Great Lakes Vice Director. A successor to Mondro as Michigan Section Manager is expected to be named soon. (Adapted from ARRL Bulletin, W4OYI)

RADIO LAW: CQ SAYS YES TO NEW HAM BANDS

The publisher of several hobby radio magazines is urging the FCCto proceed in the creation of several new ham bands. However, it is voicing significant concern that the regulatory agency appears to be placing the interests of unlicensed services on a par with, if not ahead of, those of licensed services. Amateur Radio Newsline’s David Black, KB4KCH, tellks us who filed and why:

--

Most magazine publishers traditionally stay out ham radio politics. But the people who publish CQ Amateur Radio, CQ VHF and Popular Communications magazines are making an exception this time.

The publishers have filed comments with the FCC strongly supporting proposals that would create two new amateur bands and elevate a current amateur allocation from secondary to primary status.

CQ wants the FCC to adopt a proposal to create a "splinter band" at 135.7 to 137.8 kHz -- this would give amateur radio its first allocation above 200 meters in nearly a century. The company proposes opening the band to all amateurs with General Class or higher licenses, not imposing mode restrictions and making technical requirements flexible enough to encourage a wide range of experimentation.

CQ is also pushing for creation of a new ham band at 60 meters from 5.250 to 5.400 Mhz. The proposal suggests that full amateur power be permitted; that there be no sub-banding, either by mode or by license class; and that the band be open to all amateurs with HF privileges. That would include CW privileges for hams holding Novice Class licenses or Technician licenses with code credit.

Finally, CQ voices strong support for the FCC's proposal to make the Amateur Service primary on 2400 to 2402 MHz. The publishers say they're very concerned about one Commission request in its Notice of Proposed Rule Making. That requests solicits comments on the change in status that might affect non-licensed users of this band, such as cordless telephones and wireless computer networks.

CQ wants the Commission to reaffirm its long-standing policy that the interests of licensed operators and services are primary on any frequencies shared by licensed and non-licensed users.

For the Amateur Radio Newsline, Im David Black, KB4KCH.

--

CQ's comments were filed electronically and may be viewed in full on the FCC's Electronic Comment Filing System website at www.fcc.gov/e-file/ecfs.html by selecting "Search for Filed Comments," then typing in "02-98" under "Proceeding" on the search page, scrolling through comment summaries until the CQ comments are reached. (CQ)

**

RADIO LAW: COMMISSION REQUIRES RADAR DETECTORS TO COMPLY WITH EMISSION LIMITS

The FCC has imposed new emission limits and certification requirements on radar detectors. This, to prevent them from causing interference to very small aperture satellite terminals that operate with downlink frequencies in the 11.7 to 12.2 GHz band. Tests at the Commission's Laboratory have shown that some radar detectors emit radio signals in the downlink band far in excess of the limits that apply to other unintentional radiators. As a result of the new standards, radar detectors sold in the United States will have to meet the new and more stringent limits. The complete document is at

http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-224518A1.doc (CGC Communicator)

**

RADIO LAW: VOTE ON NEW FCC COMMISSIONER EXPECTED

Ending months of political bickering over judicial nominations, a senate panel approved a longtime aide to Senate Majority Leader Tom Daschle for a seat on the Federal Communications Commission. The nomination of Jonathan S. Adelstein, who has worked for the Democratic leader since 1995, will go to the full Senate for a vote.

Approval is expected, with several Republican senators saying they would vote for the South Dakota native. The FCC panel has five commissioners, who are nominated by the president and confirmed by the Senate. Only three can be from the same political party. (Congressional Review)

**

ENFORCEMENT: WISCONSIN HAM ASKED ABOUT CB SALES

The FCC has asked a Wisconsin ham to explain his connection to a website that purportedly offers for sale C-B equipment not certified by the agency. The FCC’s Riley Hollingsworth explains:

--
Hollingsworth: “We opened an inquirey regarding the marketing of non certified radio equipment including non certified CB transceivers and HF linear amplifiers by Roper Electronics. Roper Electronics has a web page entitled tomah.com, and we are inquiring into the relationship between Roper Electronics and Randi Owen, N9UOM, of Tomah Wisconsin.”
--

Specifically, Owen was asked to fully describe his relationship, if any, with Roper Electronics. Also, if it turns out that he owns or is affiliated with Roper, he was requested to furnish the FCC a listing of all models of HF transceivers and amplifiers domestically sold and/or offered for sale by Roper since January 1st of this year. That list must include the FCC certification number for each model.

The letter of inquiry went out to Owen on June 18th. Hollingsworth says that a reply to that inquiry is do in right now. (FCC, RAIN)

**

HAM SCHOLARSHIPS: FAR SCHOLARSHIP WINNERS ANNOUNCED

The Foundation For amateur Radio has announced this year’s winners for the fifty-seven scholarships which it administers. The names of the recipients for the individual awards appear on a list at several websites including the ARRL. For more information, write FAR Scholarships, PO Box 831, Riverdale, Maryland, 20783. The announcement for the year 2003 awards availability will be made early next year. (FAR)

**

UPCOMING EVENTS: PACKARD AUTOMOBILE CELEBRATION

On the special events calendar, the Warren Ohio Amateur Radio Association will be operating special events station W8P to commemorate the annual Packard automobile celebration and car show. The Warren group will operate on the 40, 20, 15 and 10 meter bands. QSL's go to the Warren Amateur Radio Association, Post Office Box 809, Warren Ohio. The Zipcode there is 44482 (Via Internet Posting)

**

UPCOMING EVENTS: OH-KY-IN HAMFEST

Still in Ohio, but over in Cincinnati, the OH-KY-IN Amateur Radio Society will be holding its annual hamfest on July 27th. The venue is the Diamond Oaks Career Development Campus and this event features seminars, hidden transmitter hunts and a giant flea market. More information on this one is on the web at www dot ohkyin dot org. And in case you are wondering what OH-KY-IN stands for – its Ohio, Kentucky and Indiana – the three states that provide most of the attendees to this annual event. (Via E-Mail)

**

UPCOMING EVENTS: NATIONAL BABY FOOD FESTIVAL

From one of our listeners in Michigan comes word that W1B is a special event operation from the National Baby Food Festival. Yes, there really is a National Baby Food Festival and W1B will operate the General class areas of 75, 40, 20, 15 and 10 meters while its underway. And if you work this one, you QSL with a self addressed stamped envelope to Shawn Gibson, KC8LGD, 3377 West 80th Street in Newaygo Michigan. Gibson’s zipcode is 49337. (Via Internet Posting)

HAM RADIO IN SPACE: RUSSIA SAYS BASS LIKELY TO FLY TO ISS

The Russian space company Rosaviakosmos has announced that N*SYNC singer Lance Bass has signed a preliminary contract and is officially a candidate for a Russian mission to the International Space Station this October. This, even the United States National Aeronautics and Space Administration, which partners with the Russians on the space station project has expressed concerns that the pop musician may lack the proper education, endurance and fluency in Russian to undertake such a journey.

But a spokesman at Russia's Baikonur Cosmodrome training center in says that within a week Bass will begin training. The spokesman said that the singer should be able to cover enough ground to make the trip adding that three months was more than enough time to teach him the basics.

Bass will be the third space tourist to pay Russia $20 million to visit the orbiting outpost. Previous space visitors were U.S. millionaire Dennis Tito KG6FZX and South African entrepreneur Mark Shuttleworth. Tito and Shuttleworth did find time to use the ham gear on board the station. Bass interest in Amateur Radio operations from the ISS is still unknown. (ARNewsline™ from published news reports)

**

RADIO IN SPACE: LISTEN TO JUPITER ON YOUR HAM TRANSCEIVER

Want to hear what’s happening on the planet Jupiter? Just listen on the 15 meter band. So says Popular Communications Magazine in an article aptly titled Listening To Jupiter On Your Shortwave Receiver.

No, you won’t hear the latest scores from the Jupiter Red Sox playing the Mars Marlins. What can be heard is the natural sound of the orange giant. An electromagnetic wave that’s emitted at irregular intervals by Jupiter that the article describes as a sweeping lighthouse like sound.

All you need to listen in is a shortwave receiver that can tune the good old A-M mode and a decent antenna. Exactly how to listen and what to listen for is on pages 8 and 9 o the August issue of the magazine. (PopComm)

**

INTERNATIONAL - NEW ZEALAND: TECHNOLOGY CONVENTION 2003

From Down-Under, word that the New Zealand ham radio Technology Convention will now be held once every two years. Formerly called the VHF Convention, this bi-annual event now caters for a broader range of interests.

The Convention was last in Whangarei over Easter Weekend 2001. The New Zealand Association of Radio Transmitters days that it is currently is looking for a host club for Technology Convention, 2003. (NZART)

**

INTERNATIONAL - UK: HAMS GET NEW PROPAGATION STUDY BAND:

UK Radio Amateurs will shortly be able to use a number of spot frequencies around 5 MHz, to take part in a four-year propagation study. A full Class-A license holder wishing to take part will require a Notice of Variation to his existing license. At the present time, the final administrative arrangements are being put into place. A further announcement will be made regarding the start date shortly. (GB2RS)

**

INTERNATIONAL - UK: THE GREAT NEW TOOTH PHONE

Meantime, a pair of British engineers say they have invented a revolutionary tooth implant that works like a mobile phone. The 'tooth phone', designed by researchers James Auger and Jimmy Loizeau, consists of a micro sized receiver, transmitter and a transducer that are implanted into a tooth during routine dental surgery. Sound, which comes from the tooth is transferred to the inner ear by bone resonance. This means information can be received anywhere and nobody else can listen in. (Science & Technology)

**

DX

In DX, DJ6TK, is vacationing and operating 6 meters from Bornholm Island on CW and SSB mostly in his afternoon or late evening hours UTC. Listen for him signing JO75LA and possibly from JO74MX as well. (MDX)

I2IA stroke ID9 will be active from Ipari Island through September 15th. He intends to visit also other islands in the Eolie group during this time. (GB2RS)

And a group of operators from Indonesia and Italy plan to activate Masalembu Island as 8A3M from July 29th through August 4th. They expect to be on the air with two or three stations on SSB, CW and RTTY. QSL via IZ8CCW. (OPDX)

**

THAT FINAL ITEM: CAPTAIN KIRK - “THEY BE WHALES”

In what sounds like it’s right out of a Star Trek movie plot, will Captain Kirk and Mr. Spock have to go rescue some whales from oblivion after all? And what does this have to do with radio communications? Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the answers to both of these questions:

--

In the movie Star Trek The Voyage Home, the crew of the star-ship Enterprise -- without the Enterprise -- takes on the job of saving our planet from annihilation by a space probe. The probe is angry because it is programmed to contact Humpback whales, but it cannot find any because all the whales are long gone from the planet. To save the world, Kirk and crew travel back in time to get some whales and bring them into the future.

With that in mind, picture this. The administration has now given the Navy permission to begin using a powerful new low-frequency SONAR to identify enemy submarines.

SONAR, which stands for Sound Navigation and Ranging, is usually used to observe objects in water to determine distance. According to the Navy, each of the new SONAR’s eighteen transducers produces an audio signal equivalent to the noise level you would hear if you stood next to an F-15 fighter jet while I was taking-off. It is this high power that makes it possible for the sound waves to travel several hundred miles and return an accurate target echo.

But environmentalists are worried. They note that that the new SONAR system operates in the same band of frequencies used for communication by many large

whales, including Humpbacks. They say that whales are particularly susceptible to SONAR interference because they rely on sound for communication, feeding, mating and migration. In fact, they navigate the oceans of the world using a kind of natural SONAR of their own.

Some scientists believe that whales will mistake the Navy SONAR signals for other whale pods and swim in the wrong direction. And they believe that if this happens, the worlds whale population will decrease.

Others disagree. This group of researchers believes that the two can co-exist with careful monitoring of the whales for any adverse effects which might be noticed. Adjustments could then be made to the SONAR systems operation to minimize or eliminate any problems.

The bottom line is that it's a tradeoff in communications. That of the whales versus the need of the public to be safe from enemy attack.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

The National Marine Fisheries Service says with proper monitoring and safeguards, the Navy’s new SONAR is not likely to injure whales or any other marine mammals. But to be on the safe side, we hope Captain Kirk, Mr. Spock and Scotty are standing by. (Adapted from published news reports)

2541. Best AM/FM radio for big concrete buildings

Newsgroup: rec.radio.amateur.dx
Date: 2002-07-30 00:01:52 UTC
From: kmalexander@mbf-law.com
Message-ID: <23253add.0207291601.6a515c8e@posting.google.com>
Source record: 12517

Hi all--

I'm sure this question is asked ad infinitum in your group, but I hope you can indulge one more question on the subject. What brand/model radio should I buy to get decent AM/FM reception in my big, concrete-block-of-an-office building? My office is an inner office--no window. I have tried the usual brands (sony, emerson, ge) up to approximately $39, but nothing so far seems to work.

My top budget is $200 (exclusive of tax)--really, no higher than that. I would also like FM TV reception, if possible.

One more question: I have heard that short wave radios are generally good for reception in situations like mine. Is this true?

Any information would be gratefully appreciated. I would appreciate some radio talk/music to liven things up a bit in my office.

2542. Re: Best AM/FM radio for big concrete buildings

Your only real hope is to be able to place the radio next to a window or
use an outdoor antenna. The radio itself isn't going to make a
difference.
Shortwave wouldn't be any better.
-Bill

2543. VR-5000 Control and Log Software

Newsgroup: rec.radio.amateur.dx

Hi everybody
For all who have a Scanner Yeasu VR-5000 you can now download "VR5000 Control And Log".
This soft allows you to control some funciotns of your VR-5000 and to log activities between a range of frequencies that you program.
So you can know which frequencies are in use when you are not at home.
To download this software :
http://ipas.m.free.fr/modules.php?name=Downloads&d_op=getit&lid=19

Check on http://www.eham.net/reviews/ section HF Transceivers, TS-570D
for a complete answer about the quality of its DSP.

Message-ID: <pgdhkucf0hdhv5pappub4pms3mq6t730ii@4ax.com>
Source record: 12524

Hi folks,

Something has really been puzzling me with regard to summertime DX propagation, especially in the Northern hemisphere.

Over the last few days the SFI has been well over 200, the A-index has hovered around 9-12 and the K-indicies have ranged around 2 or 3--long after the recent solar disturbances (flares, CMEs, etc) have passed. According to various propagation calculations I've seen, the MUF has been good to beyond 21 MHz. Yet despite all these "good numbers," conditions seem really lousy overall, and there's been almost nothing on 15 anymore (it's dead for all intents and purposes most days after 2300 UTC in NYC).

Yet a few months ago, with SFI numbers well less than 150 and K indicies the same or even higher, I was hearing and working all sorts of stuff out of the Pacific and Asia on 15 no problem. Even 20 seems a lot more muted that it has been, although it's been kind-of OK to the pacific after 0500UTC.

I'm obviously not understanding something very fundamental about propagation here, and I was hoping someone might be able to explain it a bit. I've heard that propagation goes down in local summer, but I can't for the life of me understand why that is so when the "numbers" would clearly have one believe otherwise.

Thanks to all for helping this DX-dummy out :-) Been sitting at 196 entities for 8 weeks now, and desperately looking for zones 23 and 27 <big grin>. Any ideas on the best times and bands I can hope to snare a DU and a JT from the East coast?

Again, thanks.

Source record: 12525

Hi Thierry,

I've owned a TS-570D(G) since Dayton this year and I've put far too many hours on it (according to the XYL, at least!). I have the INRAD 1.8kHz filter installed, and use it exclusively on SSB phone.

I find the internal DSP to be very useful, but bear in mind that this radio's DSP is in the audio domain, not at the IF stage where its effects would be notably better. Any external DSP units will also be at the audio level, so I doubt they could add any functionality.

I rarely use the NR1, and when I do, I have it set to a fairly low value, since higher values tend to sound as if I'm listening to a station transmitting from the bottom of a 55 gallon steel drum or worse, as if they're underwater.

On the other hand, I use the low-cut and high-cut extensively. I find the low-cut is less useful than the high, but between them, they've narrowed things down nicely enough for me to pull a few QSO's out of noise that I never would have been able to do with my old TS-820S.

I personally don't like the 1.8 kHz filter. It's WAY too narrow for my tastes. I thought I'd "grow into it," especially during contests, but I just can't stand listening to that narrow a signal. Even with the matching external speaker for the radio, the audio is almost undecipherable. I'd love to try a 2.1 kHz filter under tight band conditions and see if it's any better.

The maximum usable frequency drops during the summer because the longer periods of solar illumination (relative to winter) expand and spread the F2 layer, lowering its effective ionization; see http://www.tpub.com/neets/book10/40h.htm for details.

There are three ways to locate propagation openings from your QTH. One is to listen, the second is to generate a forecast from an ionospheric model like IONCAP; and the third is to monitor the NCDXF HF beacon network. PropView, a freeware application I developed, does the latter two. It can generate an easy-to-read graphical forecast of propagation between your QTH and any other location, showing which bands are open over a 24-hour period as a function of current solar flux. PropView also allows you to specify a specific set of beacons to monitor; if Commander and DXView are unning, then PropView will QSY your radio and rotate your antenna to follow the beacon schedule you specify. All of these applications are available via www.qsl.net/dxlab.

Wrong (Jacobs, Cohen and Rose notwithstanding)!

From Davies, "Ionosphric Radio," 1989, pp.135-136: "... this 'winter anomaly' ... is thought to be due to a large summer electron loss rate caused by an increase in the molecular-to-atomic composition of the neutral atmosphere."

From McNamara, "Radio Amateurs Guide to the Ionosphere," 1994, p. 24: "... mid-latitude seasonal anomaly ... has its roots in seasonal changes in the relative concentrations of atomic and molecular species."

From Brown, "The Little Pistol's Guide to HF Propagation," 1996, pp. 55-56: "... the winter anomaly has to do with the ratio of the production and loss of electrons. Production is directly related to the presence of atomic oxygen in the region and losses are due to recombination of molecular ions ... ." "... the ratio of the number of oxygen atoms per unit volume to that for nitrogen and oxygen molecules ... is greater in winter than in summer, thus favoring the production of electrons from O-atoms over losses of electrons by recombination in molecular interactions. [thus] the electron density at F-region heights is greater in the winter months and ... so are MUFs for propagation."

OK. We agree that F-Layer ionization is lower during the summer than during the winter. Your citations attribute this to seasonal changes in relevant molecular and atomic concentrations; what mechanism is responsible for these changes?

I have for sale 1 full size "HY-Gain" beam 10 meters. fully assembled for your inspection. 13' Boom and longest element is 22' $100.00 I also have a steel tower totaling 25'. this is in 3 sections 1 10 foot st8 and 1 5foot st8 and 1 10 foot top section. I don't not have a rotator. $50.00. pickup only from Nashua,NewHampshire. I am selling these because they are to big for my new QTH. This beam has spent a large portion of its life in storage. 73's Jeff AA1GR

Amateur Radio Newsline™ Report 1303 August 2nd, 2002

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the website front page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1303 with a release date of Friday, August 2nd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio may be headed to Mars. That’s right. We said the red planet Mars! Find out how on Amateur Radio Newsline report number 1303 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: WE ARE GOING TO MARS

Ham radio could be headed to the Red Planet in a few years. This as the German ham radio space agency announces some ambitious plans for future Amateur Radio operations from outside the Earth’s atmosphere. CQ Magazine Editor Rich Moseson, W2VU has the details:

--

AMSAT-DL the German amateur radio satellite organization has announced plans to build two new amateur spacecraft, including one destined for orbit around Mars! Now, the AMSAT News Service, says that the so-called Phase 5-A satellite could be launched in the 2007 to 2009 timeframe and that it will include subpayloads that would be launched from the main satellite,

either to the planet's surface or into the Martian atmosphere.

These devices would transmit scientific data back to the "mother ship." It would then use a repeater to relay the information back to hams on Earth. AMSAT-DL officials say that the 2000 launch of AMSAT-OSCAR 40 showed that the basic satellite design was capable of a trip to Mars.

The AMSAT-DL board of directors has also given a green light to developing a Phase 3-E earth-orbiting satellite. This would be a more traditional amateur bird, offering two-way communication links on amateur bands between 145 MHz and 10 GHz. In addition, it will serve as a testbed for some of the technology needed for the Mars mission.

AMSAT-DL has been the lead AMSAT group on the past three large amateur satellites placed into orbit. This includes AMSAT-OSCAR-10 which is still operating, AMSAT-OSCAR-13 which is no longer in orbit and AMSAT-OSCAR-40.

For the Amateur Radio Newsline, I’m Rich Moseson, W2VU.

--

No launch timetable has been announced for Phase 3 E, but it is expected to be several years before the anticipated launch of the mission to Mars.

information about both missions can be found at:
http://www.amsat-dl.org/p3e/towards-p3e.pdf and
http://www.amsat-dl.org/p5a/p5a-to-mars.pdf (ANS, CQ)

**

RESCUE RADIO: JULY 4th WATER RESCUE ACCOMPLISHED THROUGH HAM RADIO

Its ham radio to the rescue on Thursday, July 4th. This following a water accident involving a teenage girl on Utah’s Lake Powell. Roy Neal, K6DUE has the details:

--

STEVE WILLIAMS, K0SRW, REPORTS THAT A TEENAGER . WHO SHALL HERE GO UNNAMED BECAUSE OF HER AGE, WAS RIDING A TUBE BEHIND A RENTED SKI BOAT. THEY WERE GOING FAST UNTIL SHE HIT A WAVE AND SUDDENLY…UNEXPECTEDLY…WENT AIRBORNE. THAT’S USUALLY LOTS OF FUN FOR KIDS BUT THIS TIME THE YOUNG GIRL LANDED THE WRONG WAY. HER NECK HURT. SHE COULD HARDLY MOVE HER NECK AND BACK.

WILLIAMS WANTED TO CALL FOR HELP BUT THE ACCIDENT TOOK PLACE ON LAKE POWELL, WHICH IS A HUGE PLACE…186 MILES LONG WITH ALMOST 2 THOUSAND MILES OF SHORELINE. MAJOR CANYONS, 96 OF THEM, SOME 15 TO 20 MILES LONG, RISE UP BEHIND THE SHORE.

A MARINE RADIO CAME WITH THE HOUSEBOAT THAT WILLIAMS RENTED BUT THEY WERE TOO FAR OUT TO MAKE CONTACT. CELLULAR TELEPHONES ARE ALMOST NON EXISTENT IN THE TERRITORY. SO K0SRW TURNED TO HAM RADIO. WILLIAMS HAD A YAESU 900 AND OUTBACKER ANTENNA ALREADY SET UP. ON 20 METERS, HE HEARD W8VRT, LEN KERSCH, IN ANN ARBOR, MICHIGAN, SEVERAL HUNDRED MILES AWAY.

KERSCH WAS TAKING PART IN A NET, ON 14.178 Mhz. WILLIAMS BROKE IN, EXPLAINED THE SITUATION AND GAVE A PHONE NUMBER FOR THE BULLFROG MARINA, AT LAKE POWELL. KERSH CALLED THE MARINA. THEY CONNECTED HIM WITH THE NATIONAL PARK SERVICE. ANOTHER WILLIAMS…KARL WILLIAMS, KD5AW, IN OKLAHOMA CITY BROKE IN TO ASSIST BY RELAYING INFORMATION BETWEEN W8VRT AND K0SRW.

ABOUT 25 MINUTES AFTER THE INITIAL CONTACT, A MEDICAL HELICOPTER AND A NATIONAL PARK SERVICE BOAT ARRIVED. THEY DECIDED TO AIRLIFT THE GIRL BY HELICOPTER TO A HOSPITAL AT GRAND JUNCTION, COLORADO. STRANGE TO RELATE, THE PILOT ALSO WAS A HAM…TOM CALDWELL, KC7BPK, WAS AT THE CONTROLS.

THERE WAS NO ROOM FOR THE PARENTS IN THE HELICOPTER. THEY TOOK OFF TO TRAVEL SOME 4 HOURS BY BOAT AND CAR. AS THEY DROVE AND GOT BACK INTO CELL PHONE RANGE, GOOD NEWS WAS WAITING FOR THE ANXIOUS PARENTS. X-RAYS SHOWED THEIR DAUGHTER WAS NORMAL…NO PERMANENT INJURIES. THIS HAM RADIO RESCUE STORY HAD A HAPPY ENDING.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

Williams says he is grateful to all of the hams who assisted in the rescue. Because of them an injured youngster quickly received medical aid in a rather remote part of the USA. (K0SRW)

**

RESCUE RADIO: HAMS READY FOR WASHINGTON TRAIN DERAILMENT

Ham radio was ready but not really needed at a July 29th train derailment just outside of Washington D-C. An AMTRAK liner was enroute from Chicago to Washington when many of the passenger cars left the track near Kensington, Maryland. About 90 people were taken to area hospitals, three reported in critical condition. One news report said that a ham radio communications team was on its way to supply assistance but with no real communications failure, their services were found to be unnecessary. The news story did not mention anyone by name or call sign. (ARNewsline™ from news reports)

**

RADIO LAW: QCWA FILES IN FAVOR OF NEW HAM BANDS BUT SOME MEMBERS SAY THEY SHOULD HAVE BEEN ASKED

The Quarter Century Wireless Association has filed in favor of the ARRL proposal to create new ham radio bands. While most members of the QCWA appear to agree with the FCC filing, there is one group that is taking the Board of Directors to task over how it was done.

Its not because they disagree with the content. Rather, calling themselves the “vocal minority,” these hams are using the QCWA electronic remailer to complain that the board did not send paper or electronic copies of the proposed filing to all members. Also, they say that the board did not individually poll the members for their opinions before writing the QCWA position and sending the paperwork to the FCC.

But outgoing QCWA President Gary Harrison, K0BC, says that the reason it was done this way is simple. It was a matter of time.

In a posting to the QCWA Reflector, Harrison says that there was a limited amount of time to file comments. He also notes that there are only about 300 QCWA members are on the groups electronic mail list. That would mean preparing a paper mailing, sending it out and waiting for members to write back.

Harrison uses QCWA election figures as an example. He says that it takes about two years to complete an election cycle and the organization receives only about 30% return of the ballot. The cost of mailing material out for this election is about $2,000.

What about the organization's magazine called the QCWA Journal? Harrison says that it takes two months to prepare and mail it from the deadline for submitting articles. And be it a paper ballot or an announcement in the Journal, the QCWA would have to allow several months to permit input from the membership. In this case waiting would mean that the QCWA could not file because the commentary cutoff date had passed. (ARNewsline™)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Tri Town Amateur Radio Club repeater, W9VT, serving Calumet City Illinois.

(5 sec pause here)

**

CHANGING OF THE GUARD: STEVE MANSFIELD, N1MZA – S.K.

Some rather sad news to report – especially for us here at Newsline. It comes in word from the American Radio Relay League that its Legislative and Public Affairs Manager Steve Mansfield, N1MZA, has died of complications to brain cancer at age 55.

Steve Mansfield came to ARRL service in 1991 as an expert in the area of Public Relations. It did not take long for his bosses at League headquarters to realize his enormous potential as a people person. As a result, the hallowed halls of Washington D.C. soon became his beat and he spent the next eleven years as the point man between the ARRL and numerous political leaders.

ARRL President Emeritus George Wilson, W4OYI, had the opportunity to work with Mansfield. He tells Amateur Radio Newsline that he recalls one incident just before a major convention out in California. There were a lot of very controversial issues on which the League had taken considerable heat. Wilson gave Mansfield the job of searching out all issues and prepare a short "position paper" on each for W4OYI. The former ARRL president says that Mansfield did such an outstanding job that he had copies sent to all Directors and Vice Directors. The result was what

President Wilson called tons of favorable comments, and a real tribute to the dedication of N1MZA.

Mansfield was also seen at many hamfests and conventions. In most cases speaking at public relations sessions hosted either by the ARRL or by us here at Newsline. And that's really where we got to know him as a friend, a college and as an expert in the topic of relating to other people.

Steve Mansfield was first diagnosed with brain cancer in 2000 and had surgery to remove the malignancy. He was doing well until recently when he suffered a series of setbacks. He passed away on Monday July 29th. He is survived by his wife Ellyn daughters Ramona and Elizabeth and the friends he made in and out of ham radio, worldwide. (ARRL, W4OYI, ARNewsline™)

**

CHANGING OF THE GUARD: FATHER MIKE MULLEN, WB2GQW – S.K.

The Reverend Michael Mullen, WB2GQW, a past winner of the ARRL International Humanitarian Award, became a Silent Key in June. "Father Mike" was a professor and past chairman of the humanities department at St. John's University in New York. He was best known in amateur radio for his involvement with IMRA, the International Mission Radio Association. IMRA maintaines lines of communication using amateur radio for missionaries. It also inter-connects various humanitarian agencies over the air after disasters.

According to the New York Daily News, in addition to his ARRL International Humanitarian Award, Father Mike received the St. John's University Presidential Medal and was listed in the
international edition of "Who's Who in Education." He was 87 at the time
of
his death. (CQ, NY Daily News)

**

NAMES IN THE NEWS: A NEW BOOK BY N6NHG

Former computer hacker Kevin Mitnick, N6NHG, has turned author. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Kevin Mitnick, N6NHG, Mitnick is the California ham whose license renewal application has been designated for hearing by the FCC. This, based on his conviction for hacking. And now according to news reports, he has written a soon to be released book on computer hacking and -- more important -- how to prevent being hacked.

According to the reports, Mitnick's book -- The Art of Deception -- is a novel that describes more than a dozen scenarios where hackers dupe computer network administrators into divulging passwords, encryption keys and other security details. Mitnick claims that its all fiction with any personal details having been kept out of the book which reportedly uses

fictitious names of hackers, victims and companies.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

Earlier this year the FCC designated his application to renew his Amateur licenses for a public hearing. The FCC contends that Mitnick may no longer possess the requisite requirements to remain a Commission licensee. (Published reports)

**

CONVENTIONS: HUNTSVILLE HAMFEST

Two conventions on almost opposite sides of the country are taking place the weekend of the 17th and 18th of August. In Huntsville Alabama, the Huntsville Hamfest takes place at the Von Braun Center's South Hall right across the street from the Huntsville Hilton Hotel. Since the first Huntsville Hamfest in 1981, this event has grown to the point where the Amateur Radio manufacturers and dealers consider it to be one of the seven major hamfests in the country, pulling a gate of between 5000 to 6000 every year.

We at Amateur Radio Newsline have presented our own Young Ham of the Year Award at the Huntsville Hamfest since 1993. 2002 is no exception. So please join us at 2:00 P.M. Central time on Saturday August 17th as we, our corporate underwriters Vertex Standard and CQ Magazine along with the people of Huntsville honor 17 year of Josh Abramowicz, KB3GWY as the 2002 Amateur Radio Newsline Young Ham of the Year. More information about the Huntsville Hamfest is in cyberspace at www.hamfest.org. (Huntsville Hamfest)

**

CONVENTIONS: ARRL SW DIVISION IN SAN DIEGO

And August 16th to the 18th will se the ARRL Southwestern Division show at the California Center of the Arts in Escondido. The scheduled Banquet speaker will be Riley Hollingsworth K4ZDH. Also on hand will be ARRL President Jim Haynie W5JBP, Big Project Coordinator Jerry Hill, along with Division Director Art Goddard W6XD, and Vice Director Tuck Miller NZ6T. More information is on the convention web site at http://sd2002.hamcon.net. (HAM-CON)

**

CONVENTIONS: HUNTINGTON HAMFEST

And a week earlier on August 10th, the Tri State Amateur Radio Association will host the Huntington, West Virginia Hamfest. Its at the Veterans Memorial Field House, 2590 Fifth Avenue in Huntington from 8:30 AM to 2:30 P-M. Talk in on the 146.76 repeater and V-E administered ham radio exams will also be available. For further information contact Phil Beckett by e-mail- to ab8me@hotmail.com (N8TMW)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only September is canceled. There will be a TRW Swap Meet the last Saturday of the month in August and in October, November and December.

The TRW Swap Meet is famous and draws attendance from across the nation. For more information visit http://w6trw.com on the world wide web. (Via e-mail from TRW A.R.C.)

**

SCIENCE PAGE: THE MAGNETIC NORTH POLE IS ON THE MOVE

The Magnetic North Pole could soon abandon Canada, migrate north of Alaska and eventually wind up in Russia. So says one scientist. Amateur Radio Newsline's Bill Pasternak, WA6ITF, reports on the future of the pole.

--

The e-newsletter Science Today tells of Larry Newitt. Newitt is a researcher with the Geological Survey of Canada. And Newitt says that the magnetic pole is on the move.

The researcher says that the pole, which has steadily drifted for decades, has picked up speed in recent years. He says that at its current speed, it could exit Canadian territory as soon as 2004. And, says Newitt, if the pole follows its present course, it will pass north of Alaska and arrive in Siberia in a half century.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, Los Angeles.

--

If you are worried that you may soon have to trade in your old compass for a G-P-S to know where you are, don't. Researcher Newitt cautions that such predictions could be wrong. (Science Today)

**

INTERNATIONAL - BRAZIL: A NEW LF BAND ON ITS WAY

According to Brazilian amateur PY3CRX the Brazilian licensing authority, ANATEL, has agreed that the 135.7 to 137.8kHz band can be allocated to radio amateurs in that nation on a secondary basis. No date was mentioned for the new band's introduction but PY3CRX adds that the band is, or will be, also available in Paraguay and Uruguay as well. (GB2RS)

**

INTERNATIONAL- CANADA: VY2BP NEW RAC AD

Radio Amateurs of Canada reports that Bill Perry, VY2BP, has been appointed as an Assistant Director for the R-A-C Atlantic Region. Perry will complete the unexpired term of Fred Burke, VY2FB, who recently resigned the position because of family commitments. (RAC)

**

INTERNATIONAL EAST TIMOR: NEW CALL SIGN BLOCK ANNOUNCED

The International Telecommunications Union says that the 4WA to 4WZ prefix block will go to the United Nations Territory Administration of East Timor for as long as it exists. United Nations stations within East Timor will be assigned 4U prefixes. The official U N Club station will get 4U1ET. All other amateurs will use the 4W6 prefix. Those residing in East Timor less than one year will sign 4W6 followed by their home call. People staying beyond one year will be assigned a permanent 4W6 call. And yes, CEPT licenses are accepted. (GB2RS, Q-News)

**

DX

In D-X, the UK-lead youngsters' DXpedition to the Maldives should be on the air as 8Q7ZZ until the 11th of August. The expedition is being lead by 18-year old Mark Haynes, M0DXR. Other operators include 15-year old Robert Morgan, M0TTT, as well as young amateurs from Germany and Spain. 8Q7ZZ will be running up to three stations simultaneously, all with beam antennas and up to 400 watts power out. (RSGB)

Meantime, four French operators are in Benin and active as TY7Z, TY9F, TY4DX and TY6FB until the 14th of August. If you make contact with either operation Q-S-L as directed on the air. (QRZ DX)

**

THAT FINAL ITEM: A SPECIAL HAM RADIO PRESENTATION

And finally this week:
--
“Good afternoon to everybody here. We have a lot of Amateur Radio operators and we have a lot of guests aboard the Queen Mary. And we are here for a very short ceremony to commemorate the 23rd anniversary of W6RO.”

--

That was Bob Heil, K9EID, on Saturday, July 27th, talking to a crowd assembled in the Wireless Museum next door to the Queen Mary's radio room. A radio room that for the past 23 years has been the home of Amateur Radio Station W6RO. And to commemorate this milestone, Bob's company, Heil Sound, donated a half dozen custom made Classic series microphones adorned with the W6RO call sign to the station. These retro look microphones are very similar to the RCA studio mic's of the 1930's. Famed rock musician Joe Walsh, WB6ACU, had the honor of making the actual presentation:

--

Joe Walsh: "These Classic microphones are presented to the Queen Mary amateur Radio Station, W6RO, celebrating the 23rd year of continuous operation provided by the Associated Radio Amateurs of Long Beach California, present by Bob Heil, K9EID, and Joe Walsh, WB6ACU, on July 27, 2002. And we wish you continued success with the station and here you go."

Nate Brigtman: "Thank you very much."

--

Accepting the mics was Nate Brightman, K6OSC, who was the man who conceived the idea of a ham station on the Queen Mary. He was accompanied b the current president of the club, Ray Rittenhouse, KF6WZN. Rittenhouse has a surprise for K9EID:

--
Ray Rittenhouse: "We appreciate this very much Bob, and from our club to you is a certificate of our appreciation thanking you for those microphones we are now putting in W6RO"
--

Then it was Nate Brightman's turn. He told the crowd a bit about the operation of W-6-R-O, and what those who sit at the transmitters get as a token of appreciation for taking the time to operate:

--
Brightman here: ""Those amateurs who come by to visit W6RO aboard the Queen Mary, should they operate the station, we will mail to them a special certificate designating that they had the honor of operating W6RO aboard the Queen Mary."
--

And when it was all over Bob Heil ended the presentation with a bit of a poem:

--
Heil: Nate. Thanks for having us today. And Ray, we appreciate all of your efforts for the club. And we will be seeing you a little high, a little low. But we'll find you somewhere from W6RO. (Applause)
--

Attending the ceremony, were numerous local ham radio operators from the Los Angeles area. This included Vertex-Standard's Chip Margelli, K7JA and film maker Dave Bell W6AQ. The ARRL was represented by Los Angeles Section Manager Phineas Icenbice, W6BF. You can hear the complete presentation as

this weeks Newsline Extra. You will find it as an MP3 file on our F-T-P page only a click away at www.arnewsline.org. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Several years ago there were three books published by a man named
William Poundstone: "Big Secrets"; "Bigger Secrets"; "Biggest Secrets".
One of them gave a quick & simple explanation of how David Copperfield
made the Statue of Liberty vanish. (HINT: it involved the "Lazy Susan"
principle!). All sorts of other stuff appeared in the books- recipies
for KFC & other fast foods, where special stores are located, Marlon
Brando's callsign in French Polynesia...

1) Try to locate a "GE SuperRadio III"; it has superior AM performance
2) Other used non-ham rigs that might work (Ive had good luck with them here in NH) are the Yaesu FRG-7 or Icom R71A.
3) An outdoor longwire antenna is gonna be a B-I-G help. If you have the room, you can try to lay out a Beverage antenna (this is simply a low longwire, 1,000'+ long, in a straight line, pointing towards the station wanted. It terminates with a resistor into the ground.

If you don't understand the mechanism responsible for the cited changes in molecular and atomic concentrations, why did you so definitively pronounce the seasonal F2-layer spreading explanation as "wrong" when such spreading could be responsible for the concentration changes?

2567. QSL ROUTE: 3da0tm

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-04 01:49:32 UTC
From: NOSPAMdt0124@comcast.net
Message-ID: <3d4c87eb.84547022@news.mo.comcast.giganews.com>
Source record: 12543

Anyone have QSL route info for 3DA0TM ?

Can't find it by more conventional methods nor is his operation
reported in any of the DX newletters I get.

Suggestions?

Tnx & 73

I haven't seen anything official recently, but I'm still waiting for a card.
So for those who only included adequate return postage with our requests, I
suppose that we still have a few more weeks to wait.

From: Mike Luther <mike.luther@ziplog.com>
Message-ID: <3D4D4C7E.8DE1BB2@ziplog.com>
Source record: 12548

Back in 1987/1988 there was an active station FT5ZB for a couple months
who was asking for QSL's via F6EYS..

Does anyone know a route that just might be used for either call now and
where those logs might be?

Thanks!

2573. Re: Address lead for FT5ZB or Manager F6EYS?

Mike --

If you get any info, please pass it along. I was not able to
get a QSL from FT5ZB during the same period.

I have four contacts on 40 CW in those two months and twice noted that F6 manager in the logbook. It would be wonderful to find out where all this might be if it can be done.

2575. Re: Summer lull--Why?

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-04 20:23:59 UTC
From: scs@ieee.NOSPAM.org

Source record: 12451

The original statement, "The maximum usable frequency drops during the summer because thelonger periods of solar illumination (relative to winter) expand and spread the F2 layer, lowering its effective ionization" is wrong because it says nothing about the composition of the ionosphere.

Greetings,

Nice to back after a lapse of a few months. I guess I might be
pushing the limitis a bit of what's on-topic but I'd like some feed-back
on what most Hams expect if HR 4270 passes unscathed. Will we really
see poor Hams in townhouses erecting slopers in their backyards,etc.
no matter what the Homeowners Assoc. says ?? I'd be curious also if
anyone knows what ARRL expects out of this.

I'd like to think that things are gonna ease up a bit on Hams what with
the post 9-11 mentality that now begins to admit a little bit that, Hey maybe we

could use back-up comms. etc. Thoughts?

Did You Know...?
http://www.deps.org/

That according to the Army FM 42-414;
TACTICS TECHNIQUES AND
PROCEDURES FOR QUARTERMASTER
FIELD SERVICE COMPANY DIRECT

SUPPORT defines

Directed energy mission-kill is the use of electromagnetic energy, such as visible light, infrared, millimeter waves, microwaves, or x-rays, to disable susceptible military targets by damaging or destroying a critical component of the military target.

Antimateriel Effects
Mission-kill effects to materiel include inducement of mechanical damage, overheating of components, inducement of electrical currents, or inducement of other effects to cause a variety of types of damage or system malfunction.

Antipersonnel Effects

Directed energy mission-kill antipersonnel effects cover a very wide range.

Sources of Directed Energy Mission-Kill Effects

Directed energy mission-kill effects can occur in training or combat. Effects in training or combat can occur when susceptible personnel or equipment are accidentally exposed by getting too close to nonweapons-directed energy sources such as radio transmitters, radars, electronic warfare jamming devices, television transmitters, television or communications microwave relays, laser range finders, laser designators, laser jammers, and similar devices. Some of these mission-kill effects are also sometimes technically categorized as electromagnetic interference or electromagnetic effects. Directed energy warfare is the use of and defense against directed energy weapons and devices in combat. Mission kill is one of a very large continuum of DEW effects on targets. The large variety of DEW target effects are used to provide a very wide range of combat functions including the following: detection of targets, illumination of targets to supplement night-viewing systems, identification and classification of targets, disruption of target function or mission, damage of targets, and destruction of targets. Examples of directed energy mission-kill devices include hand-held, crew-served, or vehicular-mounted laser devices and vehicular-mounted or artillery-delivered radio frequency devices. http://www.deps.org/

AFGHANISTAN/GERMANY. DETAILS OF
NEW GERMAN-RUN VOICE OF FREEDOM
RADIO IN KABUL | Text of report in English
by Radio Netherlands "Media Network" web
site on 6 August

A Germany-funded radio station, Voice of Freedom, started broadcasts
to Kabul in Dari and Pashto on 4 August 2002. Programming on the FM
station includes news, music, features and language courses. The
station is based in the German military camp to the east of Kabul.
German experts have trained two Afghan newsreaders and several
technicians to work for the station.

Richard Hunsicker, spokesman for the German forces, says that the
running costs of 2,000 US dollars a month come from the German
military budget. The station was officially opened by Afghan Minister
of Information and Culture, Sayed M. Rahin. Source: Radio Netherlands

http://www.newscientist.com/news/
"Vast filaments of hot gas tracing the
web of dark matter that underpins the
large-scale structure of the Universe
have been seen for the first time!

"Astronomers using NASA's X-ray
satellite observatory, Chandra, viewed
the filaments stretching for millions
of light years through space, with one
passing through our own galaxy. They
calculate the filaments contain five
times more mass than all the stars in
the Universe.
[...]
" 'The discovery confirms the existence
of an extremely large fraction of the
mass of the Universe,' says Robert Warwick
at the University of Leicester. This is
'extremely important', because 90 per cent
of the matter believed to exist in the
Universe has never been seen - the so-called
'dark matter'." (((Continued)))

"... One must speculate as to the effects of these
combined events on Phil's [Philip K. Dick] mind on
that fateful February day in 1974. Phil's interest
in early Christianity, and his friendship with
James A. Pike, the Episcopal Bishop of California,
dating back to the mid-sixties, has been
well-documented in several of his novels.
Could this combination of circumstances culminate
in the results that were to follow?"
http://www.alphane.com/moon/PalmTree/2-3-74.htm
[...]
PKD the Dreamer. People claim that it is through
dreams, intuitive flashes, and visions that they
experience spontaneous past-life recall, and
researchers look for the sudden acquisition of
knowledge or information by the individual that
cannot be explained by other means. Australian
aborigines receive their knowledge about spiritual
matters, as well as practical information
about how to survive in an extremely hostile
environment, through dreaming. They call it
the "dreamtime".

When looking at the series of events that happened
to Phil we must ask ourselves how they relate to
each other. Which ones were primary events, and
which ones were secondary events or even tertiary
events resulting from the previous ones.
As Lawrence Sutin, author of Divine Invasions:
A Life of Philip K. Dick states, "Phil was a living
psychic caldron" at this point. I feel that the
many dreams experienced by Phil during this time
period must be thought of in these terms.

In the following weeks Phil was to have a series
of nightmares, which frightened him further; they
contained huge flying reptiles. In one of these
dreams he describes that he was a young child in

a prehistoric tribe and as these dragons came near
he transformed into his pet saber-tooth tiger and
began to posture in defiance, but he found himself
in a cage without means of escape. Upon being
aroused from her sleep by "... the sound of a
large reptile hissing," his wife, Tessa, found "
... Phil lying there, still asleep, hissing.
Afraid to touch him, I called out his name. I was
getting more scared with every second that passed.
I sensed that it was not Phil who was hissing,
but some mindless beast that had taken over
his body."

Dragons have been used as symbols of the life
force in many cultures for thousands of years,
the essence of nature, an underlying invisible
force. The flying dragon is an inner symbol of
dark unconscious forces which must be
transformed into creative forces. In alchemy,
the mystical art of transforming consciousness,
the dragon was a symbol of Mercury manifested
as passion and concupiscence, which must undergo
extraction and transformation, before becoming a
peacemaker, a mediator between warring
elements, and a producer of unity.

There are twenty four pathways which connect the Nine Worlds.
There are twenty four Runes in the Elder Futhark.
The "Eagle" is at the highest branches of Yggdrasil.
"Nidhog" is the dragon at the root of Yggdrasil, and
"Ratatosk" is the Squirrel who communicates
between "Nidhog" and the "Eagle".
The notion of "Nine Worlds" is archetypal

"...These comprise the nine most important prophecies
of the Hopis, connected with the creation of the nine
worlds: the three previous worlds on which we lived,
the present Fourth World, the three future worlds we
have yet to experience, and the world of Taiowa, the
Creator, and his nephew, Sotuknang."
[From The Book of the Hopi by Frank Waters]
http://www.dreamscape.com/morgana/pan.htm

"Near the day of the Great Purification,
there will be cobwebs spun
back and forth in the sky."

"The Purification will begin shortly
after humans build a great house in
the sky. By then there will be fires
everywhere and greedy, selfish,
power-mad leaders, internal wars."

-- pre-Colombian Hopi prophecies

"It ain't over 'til it's over." Yogi Berra

****
BTW, the one book that has surfaced at the
Ibogaine working group recently is TRANSMIGRATION--
discussion of the anoke mushroom. That brought up
the subject of Bishop Pike, who was Phil's friend
and perished in the Dead Sea desert looking for the
anoke mushroom (flesh of God)-- thought to be the
lost Gnostic sacrament and present in in the
tincture in the wine served at the last supper.
This tincture is also thought to have contained
Syrian Rue, and possibly iboga alkaloids.

One of the properties of flesh of God, presumably,
was that it would confer invulnerability to Death.

He could be crucified, but not killed while under
the influence.

Arch-Bishop James Pike marched with
Martin Luther King at Selma.

"... "In pre-Islamic days, called the Days of Ignorance,
the religious background of the Arabs was pagan, and
basically animistic. ..."
http://www.innerx.net/personal/tsmith/Islam.html

"According to some (apparently different) sources such as

http://www.swordoftruth.com/swordoftruth/archives/byauthor/aditichaturvedi/vpopia2.html

"... Muhammad's uncle was one of the resident priests of the
Shiv temple known as 'Kaaba'. ... this glorious Hindu temple
was made to symbolically represent a microcosm of the
universe. ... Right at the centre of the Kaaba
was the octogonal pedestal of Bramha the creator. ...
Muhammad destroyed all 360 idols,
but even he could not summon the courage to
completely obliterate the Shivling in the Kaaba. ...

"... Today it lies broken at seven places and held together
by a silver band studded with silver nails,
bearing the name 'Sangey Aswad'
which came from the Sanskrit Ashwet meaning non-white
or black stone.

"... oral recitation of Vedic scriptures was always done in
a lyrical fashion, utilizing music ... Muhammad decided to
forbid Music. ...".
****
"The status of women was that of pride and equal respect.
How could it be otherwise with a people whose chief deity
was the goddess Durga (Alla). Women married men of their
choice and were financially independent. They were
entrepeneurs, artisans, poets and even warriors! Later on
Muhammad would marry Khadija, who was not only a wealthy
merchant but also in the position to choose her own
husband. This clearly demonstrates the level of freedom
women enjoyed in Vedic Arabia. Hind, who was the wife of
Muhammad's chief enemy Abu Sufyan, herself participated
in the battlefield."
[...]
"Gone were the schools, teachers, libraries,
poets, artists, philosophers and scholars that
had littered the Vedic landscape of Arabia like
stars. Everyone had to become a raider if not
from choice then for the sake of surviving the
absolute intolerance of dissenters, that Islam
preached. Thus was the light of learning

extinguished in Arabia. All that remained was
the Koran, the Kalma and the murderous hatred
of anything Non-Muslim."
http://www.swordoftruth.com/swordoftruth/archives/byauthor/aditichaturvedi/vpopia2.html
****
"Kali: the bloodthirsty wife of Shiva, with
blue-black body, four arms, using a human skull
as a cup. Her color symbolizes eternal night of
non-existence, free of illusion and distinction.
She wears a garland of the heads of impure
thoughts, which She has severed from the
personalities of Her devotees."
****
"The Shivling is the sacred meteorite. [...]
From the Hindu point of view, it is Shiva's lingham,
or phallic symbol. [...]

****

http://www.sciencenet.org.uk/slup/CuttingEdge/Jul02/spookymind.html
"... Believers were much more likely than sceptics
to see a word or face when there was not one,
Brugger revealed last week at a meeting of the
Federation of European Neuroscience Societies
in Paris. However, sceptics were more likely to
miss real faces and words when they appeared
on the screen.

"The researchers then gave the volunteers a drug
called L-dopa, which is usually used to relieve the
symptoms of Parkinson's disease by increasing
levels of dopamine in the brain.

"Both groups made more mistakes under the
influence of the drug, but the sceptics became
more likely to interpret scrambled words or faces
as the real thing.

That suggests that paranormal thoughts are
associated with high levels of dopamine in
the brain, and the L-dopa makes sceptics less
sceptical. 'Dopamine seems to help people
see patterns,' says Brugger.

"Plateau effect

"However, the single dose of the drug did not
seem to increase the tendency of believers to
see coincidences or relationships between the
words and images. That could mean that there
is a plateau effect for them, with more dopamine
having relatively little effect above a certain
threshold, says Peter Krummenacher, one of
Brugger's colleagues.

"Dopamine is an important chemical involved
in the brain's reward and motivation system,
and in addiction. Its role in the reward system
may be to help us decide whether information
is relevant or irrelevant, says Francoise Schenk
from the University of Lausanne in Switzerland."

Not everyone can install monster low band DX antenna systems and run 1Kw +,
so the DX net or round table can be useful to those forced to get by with a
poor antenna or relatively low power.

I've been more than happy to join Gianni on 40m and work some hard to find
entities on the odd occasion. I'm also happy to have worked most of them
outside the net / round table as well.

As much as I'd like to install phased verticals or large loops of one design
or another for the low bands, it just isn't going to happen in my very urban
environment with small garden / back yard. Maybe I'll try a magnetic loop at
some point...

I would agree that there are some very poor standards of operating within
the nets sometimes, as well as a distinct inability to listen properly

before transmitting.

What's your point? I am running 100 Watts into a tiny 9-band vertical in a noisy downtown appartment area.

Having worked 297 DXCCs in 4 years with that setup (CW only), I wouldn't even bother to tune onto a net frequency. The new ones I need don't hang out in nets.

Mike,

After years and many cards sent to various leads, I finally got a card
for a QSO with FT5ZB in Feb 1988 via F3CJ (ex F6ESH). I got the card in
1998, so good luck and be patient!

The XY3 station from Myanmar was on the 14.245 Family Hour DX Net last week,
but you probably don't need Myanmar.

I'm intrigued by this "rec.radio.amateur.dx" net here....

Amateur Radio Newsline™ Report 1304 August 9th, 2002

Amateur Radio Newsline report number 1304 with a release date of Friday, August 9th 2002 to follow in 5-4-3-2-1.

The following is a QST. U.K. hams take to 5 MHz in a big experiment. Find out the details on Amateur Radio Newsline report number 1304 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: BIG UK 5MHZ EXPERIMENT

If you tune around 5 MHz and hear what sounds like ham radio QSO’s, your ears are not playing tricks. A major study of 5 MHz propagation has begun in Great Britain and some hams are already on the air. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--

The 5 Mhz experiment has begun. The Radio Society of Great Britain has announced that permission has been granted by the Ministry of Defence and the Radiocommunications Agency for the allocation of five spot frequencies in the range of 5250 to 5450kHz. The frequencies will be made avbailable in the form of a 3 kilohertz bandwidth channel by way of a Notice of Variation to the UK Amateur License. Because it is a controlled experiment applicants are required to report their findings and results to the RSGB.

The purpose of the experiment is to carry out propagation and antenna investigations aimed at improving the understanding of Near Zenithal Radiation or NVIS - Near Vertical-Incidence Skywave - communications via the ionosphere. The frequencies assigned are 5260, 5280, 5290, 5400 and 5405kHz. It’s expected that this experiment will run for about 4 years.

Jeramy Boot, G4NJH.

--

Here in the United States, Charles Harpole, K4VUD, one of the permitted operators of the American WA2XSY 5 MHz-band test stations invites U-K hams to contact him to set up a sked. The 5 point 260 MHz channel would be the best frequency for him. He is available for all times and days until the 20th of August and his e-mail is k4vud@hotmail.com (GB2RS)

**

ENFORCEMENT: FIVE LICENSES CANCELED BY FCC

Five hams who participated in a September 2001 testing session in Yucaipa California and who declined to be retested have lost their ham radio licenses. The FCC's Riley Hollingsworth says that in this case it was the VEC who brought the matter to his agency:

--
Hollingsworth: "Now the W5YI-VEC really did its homework on this one. They picked up some comments and complaints on an Internet News Group about the examination session; did a little homework and further research and found some very good reasons to refer the matter to us."
--

On April 30, the FCC wrote all five requiring them to re-take their Amateur Examinations before June 30th. All five failed to appear. Again the FCC's Riley Hollingsworth:

--
Hollingsworth: "Those licensees were Eddie Bartolome - Extra Class N6YAG of Los Angeles; Camito Lopez KG6GJC a Technician of Los Angeles; Marcial Rivas - General Class KG6HCP of Salem Oregon; Manuel M. Vega, KG6GSP - General class of Anaheim California and Marcelino Llanes, KG6HBR of Oxnard California."
--

Hollingsworth adds that the FCC is continuing its investigation of other examinations given by the Volunteer Examination team involved in the September 1st 2001 session in Yucaipa. Also that his office really appreciates the vigilance of the W5YI-VEC. (FCC, RAIN)

**

ENFORCEMENT: FCC MAY RETURN FORMER KV4FZ TO THE AIRWAVES

An ex-ham from the US Virgin Islands who was forced off the air a year and a half ago by the FCC may soon be back on, courtesy of the FCC. This as the agency indicates that it may act to reinstate the amateur license of Herbert L. Schoenbohm, the former KV4FZ. Amateur Radio Newsline's David Black, KB4KCH, has been following this story and has the latest:

--
Herbert L. Schoenbohm's name shows up a lot in FCC records. He's the former ham who used to hold the callsign KV4FZ. That was before he lost his license.

In December, 1992, Schoenbohm was convicted of fraudulently using a counterfeit access device to obtain long distance telephone service. He was sentenced to two months of house arrest, two years probation and fined $5000. That left the FCC feeling that a felony conviction disqualified Schoenbohm from continuing as a Commission Licensee.

Two years later, Schoenbohm filed with the Commission to renew his amateur radio license. The Commission answered -- but not with what he wanted to hear; instead, the FCC designated his application for a hearing. Two encounters took place--one in 1995, the other in '97. At that point, the Commission told Schoenbohm he should no longer be allowed to have an FCC license.

He was allowed to operate until he exhausted all avenues of appeal. That happened in October of 2000. In January, 2001, Schoenbohm ceased on-air operations.

Before leaving the airwaves, 'though, Schoenbohm vowed that he would one day return to the airwaves as a licensed radio amateur. That day may be soon--based on findings presented at an FCC Administrative Law hearing earlier this year.

The hearing was held to determine if Schoenbohm now meets the requirements to once again become a Commission license holder in the Amateur Radio Service. The finding is complex and covers nearly two dozen pages. But it appears that the government may be ready to give Schoenbohm a second chance as a licensed ham.

The Commission says in part there is sufficient evidence in the record to support a finding that Schoenbohm has rehabilitated himself. The Commission notes that -- based on the evidence --it appears unlikely he would engage in any future misconduct. The Commission's Enforcement Bureau Investigations and Hearings Division endorses Schoenbohm's return to the amateur radio airwaves.

Schoenbohm took and passed a new exam in March, 2001. But the Commission again threw in a delay, designating his application for a hearing on the basis of character issues. This is the application that an Administrative Law Judge has been reviewing. Now that the recommendations are in, the Administrative law judge could issue a final opinion and recommendation within the next few months. That means Herbert Schoenbohm could possible be on the air again sometime this year.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.
--

In the end, it is going to be up to the Commission to make a final resolution as to whether or not the former KV4FZ returns to ham radio. Nobody can predict what that decision will be. And if he is permitted to return, will it be with his old KV4FZ call sign? (ARNewsline™ from FCC Publiic Files)

RESCUE RADIO: COMMUNICATIONS TECHNOLOGY HELPS SAVE KIDNAPPED GIRLS

Two kidnapped California teenagers are alive thanks in part to a newly developed law enforcement communications technology. Mert Garlick, N6AWE, has the details:

--
It happened on Thursday August 1st when two teenage girls from the Quartz Hill

area of Southern California were abducted at gunpoint. Using the newly established AMBER child abduction alert system, the names of the teens and a description of the car they were in was immediately distributed to law enforcement agencies and broadcast outlets statewide. Shortly thereafter the California Transportation Authority was displaying information on it’s 316 electronic signs on freeways.

Sheriff's deputies in Kern County soon received several calls from people who saw the white Ford S-U-V. A sheriff's helicopter crew used the information to direct a ground unit that made the felony arrest stop. When he resisted and brandished a weapon, deputies shot and killed Roy Dean Ratliff and freed the girls.

The rescue took place only six days after Governor Gray Davis directed the installation of the AMBER system. AMBER uses a combination of two-way radio, fax, e-mail and other communications technology to quickly spread word when a child is abducted. It is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996.

In this latest case it took less than 4 hours to get the AMBER alert on the two missing girls circulated to the road signs. California’s Governor Davis says that his states AMBER system will now be refined to make it react more swiftly.

For the Amateur Radio Newsline, Mert Garlick, N6AWE.
--

Today, there are forty-one AMBER Alert programs across the country. The system is credited with safely recovering at least seventeen children since 1997. (Published news reports)

**

ENFORCEMENT: PLEASE FIX THE INTERFERENCE

A pair of utility companies have received letters from the FCC regarding unresolved interference complaints from area amateurs. According to the W5YI Report Lakeland Electric Company in Florida and Commonwealth Edison in Illinois both were sent notes reminding them of their responsibilities to prevent interference to radio stations including radio amateurs. The letters gave the electric companies 90 days to either resolve the problems or contact the FCC with a specific timetable for making the fix. (FCC from W5YI Report)

**

HAM RADIO POLITICS: NEW DIRECTORS FOR THE NFCC

Turning to the ham radio political arena, word that Ken Chilton, KA1TIH; Alex Harvilchuck, N3NMN and Vincent Bardsley, KB3OM have been elected to the Board of Directors of the National Frequency Coordination Council. They replace outgoing Directors Dick Isely, W9GIG, Owen Wormser, K6LEW, and Dave Baughn, KX4I, who helped form the NFCC at a meeting in St. Charles Missouri back in 1995.

Chilton, Havilchuck and Bardsley also join Nels Harvey, WA9JOB and Clay Freinwald, K7CR as the duly constituted National Frequency Coordinators' Board. This for the twelve month period starting on September 1st. (ARNewsline™)

**

HAM RADIO POLITICS: NEW SACRAMENTO SM IS OLD SACRAMENTO SM

California’s former Sacramento Valley ARRL Section Manager has become the new Sacramento Valley Section Manager following the resignation of the current Sacramento Valley Section Manager. Confused? Well, here’s what happened.

According to an ARRL Bulletin, Jettie Hill, W6RFF, of Roseville, California, has been appointed to succeed Jerry Boyd, K6BZ, as the Sacramento Valley Section Manager. This is because Boyd is moving out of the section.

Boyd was appointed in 2000 to replace Hill. Hill continued to serve the section as the regions Affiliated Club Coordinator and as an Official Relay Station. W6RFF previously served as Santa Clara Valley Section Communications Manager from 1978 until 1982 and as ARRL Pacific Division Vice Director in 1982 and 1983. The appointment of Hill, who had previously served for more than 10 years as Sacramento Valley S-M became effective on August 1st. Got that? (ARRL)

**

FUTURE TECHNOLOGY: HIGH TECH WORKERS NEEDED

Still in California, word that lack of qualified workers is costing Silicon Valley billions of dollars annually. The management consulting firm A.T. Kearney says that this is threatening the regions position as a global high technology center. The region's shortage of high-tech workers means that one in three jobs requires special recruitment efforts, or goes unfilled, leading to a loss of over $3 billion a year. (ProPeople.com)

**

RADIO REGULATIONS: PERMANENT CELL NUMBERS ON HOLD

Mobile phone users who want to keep their numbers after switching wireless companies will have to wait until late next year for that option. This after the Federal Communications Commission gives cellular phone companies until November of 2003 to offer customers the choice.

The new date, one year later than the previous deadline to implement the service. It is the third extension granted by the FCC. Most wireless companies oppose the idea, arguing it would cost billions of dollars and drain resources needed to improve and lower the cost of wireless services. (FCC)

**

WITH THE HANDI-HAMS: EXTRA CLASS MANUAL IN AUDIO

The Handi-Hams have announced that the latest ARRL Extra Class License Manual is now available to it’s blind members in adapted audio format. At the present time Handi Hams only digital media available but the audio is being

re-mastered onto tape. When the cassette version is available Handi Hams will let us know so that we can let you know. Meantime keep an eye at Book and Tape Catalog area at www.handiham.org for updates. (Handi Hams)

THE SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

Its time for a report from the Amateur Radio Newsline Support Fund. Here's our Administrator -- Andy Jarema, N6TCQ:

--
There are two items to cover this week. I'll start with our poll regarding credit cards. Three weeks ago we asked those interested in supporting Amateur radio Newsline using a credit card to write the single word YES in the subject line of an e-mail and send it to us. We have tallied the results and there were only 17 who said yes. And of the 17, all but one said that only a Pay Pal account was acceptable to them.

Well, statistically speaking, you don't have to know how to do linear regression to know that 17 people out of the 10's of thousands who listen in each week is not a very good response. What it says is that 17 people have Pay Pal access and would use it to help support Amateur Radio Newsline. Even so, we looked into creating a Pay Pal service for those who wanted to use it. Without wasting a lot of time, suffice it to say that the costs involved versus the return would not warrant the expenditure. So at present the credit card issue is dead. For now at least, the Support Fund will remain as it always has. Just the P.O. Box where donations can be sent. Get a pencil and paper ready. I'll give it in a few moments.

The other item I want to touch on briefly is the current state of the checking account. Thanks to your generosity, we made it through June and July. What that means is the bills from May were paid in early June and those from June went out on schedule in July. Now it's early August. The July bills have come due, unfortunately at the same time that our folks are off to Huntsville, Alabama to present the 2002 Young Ham of the Year Award. So that you get a better understanding of the costs involved, I've done a rough breakdown.

First of all, our corporate underwriters Vertex Standard and C-Q Magazine cover almost all the costs of the young person selected for the award. They pay their airfare. They pay their lodging. Vertex-Standard provides an additional gift of Yaesu brand ham radio gear. C-Q treats the winner to a week at Spacecamp. When you add that up, it's probably a gift package with a retail price tag of close to $5000.

Obviously, they do their part and we have to do ours. It costs about $300 a year for a round trip ticket to get one of our people from Los Angeles to Huntsville. Actually, we have our people fly to Birmingham and drive up to Huntsville because this saves quite a bit of money. Yes, it takes them out of their way and adds a few hours of travel time. But the savings in airfare make this added time worthwhile.

The wonderful folks at the Huntsville Hamfest provide us with a free room. We do have to pay our people's expenses like food, hotel, telephone service and a rental car when necessary. We also pay for the plaque presented to the winner and for the mini-banquet we hold for him or her on the Friday night prior to the actual Saturday presentation. The total this year will be somewhere between $1000 to $1100. So we need to raise that in addition to our normal $800 to $1000 it costs monthly to keep the Amateur Radio Newsline newscasts coming your way. And that's where you come in.

Amateur Radio Newsline is a federal 501 (C) (3) not for profit corporation. Donations to it are tax deductible. The address – you've heard it before - is Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

OK. 'Nuf said. But I'll be back next week with the latest thank-you list. For now, from Arcadia, in sunny Southern California's San Gabriel Valley, I'm Andy Jarema, N6TCQ.
--

If you missed the address given by Andy it will repeated at the end of this weeks newscast. (Newsline Support Fund)

**

HAM RADIO IN SPACE: KD5MDT REPLACES KC5FVF ON ISS EXPEDITION 6 CREW

Astronaut Don Pettit, KD5MDT, has been named to replace Don Thomas, KC5FVF, as a member of the Expedition 6 International Space Station crew. According to the ARRL Letter, Pettit had been training as backup flight engineer for the increment six team and was ready to step in.

NASA said the reassignment resulted from a medical issue that affects Thomas' long-duration space flight qualifications. According to Astronaut Office Chief Charlie Precourt, KB5YSQ, the demanding nature of long-term space flight requires a conservative approach to crew health issues, especially this early in the program. Pettit will join Expedition 6 Commander Kenneth Bowersox, KD5JBP, and Russian cosmonaut Nikolai Budarin, RV3DB. (ARRL Letter)

**

HAM RADIO IN SPACE: THE METEORS ARE COMING

Weak Signal operators -- listen up. The Perseid meteors are on their way.

Lee Wical, KH6BZF, says over the QCWA remailer that from midnight to dawn, on Monday August 12th and Tuesday August 13th about 60 to 70 meteors per hour will enter Earth's atmosphere. This particular meteor shower is created by the Earth passing through the debris field left from the Swift-Tuttle comet. The grain-like particles enter Earth's atmosphere, burn up and create what most

people call shooting stars.

The Perseid Meteor shower is not expected to be as spectacular as the Leonid Meteor shower that occurs each November. But, if viewing is good, people will not be disappointed. And if the ionized tails are good, ham radio meteor scatter D-Xers and WSJT users will be happy as well. (KH6BZF)

**

INTERNATIONAL - UK: LONG WAVE GOODBYE

As predicted by Media Network, the loss-making sports station TEAMtalk 252, which broadcast to the UK on 252 kHz Long Wave from a transmitter in Ireland, has closed down. This, after less than 6 months on the air. The station ceased broadcasting at 1300 UTC on July 31st. (Media Network)

**

INTERNATIONAL-CANADA: NEW RAC QUEBEC SM

Claude Paquet, VE2OCP has been elected as Radio Amateurs of Canada Section Manager for Quebec. This, for a two year term that will begin on November 1st. Paquet ran unopposed, eliminating the need for a balloted election. He has also agreed to complete the term of Richard Desaulniers, VE2DX who resigned for personal and professional reasons on August 1st. (RAC)

**

DX

In D-X, G0TQJ he has now gone QRT from Afghanistan where he operate slash YA. During his say in Kabul Chris made 1950 QSOs on SSB and another 850 on RTTY. He is getting his QSL cards printed. He has also sent his documentation to the ARRL DXCC desk for approval. (GB2RS)

And the FISTS newsletter reports on the apparent pirating of callsign ZD7CW. The pirate is using CW and not very active. In fact, he was last heard in November of 2001. But the real ZD7CW has been inactive for several years. (Q-News)

**

THAT FINAL ITEM: A TRUE CAPTIVE AUDIENCE!

And finally this week the story of an interesting call sign operating from a rather unusual place in Ireland. Here’s Q-News Graham Kemp, VK4BB;

--
From our files, the story of a captive audience. A permanent amateur Radio Station with the call sign EI0CRM -- you heard right -- C-R-M -- “crim” -- EI0CRM is being set up in of all places the radio museum of the Cork City jail.

Cork City jail opened for business in 1824 and was used as a prison until 1923. When Radio Erin was expanding in the mid 1920’s, it was located in this jail. Its call sign was 6CK.

The broadcasting studio is now fully restored and a fine display of radio artifacts are on permanent display. Have a listen out for EI0CRM
--

Talk about a QSL card that you may want to keep under lock and key. (Q-News)

**

Tangentially speaking...
In an accelerated-expansion, inflationary universe, the x,y,z coordinates
http://news.nationalgeographic.com/news/2002/04/0425_020425_universe.html
continually change from one measured "moment" to the next measured
"moment". Would the two separate moments cohere enough for an individual
to "travel" forward in time while remaining spacially intact? Empirical
evidence suggests the answer is "yes." Would the two separate moments
cohere enough for an individual to "travel" backward in time while

remaining "neurologically" intact? Answer: _____

"Speed is the criterion of the genuine automatic.
In the ecstatic condition of revelation from the
sub-memory strata, the mind elevates the sexual or
inherited powers and depresses the intellectual
qualities. So a new atavistic responsibility is
attained by daring to believe - to possess one's
own beliefs - without attempting to rationalize
spurious ideas from prejudiced and tainted
intellectual sources! Art becomes, by this
illuminism or ecstatic power, a functional activity
expressing in a symbolic language the desire
towards joy." -- Austin Osman Spare

&&&&&&&&&&&&&&&&&&&&&&&&&&&&

Did You Know...?
http://www.deps.org/

That according to the Army FM 42-414;
TACTICS TECHNIQUES AND
PROCEDURES FOR QUARTERMASTER
FIELD SERVICE COMPANY DIRECT
SUPPORT defines

Directed energy mission-kill is the use of electromagnetic energy,
such as visible light, infrared, millimeter waves, microwaves,
or x-rays, to disable susceptible military targets by damaging or
destroying a critical component of the military target.

Antimateriel Effects
Mission-kill effects to materiel include inducement of mechanical
damage, overheating of components, inducement of electrical

currents, or inducement of other effects to cause a variety of types of damage or system malfunction.

Antipersonnel Effects

Directed energy mission-kill antipersonnel effects cover a very wide range.

Sources of Directed Energy Mission-Kill Effects

Directed energy mission-kill effects can occur in training or combat. Effects in training or combat can occur when susceptible personnel or equipment are accidentally exposed by getting too close to nonweapons-directed energy sources such as radio transmitters, radars, electronic warfare jamming devices, television transmitters, television or communications microwave relays, laser range finders, laser designators, laser jammers, and similar devices. Some of these mission-kill effects are also sometimes technically categorized as electromagnetic interference or electromagnetic effects. Directed energy warfare is the use of and defense against directed energy weapons and devices in combat. Mission kill is one of a very large continuum of DEW effects on targets. The large variety of DEW target effects are used to provide a very wide range of combat functions including the following: detection of targets, illumination of targets to supplement night-viewing systems, identification and classification of targets, disruption of target function or mission, damage of targets, and destruction of targets. Examples of directed energy mission-kill devices include hand-held, crew-served, or vehicular-mounted laser devices and vehicular-mounted or artillery-delivered radio frequency devices. http://www.deps.org/

AFGHANISTAN/GERMANY. DETAILS OF
NEW GERMAN-RUN VOICE OF FREEDOM
RADIO IN KABUL | Text of report in English
by Radio Netherlands "Media Network" web
site on 6 August

A Germany-funded radio station, Voice of Freedom, started broadcasts
to Kabul in Dari and Pashto on 4 August 2002. Programming on the FM
station includes news, music, features and language courses. The
station is based in the German military camp to the east of Kabul.
German experts have trained two Afghan newsreaders and several
technicians to work for the station.

Richard Hunsicker, spokesman for the German forces, says that the
running costs of 2,000 US dollars a month come from the German
military budget. The station was officially opened by Afghan Minister
of Information and Culture, Sayed M. Rahin. Source: Radio Netherlands

AAAAAAAAAAAGGGHGHGHHGHHHHGHHHHHHHHHHH!!!!!!!!!!!!!!!!!
Continuity of Consciousness, by definition, presupposes
that the perceptive core tracks continuously across all
parallel realities... One femtosecond is to a second as
one second is to 32.6 million years! The "Parallel
Universe" theory ("Many-Worlds Theory") is a defunct
bastardization of an ill-perceived anthropocentric
misunderstanding of the double-slit experiment,
[Collapse of a Quantum Wave Function into a Measurable
Particle w/ History]: In the "Many Worlds" theory of
quantum physics, popularized by David Deutsch and
others, (<http://www.qubit.org/>), our conscious selves
inhabit an infinite realm of parallel universes:
a "multiverse." Now, over the many years wherein we've
all made countless decisions both conscious and
automatic, and the countless times we've all pondered
ending our own miserable myriad existences, what if we
actually did? Would it seem like a cruel fate for
consciousness to have no final escape from awareness,
perception and embeddedness...? And what if it's true?!
Whooooooooooshhh!!!! Is everyone the same biospheric
personage? Are we dispersed across an undifferentiated
light-cone of ultra-dimensional potentiality in nature,
and only specified in particularity as an animal life form?
<http://www.innerx.net/personal/tsmith/ManyWorlds.html>
Who-are-we to suffer such an endless fate? And what does it
mean?!! What if there is a seamless continuity to sentience,
so that no matter how many times you actually "die," your
multiversal "self" continues uninterrupted?

Don't know about Peter, but I've worked them on 100 watts
and a dipole. So, no I don't need XY3.

Got a neat postcard and everything.

Oh, and NOT on a net.

Last time I counted, I was up to about the last
80 or so... These last ones are the toughies.
I'm not proud, if an all time new one showed
up on a net, I'd get in line too.

But first, I'd need a lot more spare time than
I have now! Got to pay the bills and feed the
face. I'm not eligible to be a man of leisure
for some time yet. On of my old time friends,
Jim N7IZD, spent many happy hours on the
various DX nets. He worked everything that
came down the pike. Sorry to say that he's
an SK now...

CU on the bands.

2593. Re: QSL Managers HELP

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-11 09:31:36 UTC
From: "Dave, AA6YQ" <dhb@mediaone.net>
Message-ID: <Y9q59.10119$M4.834699@newsread2.prod.itd.earthlink.net>
Source record: 12469

Welcome back, Dave!

There are several generic sources of QSL information:

1. web sites that collect such information and provide search engines to let you find it, e.g. QRZ, Buckmaster, K4UTE

2. more than 100 country callbooks that are published on the web

4. DXClusters whose spot archives can be searched via the web

5. callbook CDROMS, e.g. the Radio Amateur's Callbook (RAC)

6. commercial QSL databases, e.g. the GOLIST

Several years ago, I developed an application called Pathfinder to let you enter a callsign once and check all of these sources. There are two implementations of Pathfinder; both are completely free.

The Pathfinder Web Client (PWC) is accessible via http://www.qsl.net/pathfinder/WebClient/ - enter a callsign, and you can sequentially search 10 different QSL web sites (including some like RW1QM and QSLinfo that check multiple databases, and the DXSummit cluster's spot logs back to 1997). From the callsign you enter, the PWC determines its DXCC entity; if there's an online callbook for that entity, clicking the CBA button searches that callbook. The PWC also gives you access to the GOLIST online database. While the GOLIST is a subscription service, its proprietor (John, K1XN) allows non-subscribers up to 30 free searches per month. Since you can check multiple sites with a few mouse clicks, itone can verify a route by checking for consistency among multiple sources.

Pathfinder is a Windows application that you download and install on your PC. It has all of the PWC's functionality, but also allows you to determine which searches are assigned to its 12 buttons. Pathfinder also allows you to search the RAC if you've installed it on your PC. If you discover a new source of online QSL information, you can configure Pathfinder to search it with a single mouse click. Pathfinder interoperates with other members of the freeware DXLab Suite, all of which are available via www.qsl.net/dxlab .

To get a list of several URLs which provide this kind of information,
do a search for QSL Manager at www.radio-portal.org

radio-portal i's a search engine with more than 36.000 hobby related
links especially for hams and SWLs.

Congratulations on your entity count Peter.

My point is that for many people, the NET is one of several very useful
tools that can save you many hours tuning around or being lucky enough to
find rare DX just firing up on a band before the "big guns" find it or
someone spots it on the DXCluster.

I'm sure that many people also find the regular NET or group schedule (
sked) very entertaining and informative, as well as giving them
opportunities to increase their circle of "radio friends".

I'm not saying that NETS, DX or otherwise, are the be all and end all of
DX'ing.. just that many people do enjoy them on a regular basis.. so I say
live and let live.
What I do find annoying are the policemen that show up on the frequency
you've been using for a while having made some nice QSO's, and *telling*
you, rather than asking nicely, to QSY because the XYZ NET has always used

this QRG for the last 50 years etc. The NET should be able to QSY +/- a few KHz either way without difficulty?

Anyway, I somehow doubt that NETs will be disappearing in the near future and I do believe that they fulfil some peoples' needs... just my own personal opinion.

Incidentally, I also use 100w to a Butternut 6 band vertical which is ground mounted with a small buried radial system and located approximately 400m from the ocean.
Last time I checked, I had QSO's with over 180 entities in 18 months operating.
I do not use the DX Cluster, just tune around, gather info from other operators and call CQ just to see what comes back.

Good DX Peter!

Paul MW0CDO.

Sacramento is in the "local" coverage area of KGO. Do you have obvious
geographic limitations that keep you from receiving it?
http://www.radio-locator.com/cgi-bin/pat?call=KGO&band=AM&status=L&hours=U

Anyway, just use a random-legth wire as long and as high as possible.
If you want to connect an earth ground to the radio or to the antenna
via a lightning suppresor, feel free to do so. It probably won't affect
reception. I don't recommend leaving the antenna connected to the radio
when not in use.

Is this a joke? You should be within the local coverage area of this
station. If you can't hear it without an external antenna, don't
bother with a radio. You can listen to it 24/7 via the Internet by
going to this web site:

http://www.kgoam810.com/

It has to be, When I visit my Sister in law and family in Redding
(about 100 miles north of Sacramento) I get KGO on a little hand held.
Sacratamato should be easy.

I'm beginning to think this poster is a troll. A couple weeks ago he
wanted to know what tuner was best to receive LA stations from
Sacramento. Obviously he's fishing for the answer that he likes.
Hey, acehole....string some wire out between some trees in the yard and
connect it to whichever radio you prefer. If that isn't satisfactory
then string more wire. If its still not acceptable continue repeating
the process in the direction of LA or SF. You will eventually get a
local quality signal.
If you can't even pick up KGO, no magic formulas or tuners can do this.

They've been sorted, and counted, and divided into piles vs. how much
money they had in them, photographed, and posted on a web page.
But I'm not sure they've all been sent yet........

Hi Bill,

I had the same problem - sent an e-mail to N8OO who was taking the list.
He replied that the QSL should go to DK6CW - that one IS listed on
QRZ.COM. Don't know who or what is UT7DW, perhaps it's a new call or a
temp one.

G'Day,

QSL cards for the Mellish Reef VK9ML 2002 DXpedition
have been received from the printers, and are now being
despatched in order of receipt.

Our thanks to YAESU for their great support !

Since the QSL database has date of despatch information,
we are considering making the QSL despatch date
available as an on-line query from the website ?

Would this service be useful ?

Feedback welcome here.

No one was taking a list when I worked him, but I will try DK6CW.

It took almost two years to get an Albanian QSL (probably due to GSs missing
in the mail) and I would like to have a second one.

Thanks,

Bill Ogden

Actually you have been given helpful advice but perhaps it's
not the advice you're looking for. If you're looking for some
particular combination of antenna, length, or height that will work
for you the answer is to experiment. Wire's cheap (about 15.50
a 500ft. spool of 14AWG insulated at Home Depot). Before
becoming a Ham I relied on a Radio Shack DX-392 which is about
the level of radio as you have as far as AM is concerned. I
found that I reached a point of diminishing returns regading
reception as more wire gave more noise and overloaded the radio.

Is the reception better via your *parked* car radio vs. the GE ? Also,
have you tried setting the GE on your car seat and going for a drive?
If there is local RFI this might give you some clues. I can not comment
on wow and squelch as we might have different names for the same
events. I have no pre-judgement of your coverage area as I am on
the other side of the country. Some radio transmissions I enjoy via
internet, others live via "real" radios. So I don't care if you want it
via the GE rather than the PC.

The bottom line is to stop typing and start trying. I am sure
there are EE's and such here who know more than I do. But it seems
basic to me that receptivity is related to incoming signal, local conditions,
your antenna, and your reciever. 3 of those 4 conditions you can easily
vary. Why not experiment and report back your results? Nothing like a
fistful of data to fan the flames of discussion !<wink>

Wow indicates a mechanical problem with your tape drive.

Squelch is a feature of your NBFM receiver.

I still think this is a troll.

2620. Amateur CB Radio

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-13 08:52:11 UTC
From: Walt Davidson <walt99@tiscali.co.uk>
Message-ID: <d0hhlu4lsn3ep483csciel3o44dtqpdd20@4ax.com>
Source record: 12496

The licensing authority in the UK is in the process of combining the amateur radio and CB services in this country into a single, unified service under the banner of "Hobby Radio". A government statistical forecast published this month indicates that there is a target to phase out the separate CB license completely by 2004.

As a major step towards the unification of the two services, the licensing authority, working in collusion with one of the UK's amateur radio societies, has introduced a so-called "Foundation Amateur Radio License". To obtain this license, which gives access to all modes on all the amateur bands between 1.8 MHz and 440 MHz, with the exception of the 28 MHz band, the requirement for a Morse Test has been waived (in contravention of the international ITU agreement) and a minimalist technical "test" is all that is required to qualify. The technical test includes about twenty questions of the type, "What is the correct wiring for a power plug?" and "Is resistance measured in ohms, volts or amps?". Even a knowledge of Ohm's Law is deemed too advanced for this class of license test. A so-called "Morse Appreciation" is performed, which involves listening to individual Morse characters, sent as slowly and as often as desired, and looking them up individually in a textbook.

The callsigns issued for this type of pseudo-CB license are in the M3*** series. In common with other CB licensees, they are allowed to use only commercially-made, type-approved equipment. This unwelcome feature alone, is totally contrary to the traditional amateur radio ethic of experimentation.

If, like me, you deprecate this ultimate step in the dumbing-down and devaluation of our hobby, I hope you will make your disapproval clear by refraining from making contact with, or acknowledging the existence of, the M3*** CB calls on the amateur bands. There is a perfectly adequate Novice Licence scheme already in existence in the UK, which serves as a good introductory path into the hobby.

Hello Walt,
That is some of the very BEST Ham Radio news I have heard in a long time Walt. Thank you for posting it. It's going to bring many more people into the ranks. It also serves to establish at long last a "no-Morse code" license (I read about the "Morse appreciation" - test -) and should go a long ways to encouraging other countries to do the same. It is long overdue. I am also thrilled to see the new and correct nomenclature of "Hobby Radio" be used. Too many Hams make radio a religion and a life's philosophy. Especially hard-core CW advocates and many DX'ers. It is a "hobby" and the UK has it nailed 100% correctly.

Moreover your advice to ignore and purposely not make contacts with any of the new license holders once they get on the air is really silly. It makes you look like an asshole and an old curmudgeon fuck dick. I hope instead the new license holders ignore "YOU". They would be far better off to do so and thus never have to meet you or hear your prejudiced views on "Hobby Radio"

Have a nice day.....

After occasionally tuning across the CB frequencies in an attempt to
see what people are so steadfastly defending, I have routinely heard
very little verbal exchange of ideas. Primarily I see radios being used
as a sort of cathartic tool of cowards for whipping on other anonymous
radio signals without fear of a knuckle sandwich, or even worse, a tool
for broadcasting deranged and psychotic outbursts and incomprehensible
word salads, gibberish and other exhibitions of lunacy.

Perhaps this is a local problem, in which case I apologize to those who
may have been driven off for meaningful exercise of the 1st Amendment
here, or in other areas those who have truly been able to.

Otherwise what's to "talk" to?

Didn't you mean "... drunken lunacy."?
Not far from here is a large truck stop.
It's kinda fun listening to the ladies on their way to service the truckers.

No actually I am not d"ic"king around (I'll assume everyone here is an adult). I am however surprised that anyone would be screwing around (ala rec.audio.opinion) here at this group...the level of mistrust is astonishing. I do appreciate your advice and will most certainly experiment with differing wire lengths. I had thought there was some formula that would give an optimum wire length...oh well, the devil hates a coward, so here I come Home Despot.

As for "wow" ... I meant a widely varying signal strength that translates into the radio volume ranging from whisper quiet to quite loud. By "squelch" I meant to say that the signal dissolves (loudly) into static and then gradually resolves itself into a listenable signal.

I clearly don't know shite about dx'ing, so I appreciate anyone who answered with actual advice..believe me I will experiment.

Thanks

Thats normal for early evening conditions at that distance. It should
be pretty stable during the day and not fade as much after about
midnight.

It would be a real dumb spammer to use his own address. And the headers
can be fake also. Could have been your next door neighbor. You can
whine to the ISP in the headers but its doubtful they will care. It may
not have come from them or one of their clients.
And there's the stories of your complaint carrying YOUR address getting
back to the original spammer and he mail bombs YOU.
Best to ignore them.

Long ago, I was a confirmed "AM DXer".

More wire, up higher.
Good ground.
You don't need large wire.
I used a lot of #18 and smaller.
Get it from junked transformers.
Build a high Q tuner to put ahead of the radio.
You can use it to notch out that strong local station that overloads your
radio.
Try a tuned and amplified loop.
Square is ok, two or three feet on a side, perhaps 20-30 turns of that small
wire.
Expect that signals, particularly at medium distances, will have a lot of
fading and phase distortion. No way around that.
Used to be some very good magazines on the topic.

Mainly ... play around until you get something that works.

As would I, and as I do quite regularly. Sometimes, however, there are
just no pileups to sit in on!

There is a place for the DX net in ham radio just so long as there are
DX Clusters that serve as the alarm for every QRO operator from
Mongolia to Montreal. I live in New York City and my life revolves
around many factors beside ham radio, thus my antenna and power
limitations are modest--100W and a multi-band dipole at 35 feet. I
work as many entities on as many bands as I can find the time for and
can get a signal into.

When I tune across the band and there's NOTHING DOING in terms of DX,
and up pops a *rare* entity that I don't have yet onto a net, you're
darn tootin' that I'm going to try to get a QSO in...IF I can hear
him, of course! I then put a star beside the entity name and add it to
my list of countries to look for to get one "in the wild."

Yes, it can be said that working a rare one through a net is like
killing a penned deer rather than going on the hunt. Fair enough. But
what if your original goal was simply to enjoy a nice venison steak?
Not everyone is a Big Game Hunter who must win at all costs.

I get a kick out of knowing that my puny little signal can be heard
all over the world, and I especially love the personal touch of
QSLing. That these cards can get me a few nice pieces of paper for the
shack walls, all the better. I also enjoy the hunt, but if the choice
is sitting and working another F or G or I versus having a shot at an
A3 or T30--sorry folks--I'm going to try the exotic.

That inability is present far more *outside* the nets than on them, in my opinion...especially on rare entity pileups. I can't say I've ever heard a chorus of "SPLEET SPLEEEEEET SPLEEEEEEEEEEEET" over the DX on a DX net, nor have I heard "who's the DX" sixteen gazillion times in a row over top of the poor sod.

I also rarely hear some QRO Loudmouth Schnook engage in a meandering five minute QSO with a DX station, only to end it with "I know there are many others calling." I dislike those

If anybody thinks the occasional 85-in-the-shade DX net operator's skills are lousy, take a listen to a real pileup next time Ducie gets activated or when the P5 pokes his head up on 15. See which set of skills is worse. I doubt it will be on the net.

Whilst you're at it, compare the hourly "hit rate" of a well-operated
dxpedition with that of a DX station who uses the crutch of a DX net.

500 vs. 30, maybe?

There are other ways to fight spam, but these require at least a minimal
understanding of Usenet in general and NNTP in particular. Your
unwillingness to get a clue (Hint: RfC 1036 is free for everyone to read)
simply shows that you prefer others to do your work. But then, you like to
work in Deee-X nets, don't you?

I've only been into DX a short time but is it just me or has 20 meters been just been pretty much dead the last couple of weeks with hardly any DX in the phone portion of the band. I monitor the packet clusters and lots of reports of CW on 20 but not much phone. And the stuff that does get reported on the phone portion of the band, most of the time, I can't hear it because of all the QRM going on. I have a pretty decent setup. Running a 2 element 5 band quad up about 50' and I've found that generally if I can hear them I can work them.

Thanks
Matt

To me Amateur Radio is a hobby, but to the FCC it is listed as a service, just as broadcast radio. I chase severe storms and work the weather nets which is providing a service, but to me it's still a hobby as I do it for fun. (I've also seen 5 tornados) I don't care if the individual spends time on CW, digital, TV, shooting the breeze, better known as BSing, or just listening. I don't care if they can copy 40 WPM, or just recognize that afful sound is CW. However, I will confess to setting the rig out in the shop to W1AW and listening to high speed code practice while building an airplane.

The ones in here are set up with the computers for storm chasing, logging, and DXing.

However if you take the word Amateur which is derived from Latin meaning one who does something for the love of doing it and add a Noun such as Radio, then it becomes one who does radio for the love of doing it. (rough translation)

As long as the government keeps treating us as a service we are in a far better position to counter (protect our frequencies from) other groups who would like the frequencies for their own. I would not like to see the word hobby replace the word service as here in the states it would cost us dearly.

Calling the Amateur Radio Service a Hobby would set a dangerous precident in protecting our frequencies at a time when great strides are being made to protect our ability to erect antennas and stations.

BTW, the antenna system here was put up entirely by hand with me doing "all" the climbing. The only place machinery was used was in digging the guy anchor holes and setting the 300# plus guy anchors in those holes. And, yes they did deliver the concrete with a truck. <:-))
http://www.rogerhalstead.com/tower.htm Even with most of the pictures being small links, the page takes a while to load. There's a lot there.

Even though I did all the climbing for erecting the tower and antennas (at my age), my wife put her foot down and said no more climbing for the younger guys. Besides it's time I can devote to building that 335 MPH aerobatic

hotrod. <:-)) Yes, there is a page for it too.

BTW, I spend very little time on the air. Too many fun things to do. (and not enough money)

Good Grief !! Anyway,... Here's an URL for AM Loop Antennas:

http://www.mindspring.com/~brucec/amloop.htm

Any search for the same on Yahoo,etc. will reveal more.
I would go with a Loop as it's easy to build, portable, much
more compact than a longwire *and* offers you some signal
selectivity. That is, if you really were getting a strong local
RFI the Loop might null it quite well. A good first project.

Give me a cup of coffee and a dougnut and I'll be the first
to be D"un"king around.

Well, the faked address is from Yahoo. I got these two by searching for the header IP address in Whois - I'm just trying to figure out how accurate that info is, since it would appear that the guy has a static IP address from Singapore and uses a Yahoo.com as a dummy. Crude but sufficient?

Anything you see in the headers can be faked. Or if the .sg ISP is
running with an open server, anybody can telnet right in. The lists of
open servers gets passed around amongst spammers along with the spam
address lists :-(

2652. ZS1AN/P DASSEN ISLAND LIGHTHOUSE FINAL UPDATE

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-15 12:31:30 UTC
From: Andrew ZS1AN <zs1an@remove-this.qsl.net>
Message-ID: <3D5B9F22.40402@remove-this.qsl.net>
Source record: 12378
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur,alt.ham-radio,rec.ham-radio

As previously announced I plan to be operational from Dassen Island Lighthouse (IOTA AF-064, ARLHS SAF-042, WLA LH-0423) from 1600 UTC on Friday 16 August until 1200 UTC on Sunday 18 August for International Lighthouse and Lightship Weekend 2002. This message is the final announcement and includes the latest weather and operating information.

WORLD LIGHTHOUSE AWARD

The World Lighthouse Award has issued the number LH-0423 for Dassen Island lighthouse. This will be its first activation for the WLA. My thanks to Don W9DC for facilitating this. My QSL card will include the WLA number as well as ARLHS and IOTA information.

WEATHER

I have discussed the latest weather forecast with the skipper of the boat which will be taking me to the island. Although it is somewhat windier than hoped it is still likely that we will be able to make the trip on Friday afternoon and be operational by 1600 UTC on 16 August as planned. If the weather does not play ball on Friday then I will go on Saturday morning instead, in which case I should be operational by 0800 UTC on 17 August. I plan to operate until 1200 UTC on Sunday 18 August; however it is possible that the weather will keep me on the island longer than expected in which case I will remain operational until I am able to leave the island.

OPERATING SCHEDULE

I have updated my operating schedule to take into account the latest solar flux index forecasts for the weekend, which are substantially better than the forecasts I used previously. My planned schedule is as follows (all times UTC):

0500-0600 7026 CW
0600-0800 14026 CW
0800-0900 No operation
0900-1000 14026 CW
1000-1100 14226 USB (primarily for ZS lighthouses)
1100-1200 No operation
1200-1500 21026 CW
1500-1600 14026 CW
1600-1900 21026 CW
1900-2100 14026 CW
2100-2200 7026 CW

This schedule will be repeated on all days for which I am operational. Please see it as a guide only as my operating times and frequencies will take into account actual propagation conditions and I will take breaks to walk on the island etc.

Further information, including propagation forecasts, can be found at http://www.qsl.net/zs1an/dassen.html

QSL INFORMATION

Please QSL direct to

PO Box 350
Newlands 7725
South Africa

Please include a green stamp or IRC if you would like a direct reply; all others will be sent via the bureau.

If you are a FISTS member and your QSL card (with your FISTS membership number) reaches me before the end of September then I will QSL via the FISTS bureau at no charge. I intend to send a single parcel of cards to the FISTS bureau in early October. My FISTS number is 8921.

2653. Best CW BAnd For Portable QRP Work?

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-16 14:26:53 UTC
From: wa2si@arrl.net
Message-ID: <b7d1465c.0208160626.5a723179@posting.google.com>
Source record: 12379

Hi all,

I would like to hear opinions on the best band for QRP CW work. Given that the sunspot cycle in on the downslide, in a few years I'd like to do some portable QRP work abroad. Of course, one must consider the manageability of a portable doublet (Or perhaps a folded dipole?) for the desired band(s) of operation. That's why I ordered a 20-meter Wilderness SST (They don't offer a 15-meter model.) QRP CW rig kit. A half-wave doublet would only be approx. 33 ft. long. The first night I arrived in Quito, we went on the roof of my uncle's apartment building to enjoy a breathtaking view of the city at night...more than enough space for a 33 ft. dipole.

Anyhoo...after building the SST, I'd kinda like to build an Elecraft K1 four band QRP CW rig kit. It has an option for an internal antenna tuner and a noise blanker that I'd also want. It comes with 40, 30, 20, and either 17 or 15-meters as the last band. It appears to be a sweet rig for such a small package, but at $473...it's a tad pricey. That's why I wonder if it's really worth it for just a rig that'll be employed on vacations, long weekends, and perhaps the occasional daytrip? The SST is pretty cost effective for such a small package. I'm wondering if it'll be all I ever really need?

I have all bands available to me at home, but no practical experience with their characteristics...especially at the bottom of a cycle. If 2 watts on 20-meters'll do the job reliably...then great! I can't really say that I'd look forward to hanging a 66 ft. dipole ANYWHERE on vacation, however...? My uncle also owns a farm about three blocks away from the Mitad del Mundo site and they also have a post office right there so you can have your postcards postmarked 'Mitad del Mundo' or "middle of the world." I'd love to send some QSL cards out from there with my HC2 call and a picture of the site. The next trip also includes plans for a visit to the Galapagos Isles., so the order for the custom QSL cards will go in as soon as I know the call.

Sorry, if I rambled on...this is an example of how CW can really work toward a newbie's advantage. Sure, I could go out and buy a FT-817 and try to work voice. But when you're staying in a quiet house/apartment and you don't want to disturb/awaken the entire household, (And that damn dog could hear a mouse pee on cotton!) what better way than to don a set of headphones and break out the paddles? There's also a nice sense of accomplishment with putting something OTA that you've built (Although I acknowledge that these kits aren't exactly "homebrew.")...especially with a nice homebrew aerial. Thanks in advance for any comments.

Are you using a one or two turn coupling loop? How are you connecting
it to the radio and what kind of input does the radio have (coaxial or
terminal strip)? Do you have the cap in parallel with the loop?
Your dimensions are appropriate for the broadcast band but your post
shows up in the amateur dx newsgroup. What freq range are you actually
interested in?

>Dave AA1VX

Gee, Dave, I wonder why they would be "whisper weak" at your house ?

"It hasn't been easy with an R7000 vertical..........."

From the Pacific, and Asia, W1 land is a tuff nut to crack. From Guam
it took a really good day to work W1's (when W3's and 4's were loud),
and I wasn't using a vertical.

Lot of time the best shot to W1 was over the pole (north) but that's
gonna be tuff to do with a R7000 vertical.

If they put up monobanders and use kilowatts it's still going to be
difficult to work them on a vertical with 100 watts, especially during
the summer when conditions are this lousy.

Maybe you can go over to KC1XX's house and work them from there....

Hi All,

Back in 1980, when I was first licensed, I bought a "Radio Amateur's Prefix Map of the World" from the "Radio Amateur's Callbook Company"--the same company that used to publish the "Flying Red Horse Callbook". The map has been up on my wall for some 22 years, and is starting to show some age, as well as being outdated as many new prefixes have been assigned over the past 22 years. It's a good sized map in full color, and measures about 27 X 40, and has CQ zones on 1 side and ITU zones on the other side.

Is there anything like this available today ??? If there is, where can I obtain one ??? Thanks for your responses.

I have the one from the ARRL and for $12 you can't beat it. I like it
because it shows you the beam headings.

Having been in Little League Baseball, I find Charles' attitude the same
as what many parents expect. Their kids who are pitiful players are
worthy of a table full of 'participation' trophies even when they come
in last place. So whats the prize for the real winners?
This "you can be a superstar if you try" crap simply doesn't work when
you try to spread it across different disciplines. Its an insult to the
talented and a false hope to the hopeless.
Anybody who has the ambition to excel in something typically has the
talent to do so or else that ambition is short lived. You can't
legislate it by force-feeding government edicts that make them appear to
be equal.
I'm all for any free-bander who can put together a fine station and work
1000 countries without a bunch of frigging echoes, swingbacks, truck
stop chatter and all that other crap. They become hams quite naturally.
On the other hand, toads like Charles (see his pix) signing names like
"fantastic@sex" pretty much reveal his character as something you don't
want your children to encounter. He approves opening the doors simply
to accumulate a bigger corral for his deviance and you don't have to
guess very far what that might be.

Flying Horse (RAC) Call Book
Winter 2003 Edition
The Last of an Amateur Radio Tradition

From a letter by Bob Hughes, publisher of Radio Amateur Call Book
It saddens me to advise you that the 2003 Winter edition of the Radio Amateur Callbook will be our last and final edition. An announcement will be made in the September trade magazines and advertisements in these magazines will notify the Radio Amateur community of our decision.

As you know sales of the Callbook hae declined due to the accessibility to the FCC database via the Internet and a general decline in amateur radio growth.

The RAC callbook has been an Amateur institution since 1920 and will be missed by DXers word wide. RAC was the "DXer's Bible" for international call sign and addresses.
If you are interested in purchasing the last edition of the RAC call book, I have started a Pre-sale list. I will order ony enough of the last edition to cover the pre-sold orders. Click on the email address below to send me a message stating"add me to the RAC list". The price will stay the same at $38.50 FREE shipping in USA, $5.00 for foreign orders. In your message be sure to include your Call sign and email address.

Message-ID: <69s0mu0gtnf2jtgvk2nl79pnpgeohkilnj@4ax.com>
Source record: 12394

Hi,

I just got my recent DXCC submission back from the league and I noticed they list Australs, French Polynesia and Marquesas as separate entities. This is the first I've seen of there being 3 different FO entities. Since I have Australs and MArquesas confirmed, and hopefully Bora-Bora on the way, I didn't realize I could submit these extra FOs for credit.

No logger I've ever used differentiates any of these entities. Am I immagining things?

2669. question about sending QSL cards

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-19 04:39:14 UTC
From: W5LL <mattpatt@1starnet.com>
Message-ID: <SD_79.67874$2p2.3283837@bin4.nnrp.aus1.giganews.com>
Source record: 12395

Okay, here's what I've been doing. When sending a QSL to a foreign country I have 2 different sizes of envelopes. The SASE is a 5 1/4" x 8 3/4" greeting card envelope. This envelope goes inside one which is slightly bigger. Both are white. I've only been QSL'ing for a short time now and I find that the type of envelopes I've been using alows one to eaily "candle" the envelope to see if there is money inside. Obviously, my concern is the QSL getting to it's destination which is why I chose plain white envelopes instead of the manilla envelopes with the clasp. I was just wondering what others use for their QSL envelopes. My town is kinda small so the selection is kinda limited. We don't have the "european" envoleopes around here, the ones that have red and blue stripes around the edges and say Air Mail on them. I've just printed out a bunch a labels on my laser printer that said "By Air Mail--Par Avion" on them and have been using those when sending a SASE and QSL to a foreign country. One other alternative would be to use the typical "manilla" envelopes with the clasp. They are more secure as you can't see through them but I think it makes the envelope look more obvious to dishonest postal workers. I'm just looking for suggestions and would like to know what you use and why you think it works.

Thanks
Matt
W5LL

Yes, it's been that way since March 31, 1998 when they were added to the list.

> No logger I've ever used differentiates any of these entities. Am I
> immagining things?

No logger is smart enough to do this automatically for every callsign unless you tell it to. In other words, you have to actively find out where the FO is operating from, then select the proper DXCC in you logging program, since it will probably default to FO/p (French Polynesia). Any decent logging program offers either frequent updates to its database or an option for a user to do it himself. You have to stay on top of the updates if you want to have a current database. It's as simple as downloading from a website nowadays.

I worked them this weekend, 5-3 signals and a hour of calling. It was the
first time I was able to hear them at all. Most of the time I would see
spots and would not be able to hear anything at all from them.
I noticed that most of the no hear spots were from 4 and 5 land. I believe
that propagation is always much better from the southern latitudes in the
states. So if I retire and move south, maybe I can more easily pick up the
last 107 countries I need.

Thanks. That's good news.

I'll keep that list handy to the shack. I noticed 3D2 and VP6 are like
that as well. Dunno about any others off the top of my head, but I'll
bet there are a few more.

Source record: 12403

Hi Matt, (et al),

Here's a brief overview of what I've been using now with very good results.

My outbound envelope containing my SAE, GS and card is a number 10 (standard size) self-adhesive security type. I bought 500 at a Costco last fall and I find them to be of very good quality and resistant to prying eyes. You can find them everywhere for next to nothing. The ones I use are made my Mead, but I'm sure there are others that are just as good.

For return SAE I use a number 7 or number 9 envelope. These are slightly smaller height-wise than a number 10. The difference is the width (7s are 3 7/8" x 7 1/2", narrower than 9s), but both will fit just about any QSL you will get back. I've never had one mangled in either size. One bog problem now is finding a source for these envelopes. I used a wonderful combination of Eaton Air Mail envelopes for the last year, but Eaton has since stopped making them.

I found Ron, W7NN's web site (www.hamstuff.com) had what I needed for a good price. These are security #7 envelopes, 22# paper and of good construction. They are NOT air-mail envelopes, but as I've been finidng out, that's becoming less of an issue these days.

I only wish I could find a source for pre-gummed #7 security envelopes.

As for air-mail (red and blud stripes) or non-air-mail envelopes, I don't know that it makes much difference. For one thing, I've had a LOT of hams scratch out "Air Mail" on my return SAE and send it printed matter rate. It *still* gets to me in a week to 10 days from wherever. Second, the nice bright and colourful AIR MAIL printing sticks out like a sore thumb, and if you're worried about postal thieves, I'd think you'd not want your return card being diverted for extra attention, even thoughit's just a card--once a dishonest employee realizes there's nothing of value in it, your prized card and envelope might just be thrown out to "hide" the evidence of tampering.

I compromised a bit. I purchased an AIR MAIL/PAR AVION rubber stamp (as well as a round "QSO Verified by W2IRT" stamp) from W9XR's X-Stamper site (http://www.qth.com/stamper/stamp1.htm -- 5 day delivery of a custom stamp for a very good price). I stamp the white return envelope front and back with this air mail stamp.

Some other tips you might be interested in if you're concerned about theft.

Make your outbound mailer as inconspicuous as possible, and as resistant to prying eyes as possible. If sending to a suspect country (ex-USSR, many south American countries, etc), I put the GS and card inside the security SAE. If it's a critical card, I'd also consider wrapping everything in a piece of carbon paper or black construction paper. Remember to put the SAE into the outbound envelope UPSIDE DOWN so that if the DX station uses an electric envelope opener, your return envelope's flap won't risk being amputated!

Another thing I do is I rubber stamp my outgoing envelope with my business name and return address rather than my personal name. It's been suggested that thieves are less likely to tamper with business-looking mail than personal mail. I also used a postal meter for a while instead of stamps to reduce the possibility of theives santching my letter because of the nice 80-cent stamp.

A little thing you might also want to consider is putting your callsign *under the flap* of the return envelope, just in case the foreign station (or more likely, manager) accidentally mis-matches your QSL card and envelope. This is the ONLY place that ANY CALLSIGN should ever appear on ANY envelope since once the SAE is sealed, it's invisible, but it's right there for the envelope stuffer to see when he's about to do the stuffing! Callsigns are postal short-hand for "Steal Me Please!"

Incidentally, you don't need to print AIR MAIL stickers up--your local (in the USA) post office has really nice and very sticky dark blue ones that you can get for free.

If I'm sending to any country where I suspect tampering might be a concern, I put everything into the return SAE as I said previously, put it in upside down, then seal the outbound envelope's flap with packing tape. Across the tape I put one of these USPS AIR MAIL stickers (usually diagonally) so that it bridges the flap, body and packing tape. I might also put an Air Mail sticker on the front, or if not, I'll just use my rubber stamp.

Finally, to make your mailings more business-like, and thus not attract as much attention, I use my logging software (DX Base) print up delivery labels. I've found that ever since going over to that method of addressing outbound envelopes, I've gotten a MUCH higher rate of return. That and not using IRCs!!

Of course, you can save yourself a lot of anguish by using mint stamps for the countries you're QSLing instead of sending Green Stamps! I now have about 5 sets of mint stamps for the countries in which a lot of QSL managers are located (Spain, Germany, France, England and Italy).

Good luck!

2678. SWL antenna help needed, please!

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-19 18:45:41 UTC
From: secret_studio@charter.net
Message-ID: <3d613bc0.9958229@news.charter.net>
Source record: 12404

Greetings,

Here's my situation. I need suggestions on antennas for SWL (not transmit).

1. I am blind. Erecting outdoor antennas is difficult for me, and no local hams feel like lending a hand.
2. My one-story home QTH is a.) on the north slope of a hill b.) surrounded by power lines on all four sides, and c.) is in the lobe of a 5 kW A.M. broadcast station at 920 kHz.
3. I'm using an old IC-751 and a Sangean '803 as receivers; I'll soon add an NRD-535, and pull the Icom out of service.
4. Home QTH has a 30-foot (approx 10 meters) expanse of attic, where it will be very simple to erect a horizontal wire antenna, or put a loop, etc.

Suggestions from the experts are needed and welcome. Please reply to the e-mail address shown below.

Hey Elmer! Where are you?

2680. AP2IA address

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-19 20:38:08 UTC
From: Peter Dougherty <w2irt@REMOVECAPITALSarrl.net>
Message-ID: <ncl2mu0p0snierphs8cg2ugrmuu11mkr1g@4ax.com>
Source record: 12406

Hi,

I was wondering if anybody's recently gotten a card from AP2IA, and if so, about how long was the turn-around time? I sent a card off in February with 2 GS, and haven't heard anything back yet. That's one of the few rare-entity cards that I haven't gotten back yet and I just wanted to know if I should send another envelope/postage to him or if he just has so much to go through that it takes a long time.

Because of the recent events in that part of the world, I'm not even sure my card made it to him <grin>.

Source record: 12407

Sent off my first batch of QSL cards Friday and I got a return in the mail today. It was being sent to Denamark and had a note wrote on the envelope saying "can not use this stamp on foreign mail" with an arrow pointing to the .37 first class stamp I used. If this is the case then I'm going to get all my QSL cards back because I used all first class stamps. Is there some other type of stamp that I should be useing?? I'm a novice when it comes to sending things to foreign countries so I would appreciate any advice or tips on what I can do and how to send QSLs to foreign countries with the right type and right amount of postage.

Thanks
Matt

Message-ID: <3d616db8.18928609@news.cis.dfn.de>
Source record: 12409

Matt,
International postage regulations require all international mail to
show the denomination on the stamps. The USPS's "quick fix let's raise
the rates and print stamps without the numbers on them" won't do for
international, nor will the older ones with letters on them. You may
have your envelopes slip through, but they all should come back, if
the PO is doing their job properly :.(
As long as it says 37 cents, or whatever, you're OK. Since
international mail is 80 cents, I use two 40 cent stamps on mine (the
PO didn't have 80 centers last time I asked).
73,
Barry W2UP

Don't use the stamps that say FIRST CLASS MAIL or don't have the actual
value printed on them like the "H" stamps they issue during a postage
increase. Any others will do.

>Matt

You're welcome. Much of what I wrote has been gleaned from other Web sites as well as from personal experience. I shot a few pictures today that I'll eventually put up on a Web site showing precisely how to do it.

Here are some other things I forgot to mention in my first post:

1) Use stamps that are as boring as possible. The nicer and more unique the stamp you put on your outgoing envelope, the more attention it will attract from stamp-hounds along the route. By the same token, the current 80-cent stamp is so overwhelmingly common that it will likely be overlooked. In other words, don't get fancy!

If you have access to a postage meter, that's probably the best way to go, and is also another way to give that letter a "business" look and feel. For rare entities (where I'm overly cautious about mail being intercepted) I will take it to the post office and have them apply a meter sticker instead.

2) Don't forget that a first-class letter to Canada and Mexico (under 1 oz) is only 60 cents, not 80 cents. As other posters mentioned, for mail going outside the United States, your stamps must have a numerical value on them. Sorry to hear about them all getting kicked back. Hope you didn't have too many of them :-(

3) Don't use the small size number 6 3/4 envelopes that are sold in Staples by the boxload. They will fit a typical US card just nicely, but they will NOT fit a larger European sized card. Either the DX station will FOLD the card to fit in the envelope or they will seal the envelope over top of the card, likely getting stickum on the card itself. Neither situation is good, so just use a #7 return and you'll be happy. I think you can get them for about $3 for 25 from www.hamstuff.com.

4) If the your SAE is not of the peel-and-stick variety, and your card will be in a hot, humid environment, put a piece of wax paper between the gummed flap and body of the SAE. In hot and sticky environments,

your lick-n-stick envelope can seal itself due to the moisture in the air--which just might result in your getting no card back or getting it back through the bureau if the DX doesn't feel kind enough to give you a new envelope, or try to rescue your old one.

I just put my GS in there, and I've never heard if it getting stuck, but when I use mint stamps instead of a dollar bill (or when I put everything inside the SAE for security), I always use wax paper unless I'm sending a card to Sweden in the winter <grin>.

5) I don't personally like the so-called European size mailers. I think they actually look pretty nifty, but I've had FAR less response from cards sent using this system than anything else.

I tried the European mailers when I couldn't find my usual Eaton envelopes any more. I bought 100 of each size, and sent out 25 in late May/early June. To date, I've received a grand total on ONE back. It may just be bad luck, but it's enough for me to go back to the other way <grin>--using my #10 business envelopes.

6) What I said in my previous post about putting in the SAE upside-down is absolutly true. I reiterate this tip because in today's mail I got a card back from a manager whose automatic letter opener sliced the flap off my envelope--because I didn't follow my own advice! Sheesh, do I ever feel embarassed, and it's enough to make me triple-check in the future. Again, the likely result will be your card will go back through the bureau if at all. I was very lucky this time, and I thank John, N0JT (manager for HK0OP) for being a super nice guy and rescuing it for me and allowing one more 'new one' to come my way today!!

7) If you haven't read up on the incoming and outgoing QSL bureaus, do so. They are an incredible way to send cards out cheaply--but at the cost of speed. In a year of very heavy QSLing, I've gotten a grand total of 17 cards back so far via the bureau. I sent out over 800 in October and November of last year alone, and nothing back from that lot at all.

8) It's been said that QSLing (and ham radio in general) will teach you at least two things in life. The first is geography and the second is patience!

Good Luck. If I can think of anything else, I'll post again.

Thanks for all the replies. I feel so stupid that I didn't know that international mail requires a .80 stamp! :-) DOH! Maybe some of them slipped through because it looks like if I was going to get them all back I would have gotten them back today. If none show up tomorrow I'll assume they all went.

Thanks Again,.

Hmmm. This seems to be a case of "International = to and from USA".

The stamps we use in the UK to send letters to any country in Europe,
and any former USSR country, just have a letter "E" on them. No
denomination.

2692. DX CALL BOOK OPINION POLL

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-20 11:27:08 UTC
From: John <K1XN@arrl.net>
Message-ID: <tGp89.37222$%P3.2204494@e3500-atl2.usenetserver.com>
Source record: 12418

Hi Folks,

As you know, DXer's are losing their most reliable and comprehensive source for International call signs and addresses with the closing of RAC call book with the Winter 2003 edition. QRZ and BUCKMASTER do a fair job with North America call signs and addresses, but fail very badly in the coverage of DX call signs and addresses.

I know of a development project now underway to replace the void created by the closing of RAC. I felt it would be a very good idea to present the developer with the opinions of DXers world wide as to what they are looking for in a DX call book. Please take the time to think of the features you would like to see in a call book to assist you in getting the information you need to send /receive your qsl card or letter to a foreign DXer.

Of course, the call book must provide a dll file for software developers to interface the call book with their products.

Does the new call book need a web site?

Please send your opinions to: k1xn@golist.net and I will forward them to the developer.

Please include in your message your call sign and email address should the developer wish to contact you.

Thank you.

Peter,

I received a packet of cards from the bureau yesterday -- including a card from him. So he's still sending out cards. My last bureau envelope was about 4 months ago, so this was received during that interval.

The QSO was in April 2001, I sent my first QSL to him via the bureau in September 2001, and then sent another to him direct in May of 2002. Whether this card in the bureau envelope was in response to my 2001 bureau card or my 2002 direct card I do not know...

That sounds like another streak of 'europization'. I bet you cannot use
them in multiples for other overseas mail.
These non-denominational stamps in the US are the norm concurrent with
the rate increases. In the past they were simply marked with a letter,
I recall last time it was H and the stamps specifically said on them
Domestic Mail Only.
This go 'round they chose to do something different and didn't use a
letter (or denomination) but simply First Class is indicated on them. I
caught myself sticking a few of them on an envelope to EU and realized
it just as the last one was stuck on.
I still haven't determined how they would not be usable after the NEXT
rate increase unless the USPS has folks whose job it is to check the
date of stamps on outgoing mail. Wonder if they have an expiration
date?

You would lose that bet - it's OK to use them at their current face
value or price (I don't know how much they are sold for right now;
if it's 38 p, they are treated as a 38 p stamp) for multiple or
mixed frankings. The same applies to the British 1st and 2nd class
stamps, and to the French "1st class" stamps without any denomination.

Peter,

Did a little more digging in my log, and believe that the bureau card from AP2IA was in response to my bureau-shipped card. The bureau card exchange was for 1 qso; my direct card (which was sent in May 2002 and has not come back) listed three QSOs.

I retract my original comment. I did some research and came up with the
following from the current USPS regs....
From the USPS Domestic Mail Manual P022.2.1, as of 08/08/2002

Except for precanceled stamps that bear rate markings (e.g.,
First-Class Presort, Presorted, or Nonprofit Organization),
nondenominated postage stamps may be affixed to international mail. See
IMM 152.2d.

> nondenominated postage stamps may be affixed to international mail. See
> IMM 152.2d.
>
> -BM

And to beat this one more time, here is the excerpt from the
International Mail Manual (IMM) reference.

d. Nondenominated postage stamps (except for those that bear uniquely
domestic markings, such as First-Class
Presort, Bulk Rate, Presorted Standard, or Nonprofit Organization)
may be affixed to postal items that are sent to
foreign countries. The value of such stamps is linked to either a
current or a former domestic rate (e.g., the "H"
stamp has a postage value of $0.33). Since the international
postage rates are always higher than the comparable
domestic postage rates, mailers who affix a single nondenominated
postage stamp to their outbound mailpieces
must add additional postage to comply with the international rate
schedule. Note: The nondenominated Breast
Cancer Research semipostal stamp, which has a postage value that
is equivalent to the domestic rate for 1-ounce
letter, may be used for international mailing purposes.

So, something has changed over the years. The 'letter' and 'first
class' stamps ARE NOW VALID for international mail.

I did quite well last year with an low inverted-vee and 100W. I'm just adding to the noise by saying I don't use DX-nets, but I won't say I'll never use them. It's like fishing in a stocked pond. Sometimes you just want to eat the fish.

Source record: 12428

When it comes to HF antennas, several principles apply.
1) As high as you can get it
2) as much as you can
3) Loop or dipole will be usually be a better broad band omni directional performer than an end fed wire working against ground. If your house service power line is overhead, you can consider that to be one side of an antenna and do well with an end fed wire.

Since you are not transmitting, you get the added benefit of not having to worry about a wire in the attic making every device in your house bark at you.

A simple coil and capacitor tuner will allow you to tune for maximum signal strength. Lots of cheap wire tuners can be found on Ebay and similar places. When tuned to a frequency of interest the antenna will be less efficient at the broadcast frequency.

Good Luck
John
KA9CAR

Exactly. In my case, the chase excites me far less than getting the card and marking one more entity off my must-work list. I just can't stand listening to some of the pathetic list-lizards who work nothing but nets, and do so with such atrocious operating habits as to make the good-old-boys on Channel 19 look like Hiram Percy Maxim by comparison.

Five By Five...fifty-five...onetwothreefourfive onetwothreefourfive, double nickels...roger roger, report on the over, over...that's a good one, put it in the log...Bah. If you do work a net operation and can't get in and out in under 10 seconds, one has to wonder.

There is a very good and relevant article in this month's QST - in the VHF column, of all places.

The subject is "What is a contact?" Basically, how much information do two stations have to actually exchange to constitute a QSO?

By Emil's criteria most list/net QSOs wouldn't count. Then again, neither would many contest QSOs.

Personally, I don't find list/net DXing interesting. As long as the participants are actually exchanging real information *without the help of third parties* I do think the list/net QSOs are real.

I go to the local Walmart, buy some self sealing envelopes and some gummed envelopes, size 6 3/4. I rubber stamp my return envelopes (the gummed ones), fold them in half with a sharp crease, include either an IRC or green stamp with the card, stuff the sending envelope with the return fold down and the qsl and return postage and then seal it up. I normally include USA, CWA, EUA, or whatever in the return envelope address to make sure it gets back to the right country, and oh yes, I do avoid using non denominated stamps, and froank the envelope with the correct rate for Mexico, Canada, or the rest of the worls. Never but never include any reference to your callsign on the outside envelope.

Good man. If I had to nitpick your procedure it would be the rubber
stamp if you use it on your initial mailing as a return address as
opposed to handwriting.
All that being said, its hard to be secretive if your recipient is known
by the local postman to receive 1000 pieces of mail per month from
abroad. Thats as obvious as you selling truckloads of crack from your
residence.
War story....I once lived in a Third World place (Latin America) in a
city of 175,000. I never once saw a person in the Post Office. If
something came in for a business entity they would send a guy on a bike
to explain how they would deliver the mail for a fee, which we paid to
him. To a residential address, forget it. Boxholders had some chance
of receiving mail by virtue of having paid an appropriate 'box rental'
to the proper person.
A comprehension of third world situations goes a long way in assuring
that your mail reaches the recipient. In my six years in my third world
situation, not one single personally addressed envelope ever reached me.

Hi Gary,

May I suggest you try and look for larger return envelopes? Maybe size
7 or 9?

6 3/4 size is great for North American cards, but I've gotten several
foreign ones back folded (creased) to fit in these envelopes. The
width is fine, but European cards are often taller than a 6 3/4
envelope. I've also had DX stations seal over the card, getting
stickum on the card itself. I'll now send a 6 3/4 envelope to any
North American station or N.A. manager. To date all have been OK.

My callsign should be on next years DXCC Honor Roll-as soon as I get the Ducie card anyway, I have 4 band DXCC and close to the fifth, and very close as well to hitting the first plateau on the Challenge award. The cards that I've received through the years that wouldn't fit in a 6 3/4 envelope can be held in one hand without dropping. I find that there just aren't that many, and since I send a bunch direct, I can cut a corner by using inexpensive envelopes. I can't remember the last time I received something that didn't fit. Really.

Congrats on the Honor Roll!! I guess you have better luck than I've
had with 6 3/4's I've never had cards mutilated beyond use from them,
but I've had about 10 or 15 or so of my 450-ish cards bent over to fit
leaving a nice crease and a few that had bits of the envelope stuck to
them. All the cards were usable, but personally, I'd rather not have
them munged in any way. I guess it depends on the DX stations. You got
more "nice guys" that I did :-)

2723. YI1DZ QSL Info Needed

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-22 16:37:15 UTC
From: n7ws@nowhere.com
Message-ID: <3d65118f.6886853@news.triconet.org>
Source record: 12449

I logged a contact with YI1DZ on 20m SSB 16 March 2001 and sent a card direct in August 2001. (Don't ask me why I took so long)

In using Pathfinder and DXSummit for 2001 I don't find any spots, so question no. 1 is was this a good QSO.

My new version of DXBase logging software shows WA4JTK as manager, however, no other reference does so, nor does the previous version of DXBase, so I think this is bogus. Does anyone have a clue about this, or another route besides direct?

73,

Wes

|I see WA4JTK as the manager in the ON6DP list, but it has the note
|"found in 12/94" which isn't too helpful for recent contacts.

Hi Bob,

I just received an email from Alan. He states, "I was the manager for
1992,1993,and part of 1994. I have not been able to contact Diya(YI1DZ),at all.
I cannot confirm any cards after August,1994"

What wasn't mentioned was the use of business sized envelopes used for returns. This needs to be avoided totally. When they hit the automatic sorting machines there isn't enough heft to the contents to make them stiff and the envelopes are often rendered into pulp.

Matt,
I think it is just the summer doldrums.

Hey would you like to try a free two week trial to The Daily DX?

Bernie, W3UR

I got one direct in 38 days at the beginning of this year. Mailed
12/26/01 and
it came in on 2/2/02. I used a SASE rather than send money. Good
luck.

Hi John,
S/N 208xxxx to S/N 309xxxx, VR22 on Signal unit (large board on bottom,
right behind the large filter space). S/N 310xxxx and up, use front panel
carrier knob. I have modified the early ones to use the front panel knob.
Don't remember details offhand, but it took one diode and some wire. Hard
part is taking the board out.

Helmsman or per your proper name: John

The opening statement on your web page is just about as stupid as it is incorrect. Fed Government employees certainly do pay social security taxes. And yes, they can invest up to 12% of their pay in an independantly controlled Thrift Savings Plan. Of course that plan is subject to the whims of the stock market and not the Senators and Congressmen that you never bother to go vote for, but continiously bitch about in your web page.

By the looks and content of your web page, I doubt seriously that your a native born USA citizen and if you are, I doubt seriously that you have ever served your country. Your web page looks like you are just a cry-baby instead of a productive citizen. By the way, how much did your ham ticket cost you?

GET A LIFE JOHN...!

By the looks of your web page, I certainly think you do qualify to be a real fool. The only reason I responded to you is because you responded to a post by a U.K. ham, with only the URL to you dumb-axx web site.

I certainly don't think this country is perfect by any stretch of the imagination and I never insinuated such. But I have done enough traveling all over this world to be able to tell you that your sure as hell not going to find anything any better. If you don't like my country, leave the damn place...I'm sure no one is going to miss you.

You talk about news and how it's edited and fed to us...take a look at your own web page Mr. Smith...isn't that exactly what you are doing? It certainly is!! If you dislike the United States so much, why dont you try to help improve it? Dump that absolute garbage on your web page and start producing some productive suggestions for improvement. You have already proven you can publish total lie's about America, now why dont you prove that as an American (are you?) that you can pitch in and help?

NEVER FORGET 9/11.....

Amateur Radio Newsline™ Report 1305 August 16th, 2002

Amateur Radio Newsline report number 1305 with a release date of Friday, August 16th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Japan says no to putting communications over power lines and the NCVEC says YES to remote testing. These stories are first on amateur Radio Newsline report number 1305 coming your way right now!

(Billboard Cart Here)

**

SPECTRUM NEEDS: NO PLACE FOR PLT IN JAPAN

Proponents of using Power Line Transmission or PLT technology have suffered a major setback. Telecommunications regulators in Japan have said NO to its implementation after tests show that the system could interfere with other spectrum users including ham radio. Jeramy Boot, G4NJH, has more:

--

The RSGB has learned from its contacts in Japan who have been working on problems of interference from Powerline Telecommunications Systems that, following extensive trials, the Ministry of Public Management, Home Affairs, Posts and Telecommunications has decided not to permit the roll-out of PLT systems operating in the range 2 to 30MHz in Japan. Japanese studies have shown that emissions from PLT are harmful to HF communications and all requests from PLT manufacturers to operate PLT systems have been refused. The RSGB has been told that the Japanese amateur society, JARL, has been actively working with the government, along with radio astronomers, broadcasters and others, to assess the impact of PLT systems on the radio spectrum. We understand that this decision has been given much publicity in the Japanese national press, which has highlighted concerns about interference to safety-of-life services.

--

What about Power Line Transmission systems being proposed elsewhere in the world? G4NJH says that in Europe, the Radio Society of Great Britain continues to press for tight limits on emissions from all wireline based telecommunications systems. Also that it is working with other High Frequency users to try to ensure that the spectrum remains uncontaminated by wideband noise. (GB2RS)

**

THE VE TESTING SYSTEM: NCVEC SAYS YES TO REMOTE TESTING

The National Conference of Volunteer Examiner Coordinators have endorsed experimental use of videoconferencing technology to conduct Amateur Radio testing in remote areas of Alaska. Newsline's Bruce Tennant, K6PZW reports:

--

An ARRL bulletin says that it all happened when the nations VEC's gathered with the FCC to discuss the all volunteer testing system and ways to inprove it. Meeting July 26th in Gettysburg, Pennsylvania, the National Conference of Volunteer Examiner Coordinators or NCVEC voted to back a one-year trial run to be conducted by the Anchorage Volunteer Examiner Coordinator in Alaska.

Jim Wiley, KL7CC, of the Anchorage group told his VEC colleagues that it's very expensive to provide Amateur Radio test sessions to the thousands of Alaska residents who live in remote areas. The vote followed discussion on whether having a VE team remotely monitor a test session while an unlicensed individual proctored the exams on site would comply with FCC Part 97 rules.

Section 97.509(c) of these rules says that three VE's must be present and observing the examinees during a test session. But Bill Cross, W3TN, of the FCC's Wireless Telecommunications Bureau, pointed out that the VEC and the VE's are responsible for the proper conduct of the exams. He also said that no rule changes appeared necessary because VEC's already have authority to determine the manner in which their VE teams conduct examination sessions. So the test of videoconferencing ham radio tests will go forward.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

The Anchorage VEC says that it will provide progress reports to the NCVEC on the videoconferencing experiment. (ARRL)

**

ENFORCEMENT: THOSE REPEATER WARS

Repeater wars continue among hams on both the east and west coasts. And the CQ Magazine website says that those involved are dragging the FCC into battles the agency would really rather the ham community settle on its own.

Two examples. In West Virginia, where an uncoordinated repeater was interfering with a coordinated repeater in Virginia, the FCC ordered the owners of the uncoordinated repeater last winter to resolve the problems. However, it appears that interference is continuing and the FCC is again looking to the owners of the West Virginia repeater to investigate and resolve the complaints.

In California, a strange one. Last March the FCC found no enforcement issues involving a repeater in Sonoma County following complaints from another repeater group. Now, users of the Sonoma repeater are complaining of interference from the repeater whose trustee originally complained to the Commission about their repeater. (CQ)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9SEH repeater serving Champaign Illinois.

(5 sec pause here)

**

ENFORCEMENT: FAX BROADCASTER FINED $5.4 MILLION FOR JUNK FAXES

The Federal Communications Commission issued a record fine of over five million dollars against a company for sending junk faxes to businesses and consumers. Amateur Radio Newsline's David Black, KB4KCH, at our South-East Bureau has the details.

--
The August 7th fine against fax.com of Aliso Viejo, California is the largest ever by the commission for violations of the Telephone Consumer Protection Act. It is also the first against a company known as a fax broadcaster.

According to an FCC release, fax.com was paid to send unsolicited advertisements and other messages on behalf of more than 100 businesses. And FCC Commissioner Kathleen Q. Abernathy says that despite repeated warnings from the commission and numerous consumer complaints, fax.com appears to have made no effort to mend its ways.

Commissioner Abernathy added that the company appears to have founded its business on the practice of sending unsolicited faxes in flagrant violation of that law. This has resulted in the fax.com being cited for close to 500 violations at about $11,000 per violation. Thats the maximum penalty and it adds up to $5.4 million due to Uncle Sam.

But a lawyer representing fax.com has another opinion. Attorney Mary Ann Wymore says that the company feels the rules on unsolicited advertising are an unconstitutional restriction of her clients freedom of speech. And Wymore indicates that fax.com is going to challenge it in the federal courts.

For the Amateur Radio Newsline, I',m David Black KB4KCH.

--

fax.com has been given only the customary 30 days to pay the fine or file an appeal. The FCC is also issuing citations to more than 100 businesses that used the services provided by fax.com. (Adapted from FCC release and published news reports)

**

ENFORCEMENT: DONT ADVERTISE BANNED GEAR ON THE WWW

The CQ website reports some unofficial advice from the FCC: If you're going to sell non FCC approved amateur and CB equipment, don't advertise it on the World Wide Web!

Case in point. A company in Wisconsin we have reported on before. Roper Electronics which was asked by the Commission back on June 18th to explain why it was alleged web advertising non-certified CB transceivers and HF linear amplifiers on its website. The company was also ordered to submit a list of all High Frequency transceivers and amplifiers sold within the US or offered for sale during 2002, along with the FCC certification number for each model.

The FCC's Riley Hollingsworth says that his office has received a answer to the inquiry from Randi Owen. Owen is the owner of Roper Electronics. Hollingsworth says that his office and the local FCC field office is reviewing Owen's reply. (CQ)

**

RADIO LAW: DIGITAL TUNERS TO BE REQUIRED FOR ALMOST ALL TV SETS

The FCC has decreed that nearly all television receivers made after July of 2007 must include the ability to receive and display digital transmissions. Digital tuners in some of the larger sets will be required by July 1, 2004. All new sets of 13" and larger must have digital receiving capability by July 1, 2007.

TV set manufacturers are opposed to the new law. They say that it will add at least $250 to the price of every receiver sold. Also, that there is not enough digital programming to watch.

The FCC has another view. It is convinced that forcing the public to buy sets equipped with digital tuners will help speed up the conversion to an all digital t-v broadcast system.

You can read the full details on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225221A1.doc (From FCC release)

PRESERVING THE PAST: HAM RADIO COMING TO THE USS HORNET

Tom Hale, KB6SSN, tells the Amateur Radio Newsline that the staff of the USS Hornet Museum in Alameda, California has agreed to a ham radio project. The managers of the Hornet will allow a group of Amateur Radio operators rebuild and restore the original radio systems aboard the ship.

This will be a multi-year project three phase plan that includes getting modern commercial ham gear up and running aboard the Hornet as soon as possible. The planners are looking to contact anyone who served aboard the USS Hornet. If you did or if you know someone who did please have them contact Tom Hale KB6SSN by e-mail to tom@halemail.com. (KB6SSN)

**

WITH THE HANDI HAMS: SUMMER RADIO CAMP IS FULL

The Handi Hams report that their Summer 2002 Minnesota Radio Camp session is full but the group will hold its Winter camp in Malibu, California from March 2 through 9, 2003. Those interested in attending the 2003 outing are requested

to e-mail hamradio@courage.org to request an application. Applications will be mailed out as soon as they are printed and available. (Handi Hams)

**

HAM RADIO IN THE MEDIA: MORE DONATIONS TO “THE HUMAN RACE”

Kenwood Corporation will be the supplier of hand held radios for the t-v show The Human Race. And the shows producer, Bill Desjardins, W1ZY, says that he is happy to have Kenwood on board:

--
W1ZY: “We are certainly thankful to Paul Middleton over at Kenwood for giving the go-ahead on this and we look forward to a close working relationship with Kenwood.”
--

Desjardins tells Amateur Radio Newsline that there was a specific reason that Kenwood was selected.

--
W1ZY: “We are going to go with Kenwood’s in the field. The racers and the production crews will be using D-7’s during the actual race. Now other companies make good radio’s and we looked at all of them. But Kenwood won out because it packs APRS tracking into a really rugged field package.”
--

Desjardins also says that another important item has just materialized. He says that VE7FM has donated a home-brew, handheld, two-band beam to The Human Race for use with the D-7 and VC-H1 recently supplied by Kenwood to track satellites and pursue I-S-S contacts. Desjardins adds that this particular donation brings more good karma to the project. (W1ZY)

More information on the TV show “The Human Race” is on the web at www.humanrace.fr.st.

**

HAM RADIO IN THE MEDIA: FREQUENCY -THE TV SHOW

New Line Cinema is considering spinning off the movie "Frequency" into a TV Series. “Frequency” is the film where the non-ham hero uses his dad’s old ham radio equipment to communicate with his now decease father.

The movie was a great public relations boon for Amateur Radio. If New Line Cinema proceeds, a t-v show could help put the words ‘ham radio’ in the mind of every man, woman and child in the U-S of A. (Via W6AQ from published reports)

CHANGING OF THE GUARD: ERNIE HUDSON KI8O - S.K.

The ham who headed up the Montgomery Ohio ARES operation has died. Ernest Hudson, KI8O, passed away on August 2nd following a long battle with Cancer.

Hudson was 69 and had served as Emergency Coordinator for Montgomery County for over 20 Years. His organization with over 530 ARES members was one of the best in the nation. Hudson was also on the State of Ohio Council of Amateur Radio for the Montgomery - Greene County Local Emergency Response Council. And in 2001, KI8O was named as recipient of the Dayton Amateur Radio Association’s Distinguished Service Award.

Funeral services for Hudson were held on Tuesday August 6,2002 at the Parkview Church of the Nazarene, in Kettering, Ohio. (W8ILC)

RADIO BUSINESS: NEW MILITARY COMM SYSTEM BEING DEVELOPED

The Boeing Co. has been named prime contractor for a new U.S. Army communication system. The Joint Tactical Radio System is expected to be the foundation for all future Department of Defense tactical radios. (Published news report)

**

HAM RADIO IN SPACE: N SYNC WITH THE ISS

Russia's space agency says that it might scrap plans for 'N Sync singer Lance Bass to join an October mission to the International Space Station. This is because the Russian’s say that he had failed to meet a payment deadline.

Bass, who is backed by a consortium of companies rounded up by a Hollywood producer, David Krieff, has signed a preliminary contract for the trip. But Bass, who is already training at Star City Cosmonaut Center near Moscow has yet to secure a final deal guaranteeing a seat aboard the Soyuz craft.

If he does go, don't hold your breath waiting for him to turn up on 2 meter FM. He will be doing a lot of commercial endorsement work. In fact, Bass's space suit will be emblazoned with the names of sponsors. These logos will be seen during the eight TV shows Bass expects to beam down from space. Bass is also expected to record audio tracks for a future 'N SYNC release. (Published news reports)

**

HAM RADIO IN SPACE: THE AMSAT GLOBAL SATELLITE NET

Internet technology is allowing worldwide access to a new AMSAT net for beginning satellite operators. The AMSAT Global Satellite Net was recently started by Neil Hays, W6FOG, and may be accessed on VHF or UHF through repeaters linked via the Internet using the IRLP Internet Radio Linking Project network.

For those without IRLP access, but with HF equipment, the net may also be found on 14.250 MHz on 20 meters, every Wednesday between 0200 and 0330 UTC. I-R-L-P access is via radio only, but activity may be monitored by anyone with a computer, sound card and Internet connection. For more information on I-R-L-P, go to www.irlp net. For details on the AMSAT Global Satellite Net, see www.w6fog.net (W6FOG, AMSAT)

**

RADIO IN SPACE: SATELLITE RADIO VS. WIRELESS

XM Satellite Radio Holdings and Sirius Satellite Radio are reportedly in talks with wireless companies to resolve a dispute over interference with wireless communications services. The two sides have been bickering over the satellite services using equipment to extend their digital radio signals to hard-to-reach areas like metropolitan areas where skyscrapers can block satellite beams. Wireless companies fear that these translators will interfere with some wireless communications services. (Published reports)

**

DX

In DX F6FYD and F2VX are in Baku, Azerbaijan, until the 23rd of August. F6FYD will operate as 4J0FR- while F2VX will use the club call 4K7W. They will be active on all bands CW and SSB. (GB2RS)

And SM0CMH is active on 10 to 80 meters, including the WARC bands, on CW as SV5/SM8C from Kalymnos Island. He will be there until the 30th of August. For both these operations please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: WATCHING TV OVER THE MOON

And finally this week, here is one of those rare stories where an individual has done something so outrageous as to earn a spot in the record books. It happened down-under as we hear from Q-News Graham Kemp, VK4BB:

--
Dr. Anthony Mann of the Physics department at the Western Australian University has created a "Receiving system" which allows him to tune in Television signals from the US.

Tony has been a DX, TV enthusiast for decades, using his scientific credentials to stretch the laws of physical limits in order to "See further and further, unaided by satellites or wire".
His latest accomplishment, apparently a first, is to work out the parameters for using the Moon as a satellite reflector for bouncing TV signals from the USA into VK6.

As regards Tony's gear, he uses an Icom R7000 receiver, a Jaycar 91 element UHF antenna fitted with GaAs-Fet 20db masthead amplifier.

So far there's nothing very special about that except that the antenna is mounted on a tripod 1.5 meters above ground with the ability to adjust both azimuth and elevation to track the Moon in his sky.

Fortunately a Moon setting in Oklahoma is well above the horizon in Perth WA.

The signal Tony receives is tiny, very tiny, and not enough to produce a picture he can watch or even sound he can listen to. At this stage, it's not about watching Buggs bunny cartoons, it's all a bit more scientific than that.

Knowing the transmitters frequency to within a few Hertz, yes that's right Hertz, is essential as what Tony is searching for is a "beat note" indication that a carrier signal is present on the Icom receiver.

By using web amateur "Moon bounce" web sites he was able to calculate the Doppler shift for a group of likely TV stations, and then got hold of a precise TV station's transmitting frequency down to the last two Hertz; ie: 501.248XXX, the X's being the Doppler shift migrated.

Results this year have included signals originating in Oklahoma and Indiana.

--

You can read more about Dr. Tony Mann’s television reception experiments at the cyberspace address that you will find in this at www.physics.uwa.edu.au/~agm/eme1.jp

One of the common SSB generating schemes for hams in the early days used a 9 Mc carrier oscillator/IF. Anything below that freq was inverted compared to those freqs above it. We hams are kinda slow to give up old habits :-)

Best best regards's (for example)
-Bill

In the early SSB rigs, the local oscillator was around 9 MHz
as I recall, so converting UP to 14 MHz gave USB and
converting DOWN to 7 MHz gave LSB.

Amateur Radio Newsline™ Report 1306 August 23rd, 2002

Amateur Radio Newsline report number 1306 with a release date of
Friday, August 23rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Europe prepares for another ham in space and a technology called AMBER Alert finds another kidnapped youngster. These stories and more are next on Amateur Radio Newsline report number 1306 coming your way right now.

(Billboard Cart Here)

**
HAM RADIO IN SPACE: BELGIUM TO LAUNCH HAM ASTRONAUT

Europe is about to launch another ham radio operator into space. He is from Belgium and the QSL cards are already being prepared as we hear from Jeramy Boot, G4NJH:

--
Belgium's second astronaut to go into space is a radio amateur. Frank De Winne, ON1DWN, will join the International Space Station at the end of October this year. The exact timing of the flight is not yet available.

Gaston Bertels, ON4WF, who is Chairman of ARISS-Europe, has organized an amateur radio contact with the Belgian air force Royal Technical School. Bertels says that there may be other opportunities for operators to make contact with the mission as well. A full color QSL will be available. QSL cards and listener reports should be sent either direct or via the bureau to ON7AQ.

Jeramy Boot, G4NJH.

--

More information will be made available as soon as a launch date is set. (GB2RS)

**

HAM RADIO IN SPACE: BASS TO FLY

Another flight being watched is a Russian re-supply mission this October. One that may carry a United States pop music star as the third space tourist to the ISS.

After weeks of squabbling, Russian authorities announced late last week that teen heart-throb Lance Bass of the boy-band 'N Sync will probably travel to the international space station after all. Bass still has not paid any of the

estimated $20 million for his flight but a spokesman for Russia’s RKK Energia has also confirmed that plans for Bass' seat is being held for him and launch preparations are moving forward.

If Bass makes the trip to the International Space Station, he will become the youngest person ever in space. This title has been held since 1961 by former Soviet Union cosmonaut German Titov who was only 25 when he made his first flight. Bass was born in 1979 and is currently 23.

At airtime, Bass’s sponsors have indicated that his every waking moment on orbit will be pre-planned. This could mean no ham radio using the ARISS Amateur Radio station on board the ISS. (ARNewsline™ from published reports)

**

EMERGING TECHNOLOGY: UPS NOW NEUTRAL ON RFID TAGS

United Parcel Service now says it's neutral on a SAVI Technology's proposal to permit higher duty cycles than current Part 15 rules permit for Radio Frequency or RF ID tags. These are tags used for tracking shipments and packages, among other applications. The ARRL has said that adopting SAVI's proposals would result in severe and harmful interference to Amateur Radio and has opposed the plan.

And the ARRL Letter now reports that UPS recently clarified its position in an ex parte filing to the FCC. In its statement, the shipper said that it takes no position on the rule changes proposed in the SAVI Petition because they will have virtually no impact on U-P-S's shipping operations. Also, that the requests are inconsistent with efforts to promote international standards for RF ID tags. The change in position is highly significant because United Parcel Service has an equity interest in SAVI through its UPS Strategic Enterprise Fund. (ARRL Letter)

**

EMERGING TECHNOLOGY: AMBER ALERT SAVES ANOTHER KIDNAPPED CHILD

Some hams in California are looking at ways to tie their repeaters in after the states new AMBER Alert system has helped to safely locate yet another kidnapped youngster. Nichole Timmons vanished from her bedroom in Riverside California on Monday night August 19th. She was found the following afternoon in rural Nevada based on tips called in by motorists who recognized the description of the girl, her suspected abductor and the truck they were in.

A description was flashed on electronic road signs across several South-Western states as part of a multi-state alert. At about 2:40 p.m. on August 20th, Nevada police spotted the girl's former baby-sitter, Glen Park, and Nichole driving through the Walker River Indian Reservation north of Reno. A tribal police officer stopped the pair and Park was taken into custody. Riverside Police Chief Russ Leach told reporters that the arrest came about because Nevada state police used their AMBER Alert system and received a tip from a passing motorist.

As previously reported, the AMBER Alert system is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996. It uses a combination of two-way radio, telephones, fax and data communications to quickly spread word of a child abduction. In theory it could also be interfaced to ham radio repeaters and packet networking systems. More important, with Nichole Timmons return, the AMBER Alert system is now credited with safely recovering at least eighteen children since 1997. (ARNewsline from news reports)

EMERGENCY COMMS: REPORT SAYS NYC EMERGENCY RADIO SYSTEM FLAWED ON 911

Poor radio systems with no inter-operability contributed to the casualty count in New York City last September 11th. This as a report on the aftermath of the terrorist attack targets the city’s emergency radio system as not being adequate for the task that day. Amateur Radio Newsline’s Bruce Tennant, K6PZW, tells us what that report had to say:

--
The report was prepared by high ranking New York City department officials aided by the management consultant McKinsey & Co.. It found that the rescue effort while highly, successful was hurt by a failure of city departments to work together, poor organization and a faulty radio communications system.

The radio system caught a lot of criticism. It was singled out as being the biggest problem after firefighters had entered the twin towers.

The report found that once inside, radio communications problems left many commanders and firefighters unable to communicate with each other. To make matters worse, the fire department's radios were incompatible with the police radio system and vice-versa. In other words, no inter-operability between police and fire and no direct radio communications between the two agencies.

New York City Mayor Michael Bloomberg has assured the city that the fire department's radios work properly in the future. This, regardless of the cost of improving it. Police are also considering opening the department’s citywide system of repeaters to the fire department in order to help solve the communication problem for future joint efforts.

Even with the radio problems an estimated 25,000 people were evacuated from the twin towers that day. Mayor Bloomberg calls it the most successful urban emergency evacuation in modern history.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

As widely reported, ham radio operators were among the first on the scene in lower Manhattan. They operated using an array of their own equipment and networks providing communications to all who need it. Hams and their gear performed almost flawlessly in the hours, days and weeks following the September 11th terrorist attacks. (ARNewsline™ from published news reports)

**

ENFORCEMENT: TAKE THAT LINK OFF THE AIR

The FCC has ordered a Los Angeles area ham to get coordinated or remove a repeater link from the air. Daryl Duckworth of the agency's Consumer and Governmental Affairs Bureau explains the action taken:

--
Duckworth: "We issued a letter to Leobardo Coronado, KC6PXL, of Sun Valley California, ordering that on receipt of this letter to KC6PXL, that an uncoordinated repeater link must be shut down until either coordination is obtained or a detailed plan is submitted that will prevent interference to a coordinated repeater operating on the link frequency."

--

Coronado was warned that his failure to shut down the uncoordinated link will result in enforcement action that could include license revocation and a monetary forfeiture of up to $7,500. (FCC, RAIN)

**

WITH THE FCC: FCC UNIVERSITY" LAUNCHED - CONTINUING LEARNING FOR THE FCC STAFF

The Federal Communications Commission has launched what it calls FCC University. This is a new program to ensure that FCC staff members have the cutting edge knowledge and skills to respond to the challenges of the communications field in the 21st century.

According to the CGC Communicator, FCC employees can choose from a vast array of courses on generally applicable subjects. There are also sections of FCC University that are specifically geared to meet the educational needs of engineers, economists and
lawyers working for the agency. Complete information on FCC University is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225430A1.doc (CGC Communicator, FCC)

**

CONVENTIONS & HAMFESTS: BIG BUSINESS IN HUNTSVILLE

In news from the ham radio business world, last weekends Huntsville Hamfest in Alabama may have signaled a turn-around for those who make their living selling ham radio gear. And that's good news for more than just Amateur Radio.
David Black, KB4KCH, reports:

--
While a great deal of the world's Amateur Radio equipment is manufactured in Pacific Rim countries, most of it is sold right here in the United States. The majority of sales are by family-run businesses. And as the U-S economy sagged so did ham gear sales. Slow sales meant the end for some businesses. Others struggled to survive. Now, there appears to be a turnaround with word of a fantastic sales weekend at the Huntsville Hamfest in Alabama. How good was it? Chip Margelli, K7JA sells equipment for Vertex-Standard:

--
Margelli: "Well, it has been a great show this weekend. The crowd was very active, especially Saturday morning and early afternoon. Sunday has been busier than normal and we have had great weather and a good turnout. A lot of boxes have been going out there door and there has been a lot of interest in the new products."
--

Good sales aren't the only encouraging news at Huntsville. Event organizers are thrilled at other figures—the number of people attending. While the exact gate figure was not yet available, Hamfest General Chairman Scotty Neustadter, W4WW says it could be a near record year.

--
Neustadter: "I was a little bit hesitant to think that myself. I try to error on the side of caution. But I was very, very pleased and I am thinking that we are definitely up from last year and the year before. The attendance would be a record for a Huntsville Hamfest with the exception of the year that we were the ARRL National."
--

Neustadter's enthusiasm is echoed by Todd Mowery. He's with ATOC, the company distributing Alinco ham gear. Mowery says Saturday was especially good.

--
Mowery: "Oh, I thought it was a very good weekend. Saturday was very crowded. Very impressive."

"I enjoyed it a lot. The booth was busy. We have quite a few new products over the last year that we put out -- mostly in the HT realm. And they have done really well for us. And the crowd that showed up yesterday enjoyed seeing those new radios."
--

The most succinct evaluation of Huntsville probably comes from Gary Green, N4CJX, of Ten-Tech, who needs few words to describe how he feels about this Hamfest:

--
Green: "We love Huntsville."
--

Green says Ten-Tec will be back next year. Just about everyone else is saying they will, too.

From the Amateur Radio Newsline Southeast Bureau in Birmingam, I'm David Black, KB4KCH.

--

One more word about this years Huntsville Hamfest. It concerns the D-X Banquet. Bill Hall, W4GBF, was one of the banquet planners. He tells Amateur Radio Newsline that for the first time in its history the banquet had more people want to attend than there were seats available. Hall could not talk with us very long. He was out scouting up extra seating. More on Huntsville a bit later in this weeks newscast. (ARNewsline™)

**

CONVENTIONS & HAMFESTS: ARRL IN SOCAL

Successful ham radio conventions are not limited to Alabama. Information out of California indicate that the Southwestern Division Convention was also a success. Reports from San Diego say that there were plenty of vendors doing a brisk business and all of the forums were jammed packed. We spoke with Gordon West who was on the roof doing antenna work. He was one of the presenters at the convention and Gordo says it was two thumbs up show:

--
West: "I'm up on the roof doing ATV antenna work and ATV as well as emergency preparedness was one of the many topics that we talked about at the Southwestern Division Concention. And boy-oh-boy was it busy. The aisles were packed on Saturday morning all of the way through Saturday evening and the outside exhibits of the emergency communications vehicles were well attended"
--

Highlights included the FCC's Riley Hollingswoth, K4ZDH, hosting a two-hour enforcement session and Bob Heil, K9EID, presenting his famed audio conference. One source tells Amateur Radio Newsline that there were about 1500 people who made the trek to San Diego for this show. (ARNewsline™)

YOUTH IN HAM RADIO: 2002 YHOTY AWARD PRESENTED TO KB3GWY

Saturday August 17th was a special day for a Reading Pennsylvania teen. That's when seventeen year old Josh Abramowicz, KB3GWY, became the 2002 Young Ham of the Year. Amateur Radio Newsline's Don Wilbanks, KC5MFA, was at the Huntsville Hamfest where the presentation was made:

--

Abramowicz: “I share the enthusiasm of my colleagues at home when I say that ham radio extends many, many opportunities to the youth of America. There are many young people in our country that take an interest in our great hobby. Unfortunately, there are those who have not heard or seen our hobby and I believe that it is a great thing to spread our hobby as far, as wide and as much as we can.”
--

That’s 17 year old Josh Abramowicz, KB3GWY, as he accepted the 2002 Amateur Radio Newsline Young Ham of the Year Award. Abramowicz was honored for his work in promoting Amateur Radio in and through the Boy Scouts of America. He says that its important to let other kids know about ham radio.

--
Abramowicz: “The youth of America are interested, but in to many cases they never see any of the action that our hobby provides. Therefore, I think it is our job -- young and old -- to do our best to pass our hobby on to the next generation and this can be done in a lot of ways.”
--

Abramowicz went on to detail how this can happen:

--
Abramowicz: “I've done it through Venture Crews. There are also many other ways. There is youth groups, families promoting Amateur Radio to the youth in your neighborhood. They are the future of Amateur Radio. Much like a lot of our radios and a lot of our equipment, all it needs is one spark.”
--

And after receiving his gifts from Amateur Radio Newsline, Vertex-Standard and CQ Magazine, KB3GWY turned the tables with a special gift of his own:

--
Abramowicz: “I have here a couple of patches from the K2BSA station from the National Jamboree. These are limited edition patches with “Radio Scouting” written on it. There is K2BSA and it has the world symbol for Scouting. First of all I would like to present one to Mr. Bill Pasternak for his kind generosity. I’d like to give one to Chip from Yaesu for his kind generosity also the gentleman from CQ.”
--

Josh then donated his major gift from Vertex Standard -- a Yaesu FT-817 to the Boy Scout Venture Crew he is involved with:

--
Abramowicz: “I just want to say that the equipment will be going to the Venture Crew and the future efforts of our Venture Crew working with youth and getting them on the air. So thank you. (applause)
--

And Amateur Radio thanks Josh Abramowicz, KB3GWY, for being another excellent example of ham radio youth at its very best.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

INTERNATIONAL-UK: BIG UK 5MHZ EXPERIMENT FOLLOW-UP

The British 5 MHz propagation study using Amateur Radio is picking up speed. This as an increasing number of U-K hams apply for a Notice of Variation or N-O-V to let them take part. Once again, from Nottingham in the U-K here is Jeramy Boot, G4NJH:

--
During the first few days of the 'Fivemegs Experiment' a large number of NoV holders have made contacts with each other across the UK. Radio amateurs in other countries are showing great interest in this experiment, but we must make it absolutely clear that this has been authorized in order that we may carry out propagation investigations, antenna experiments and some emergency radio training within the UK. At the present time a very small number of US radio amateurs are authorized to conduct similar experiments under the group call sign WA2XSY. We know of no other amateur stations outside the UK who have any authority to call in. Jeramy Boot, G4NJH.

--

More on the British 5 MHz experiment in future Amateur Radio Newsline reports. (GB2RS)

**

INTERNATIONAL - CANADA: NEW VE5 SM

From our friends up North comes word that Bruce Donovan, V-E-5-N-D was recently re-elected Radio Amateurs of Canada Section Manager in the Saskatchewan Section. This, for a two-year term that will begin on November 1st. Donovan ran unopposed eliminating the need for a balloted election. (RAC)

**
INTERNATIONAL - JAPAN: HAM-FAIR TOKYO

The 24th and 25th of August, saw one of the world's largest ham radio shows takes place in Japan. It’s the Amateur Radio Festival better known as the Ham Fair and was slated for the giant Tokyo Exhibition Center. Last year Ham Fair attracted over 35,000 visitors. (JARL)

**

DX

In DX, K3TKJ is active on 40 to 6 meters as C6ALW from Andros Island in the Bahamas. He is there until the 18th of September and activity is mainly on SSB, but with some CW on 6 meters. (GB2RS)

HF98JP is a special event call sign activated by SP9HWN through the 31st of August to celebrate the visit of Pope John Paul the Second to Poland. The station is active on 80 to 6 metros CW, SSB, RTTY and PSK31. QSL as directed on the air. (Modern DX)

**

THAT FINAL ITEM: LICENSE DRIVE

And finally the story of a license drive. Not a campaign to get people their ham license. Rather the tale of one determined applicant who could not wait. It took place down-under as we hear from Q-News Graham Kemp, VK4BB:

--

Here's an amazing story of amateur enthusiasm that must be one for the record books. After many years of trying, Roscoe VK3TPJ was overjoyed on receiving news of his pass in CW. After all Roscoe has had a well-equipped HF station for years but hasn't been able to use it without supervision.

So enthusiastic was our Roscoe that waiting for the call sign in the mail was not for him. So he immediately jumped in his Falcon and drove 1000K up to Sydney to visit the ACA in person. He arrived at around 5am and waited a few hours for the office to open.

When it did, he was told he needed a passport photo to stick onto his new certificate. Undaunted, he went downstairs to an instant photo machine at Wynyard Station. Five minutes later he was back, photo in hand. Another five minutes elapsed and Roscoe was VK3KRH - authorized to operate on all amateur bands. The task achieved, he got in his car and drove straight home again - after just four hours in Sydney and a round trip of approximately 2000 kilometers!

--

Congratulations to the new VK3KRH. You can catch up with him on 160 meter AM during the morning hours. (Q-News)

The SSB cards will probably follow later as they went to a completely
different qsl manager.

However, it is not uncommon for YT1AD to end up doing them too later ...

Jim...is the radio control file user editable in Logger? My experience is
that 'timing' may need tuning (additional delays), which of course are
undocumented by the mfgrs.

Source record: 12328

Hi!
I had a great QSO with PY2KFQ on 10m earlier this evening, and since
that was my second DX QSO every, I'm still a little lost on sending out
and getting back a QSL card. It looks like Brazil's got a bureau, so
the question is do I send my card there directly, via the ARRL outgoing
bureau, with or without SASE, greenstamp(s), IRC, etc.
I read the previous thread about QSL'ing, but I think I missed the
part about bureaus.

Thanks in advance and 73!

Contacted SN8OOR in Poland on 8-25-02 5:15Z. Can't find a QSL route for
him. Have looked in all the typical places. QRZ, Buck, GoList..etc...
Should I just send via Bureau?? Any help would be appreciated.

Thanks,

Matt

Hi Pat,

Bureaus are great for bulk sending and receiving at very little cost, but at a huge price of time. Typical turn-around time for a buereau card is around a year--or longer! I've sent hundreds of cards through the bureau in the last year and I've gotten about 17 back to date. Many people report card turnarounds of 2 or 3 years!

If I were you, I'd send the card directly to the station. Enclose a self-addressed return envelope and a Green Stamp to cover the cost of postage (or put sufficient mint stamps from Brazil on your return envelope to get a letter back to the US--you can get them from Bill Plum's DX Supplies among other sources).

I took a quick look, however, and I don't see any address for PY2KFQ in any of the usual sources of QSL info. He doesn't seem to be in QRZ, Buckmaster, the Go List, the Brazilian Call Book or have a manager. If you have an address, send it to that address and hope for the best. If you can't find the address, send it via the Bureau (you need to be an ARRL member if you're an American Ham) and also hope for the best :-/

Also, just FYI, I've sent about 7 or 8 direct QSL requests to Brazil and I've only gotten 2 cards back--one of which had my call wrong! Brazil seems to be one country that is a bear to get a card out of. Despite 15 requests, I've also never gotten one out of Argentina or Paraguay at all.

Good Luck!!

I worked him in March and again twice in May. According to the
operator, QSL is via SP9ERV.

ANTONI CZECH
GORNICZA 36/6,
44307 WODZISLAW
POLAND

I also noticed you had a typo in your outgoing message. His call is
SN800R, not SN8OOR (two zeroes, not two letter o's).

Using the correct call, it came right up in QRZ managers, Buck, etc.

2760. Azerbaijan ? Is there someone out there ?

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-27 18:24:32 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0208271024.45ffa83a@posting.google.com>
Source record: 12335

Blooming Azerbaijan !

There are few months now I'm trying to "catch" an OM/YL from 4J/4K to get some DXCC awards. Problem I can't get it !

So I would like to know if you made QSO in the HF bands with a 4K ? If you did, whith what callsign were you in QSO and on what QRG (if you can, in Khz) ?

Bec' I observe that hams regularly come back to the QRG they used. This is so true that 22 years later I heard again (my logbook is updated !) YL SP5GMM at a few Khz from her previous QRG - see her first QSL on http://www.astrosurf.com/lombry/qsl-confirmed.htm. Incredible !

Thanks

73

Worked 4J3M in February 13th, 2002 at 0325Z, 14218 kHz. QSL sent Feb. 14th, received his QSL on April 04. QSL Mgr was 4Z5LO.

That was a lucky catch for me, and the most astounding part was that there was no pileup--he was just CQing over and over with almost nobody was coming back to him (even after I spotted him on the cluster). He was last spotted 18 August on 17m. Judging by the cluster spots, he uses mostly 12,15,17 & 20 metres SSB, and more often between 1400Z and 1600Z, and again 0200-0400Z. He's also been spotted on 10M CW a few times as well.

Good luck!!

2765. JCC, JCG awards

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-28 20:41:50 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0208281241.7b9b1c51@posting.google.com>
Source record: 12341

HI,

I have probably enough JA station to get some japanese awards, among them the famous JCC, JCG, HAJ, etc.
But I have a problem. The few japanese I contacted told me there was no callbook written in English listing japanese hams accessible on the Internet. Their callbook is written in japanese only ! There is also very few JA listed in qrz.com or buckmaster.com.

So my question is : how can I link my JA callsigns to japanese prefecture and guns ?
Do you know an URL listing a near-complete japanese callbook in English or a file listing most of them I coulkd download ?

Otherwise how do you proceed to link the callsign to prefectures/guns ?
Thanks.

OK, OK OM's
I have to recognize there are some 4K on the air nowadays and even
this afternoon 28 aug ! But I haven't my RTX near me...
So this is probably me who is not tuned on the good QRG !
Will check this more carefully ;-)

Thanks.

Source record: 12344

Thierry:

Your information is exactly correct. JAs do not use the western alphabet; also, the hardcopy JA callbooks list only the members of the JARL ... something like 150,000 members versus probably 500,000 unique, individual licensees (some have multiple station licenses).

BTW, the JCC listing is for Cities while the JCG listing is for what can best be described as unincorporated "Counties" ("gun"). Prefectures are a whole different level. The "prefecture" is most closely related to "states" in the USA.

FWIW, researching, organizing and applying for the awards is a very manual, time-consuming effort. I have had to go through literally thousands of JA QSL cards to input the JCC or JCG data into an MS Excel spreadsheet .... I don't know why I waste the time! :-)

By separate email, I have sent to you two ASCII text files which should contain enough information for you to manually identify the appropriate JCC or JCG numbers to specific addresses on QSLs you may have in-hand. I received the files from a chum of mine .. his source is unknown to me.

Here is a sample of the data:

JCC data:
```
#### Prefecture City
-------------------------------------
0101 Hokkaido Sapporo
0102 Hokkaido Ashikawa
0103 Hokkaido Otaru
0104 Hokkaido Hakodate
0105 Hokkaido Muroran
0106 Hokkaido Kushiro
0107 Hokkaido Obihiro
0108 Hokkaido Kitami
0109 Hokkaido Yubari
0110 Hokkaido Iwamizawa
```

JCG data:
```
#### Prefecture Gun (county)
----------------------------------------
01001 Hokkaido Akan
01002 Hokkaido Ashoro
```

01003 Hokkaido Atsukeshi
01004 Hokkaido Atsuta
01005 Hokkaido Abashiri
01006 Hokkaido Abuta (Shiribeshi)
01007 Hokkaido Abuta (Iburi)
01008 Hokkaido Ishikari
01009 Hokkaido Isoya
01010 Hokkaido Iwanai

Good luck and 73 to you,

Sandy W7BX@arrl.net

Hi,

In fact I have such lists (see on my website,
http://www.astrosurf.com/lombry/qsl-download.htm)

What I need is the equivalent of the JA callbook to know for example
in what prefecture or gun is located JA1ABC.
And its seems such information is not available in english.

So the only way to get it is like you are doing, waiting the QSL of
all JA you contacted... So a long run chasing...
It's a pity to have to wait so long (but I think DXCC or 5BDXCC works
the same way too) :-((

Thanks.

2771. For Sale: Yaesu FT-100 with extras $600

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-29 14:04:30 UTC
From: Jeff Purtle <jpurtle@earthlink.net>
Message-ID: <B9939F6F.502%jpurtle@earthlink.net>
Source record: 12347
Cross-posted to: alt.ham-radio.dxing,alt.ham-radio.fm,alt.ham-radio.hf,alt.ham-radio.ssb,alt.ham-radio.vhf-uhf,alt.ham-radio.mobile,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

For Sale:
Yaesu FT-100 in perfect condition without a scratch or mark.
This opperates all modes (SSB, FM, CW, RTTY, and AM) on HF (160-10M), 6 meters, 2 meters, and 440 Mhz and receives continuous coverage from 100 khz to 961 Mhz (cell band blocked). It is also capable of transmit in other bands making it useful for MARS and other uses. This will proove useful if the new bands are really added.
Never used mobile.
CTCSS Tone squelch board (FTS-27) was purchased and installed.
Also included is the Mobile Remote Head Bracket (MMB-62), the Quick-Release Mobile Bracket (MMB-67), Seperation Kit (YSK-100), and the original handheld DTMF mic (MH-36B).
The manual, schematics, original box and all original literature are all like new too.

The price is $600 plus shipping costs.
I live in Greenville, SC zip code 29615 so that you may figure the shipping.

Hi,

To what list refer islands CI-xxx like CI-074 used by 9A3JB/P (mid of
adriatic sea)
I do not find this reference is IOTA or IIA lists.

Do you have a table listing these "CI-" references ?

Thanks

2774. N2SS RUNS FOR DIRECTOR, ATLANTIC DIVISION

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-29 19:13:05 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3D6E7241.13816C1E@erols.com>
Source record: 12350

Well known DXer and member of the DXCC Advisory Committee, Tony Gargano, N2SS, is running against the incumbent, for Director of the ARRL Atlantic Division. Over the years, I have had several exchanges with Tony concerning DX matters. He has been responsive, level headed and always presented a strong defense of his position. I have no reason to believe he will not act in the same manner as Director, Atlantic Division.

If your an ARRL member and reside in the Atlantic Division, you will be receiving a voting ballot. May I recommend that you check off the box marked for N2SS. He has my vote and confidence.

Murray Green, K3BEQ

Those are from the Islands of Croatia Award list:
http://www.inet.hr/9a6aa/IOCA_IOTA_LH/list.htm

The Java script on the pages seems to have some problems working in
Netscape (at least in my browser), so use IE if you have it.

Hi,
R1ANZ/A is the most active nowadays. He is regularly on mondays, on
21.275 Mhz from 17z on the WABA net. Readable in Europe with a simple
sloper 15m.

Check several possible callsigns on my website where I have listed
over 110 hams working in Antarctica for several years :
http://www.astrosurf.com/lombry/qsl-download.htm (search WABA.xls)

Hi,
Mmmm... something related to his DX-peditions ?
Try QSL.com... http://www.qsl.net/5x1z/
The sole and only one email I know is : persson@wfp.org

There are several different US hams in Antarctica from several different bases.
Ones that I remember is KC4AAC and KC4USV.
They are on many nights on 14.243. Anywhere from 0100 to as late as 0700, even when the band sounds dead. Also check around that freq as well.
I heard there was an Antarctic net on 21.275 at 1700 GMT most days. I have never listened for them.

ALAND ISLANDS, OH0
Ari,OH0/OH5DX, will be on the air in CW/SSB from Aug 29-31.

ARGENTINA, LU
Argentinian radio amateurs tried something totally different and
con-
structed a buoy which transmits interactively on 14026 and
28192.5 kHz.
It will be exposed by the ship "Balizador" and will then float
with the
current of the sea. It answers any calls with a position and
weather
report like that: "vvv LU0ARC/mm LU0ARC/mm 21/08/02 1537 UTC
35.08 S
57.02 W 13.7 V LIGHT 098 TC 28.0 TW 20". Carlos,LU5DZB, asks for
any
reception reports via e-mail to cuchin@speedy.com.ar.

AUSTRALIA, VK
Trevor,VK7TS/4, is working from Magnetic Island (OC-171) mainly
in SSB
on 40-10m until Sep 6. QSL via homecall.

BENIN, TY
Victorin,TY2SV, hits the airwaves with weak signals from
Kotopounga.
QSL via F5CWU.

BORNHOLM ISLAND, OZ, EU-030
Ela,DL3YMK, and Torsten,DH3YMG, will spend their holidays on
Bornholm

from Sep 5-21. They intend to work on 80m-23cm, on HF look for them at
..260 kHz. During the evening hours they plan to activate 2m/70cm/23cm.
More information is available on the website:
http://dh3ymg.dyndns.org.

FRENCH POLYNESIA, FO
Jean-Luc,F5AEP, will stay in Papeete for the next two years starting on
Sep 1. His callsign has not been anounced yet. During these two years
he also plans to visit several other islands like the Marquesas or
Gambier Island.

GAMBIA, C5
C56/G4IRN will be on the air mainly in CW on 10-80m from Sep 6-13.
QSL via G4IRN.

GOTLAND ISLAND, SM, EU-020
Hardy,SM1/DL3KWF, and Rosel,SM1/DL3KWF, will be QRV in CW during the
morning and evening hours from Sep 2-13. QSL via bureau. QSL requests
can be sent also via e-mail to dl3kwf@darc.de or dl3kwr@darc.de.

GREECE, SV
J45DIG, the Greek DIG clubstation, will be activated by several operators between Sep 4 and Oct 16.
Hannelore,DH5JR, and Eberhard,DJ8OT, will operate mainly on 14277 kHz
from Sep 4-18. After that Alfons,DJ8VC, Ulla,DF6QP, and Walter,DL8JS,
will insert a CW shift between Sep 18 and Oct 2. They will be replaced
by DL3KWD from Oct 2-16. QSL via DJ8OT, via bureau ok.

KOSA TUZLA ISLAND, UR, EU-180
Alex,UR4LUG, Oleg,UR3IFD, Leo,UT2II, and Vit,UX7IM, will sign EM5UIA
in SSB/CW/RTTY on 20-10m from Sep 5-10. QSL via UR4LUG, bureau ok.

KUCHINOSHIMA ISLAND, JA6, AS-049
JO1EPY/6 will be on the air again in SSB/CW on 6-40m (also WARC) from
Sep 5-8. QSL via JO1EPY, bureau ok.

MEXICO, XE
To mark the 70th anniversary of the membership of their club FMRE

in
the IARU Mexican radio amateurs are allowed to use their prefix
6J
during DX QSOs. The special event station 6F1LM will be on the
air as
well celebrating the same event.

NORTHERN MARIANAS, KH0
The call KH0R from Saipan will be activated by JE6DND from Sep
6-10.
QSL via JE6DND.

PHILIPPINES, DU
During September Ken,G3OCA, plans to visit some islands in the
groups
Calamian (OC-090), Cuyo (OC-120) and Sarangani (OC-175). He will
be
QRV in CW and SSB.

SARDINIA, IS0
Tom,DL2RMC, and Hartmut,DM5TI, will be QRV in
CW/SSB/RTTY/SSTV/PSK31 on
160-2m from Sep 4-13. QSLs via homecalls.

SOUTH SHETLAND ISLANDS, VP8/ss
Oleg,R1ANF, is momentarily active from the Chinese base "Great
Wall".
Usually he shows up in the Antarctica Net on 21275 kHz every
monday
at 1700 UTC. QSL via RK1PWA.

WAKE ISLANDS, KH9, OC-053
Jake,N6XIV/KH9, is on the island for one week now and plans to
stay
there for another six weeks. He hits the airwaves mostly between
0700
and 0900 UTC. QSL via K2FF.

WAKE ISLANDS

The Wake Islands are situated at 19 deg 20'North and 165 deg 35'West
in the
Central Pacific about 3700 km west of Hawaii and 2500 km northeast of
Guam.
The archipelago is an atoll about 7.5 sq km in size and consists of
the main
island Wake, Wilkes Island and Peale Island. All islands are very flat
and
have extensive sandy beaches. The lagoon is closed by reefs.

In the past the atoll was named Halcyon, the Japanese call it
Ontorishima.

Today it is administrated by the US Air Force. The USAF built two
airports
and bridges to connect the islands. The military airport is situated
on
Wake and Peale Island was used for stop overs by the civil aviation in
former times. Nowadays there are no more scheduled flight services to
Wake.

The climate is very warm and dry throughout the year. The water for
the 400
inhabitants is obtained from a seawater desalination plant. On the
island
there are also a weather station and an oceanographic research base.
Furthermore Wake Island is also an important junction of submarine
cables.

Amateur radio: prefix KH9, own DXCC entity. WAZ zone 31, ITU zone 65,
IOTA: OC-053. Wake Island is rank 9 on Germany's Most Wanted DXCC
List,
Time difference: UTC +10h.

2792. GOWIN, Golist for Windows

Newsgroup: rec.radio.amateur.dx
Date: 2002-08-31 16:55:52 UTC
From: John <K1XN@arrl.net>
Message-ID: <Pu6c9.9729$vY2.175552@e3500-atl2.usenetserver.com>
Source record: 12268

G O W I N
Golist for Windows
A Great DX Tool just got BETTER !
The GOWIN program package contains the 32 bit Windows program
And these feature added products at NO ADDITIONAL COST.

52 weeks of Golist database updates.....a $36.00 value
52 weeks of DX ALERT.....a $25.00 value
52 weeks of Unlimited web look ups.....a $25.00 value
GoSearch program for web look ups.....a $25.00 value

GOWIN is a small, simple and very FAST Windows search program that
Goes to another level. The program interfaces with RAC, QRZ or
BUCKMASTER call books to provide the address of the Qsl Manager for
The DX station you are looking up. You can save this address information
to a Text file by using the OUTPUT button and then use this Information
with your favorite label program. GOWIN also is INTERNET interactive
with links provided for PathFinder, Greyline, DX Alert, IARU Qsl Bureaus,
GoSearch and 425 DX News.

Read the review in the SEPTEMBER Issue of QST...PAGE 52

The same Golist database files that power the GOWIN program also
provide Qsl information for these top performing Logging programs.

WIN-EQF, DX4WIN. PathFinder, DXBase, Log Windows, DX Telnet, CommCat,
LogPlus,
Logger32, SwissLog, WinLog32, TRX-Manager, DXKeeper, PathFinder

Some of these programs already have The Golist interface released, the
others
will be releasing it in their next Product update. Other developers are
planning
to support Golist in their upcoming products and services.

GOWIN is now available by email or CD-Rom
for a Limited time for $49.95. CD shipping add $5.00

Order Online at; http://golist.net/tord.cfm
or orders@golist.net

2793. QSL route for TT8JE?

Newsgroup: rec.radio.amateur.dx

I worked TT8JE on RTTY back in August of 2001, and my notes indicate F6FNU is the QSL manager. But, email sent to is email address listed on QRZ.COM come back as undeliverable. I do not have Chad confirmed for DXCC... so I really need to track this one down.

So - does anybody know the current manager for TT8JE?

If it's still F6FNU, does anyone have an email or postal address?

Thanks in advance for any help,

-larry

HAM RADIO IN ACTION: SUMMIT IN SOUTH AFRICA

Ham radio has played a vital role in a World Summit for Sustainable Development held in South Africa. It began on Monday August 26th. Just before the opening gavel fell Hans van de Groenendaal, ZS6AKV, filed this report from Johannesburg:

--
"Radio amateurs will be providing communications assistance at three main operational centers. Members of the South African Radio League's emergency communications arm Hamnet will set up facilities alongside the National Defense Force and the South African Police Services. They will be operating at the main convention center, at Campton Park near Johannesburg International Airport and in Pretoria near the Woodcliff airbase.

Radio amateurs will be using the extensive repeater network in the city as well as H.F.. ZS6BUU, the National Director for the South Africa Radio League's Hamnet has more details:

--
ZS6BUU: "There will also be at least two mobile stations fully equipped to be available should the necessity arise. More vehicles can be called upon if needed.

One vehicle will be on stand-by should we need communications from Lancerial Airport. Now, Lancerial is an alternative airport should Woodcliff Airbase become clogged up with aircraft coming in from al over the world.

Hamnet is required to render emergency communications in association with the SANDF -- that's the defense force as well as our local

police. Hamnet regards this as a good exercise to test our preparedness and how we will be able to handle any emergency -- if and when one should come up."
--

It goes without saying that many other radio amateurs will be available should the need arise.

I'm Hans van de Groenendaal, ZS6AKV, reporting from Johannesburg.

--

The 10-day summit is being billed as the largest in U.N. history. It has been nicknamed Rio+10 because it marks the 10th anniversary of the landmark 1992 Earth Summit in Rio de Janeiro.

**

RESCUE RADIO: MICHIGAN HAMS HUNT FOR MISSING KIDS

They did not plan to get involved but a group of Michigan hams swung into action after a policeman in the town of Grand Haven knocked on the door of Andrew Young, N8ARY. The officer was going door to door looking for two missing area youngsters. On learning of the situation, Young decided to see what he could do to help:

--
Young: "I called a friend of mine who is also an Amateur Radio person because he had a park across from his house where kids generally play. I asked him to keep an eye open for the two children. A few minutes later he called someone else on the repeater and asked them to do the same thing and a few guys heard it and just kind of assembled as a loose knit net."
--

The person that Young called was Donald Smith, N8HCS, also of Grand Haven. He enlisted Smith to keep his eyes open for the two young girls. N8HCS assisted by David Cross, N3WJF, then called up an informal net that grew in size to about a dozen area hams. Most of the action was in the search:

--
Young: "We sort of just stayed out on the street and interacted with people and reported anything we heard back to the net control."
--

As the informal net grew into a formal operation, John Sundstrom, N8YQD was dispatched to be at the girls parents home. His job was to maintain contact after the net turned into a formal search. Coordination and central dispatch where in the hands of Don Meyer, KB8ODB.

The good news came when the girls were located by the police about two hours after the start of the net. This, thanks to a report from

a neighbor who saw the girls and called in.

Young says that with all of the recent abductions in the news, it is nice to see a community mobilize like this to find the missing children. Even better: In this case the search was a complete success. (ARNewsline™)

**

EMERGENCY COMMS: GRANT AIDED ARRL TRAINING TO BEGIN

Word from the American Radio Relay League, that its Amateur Radio Emergency Communications Training Courses supported by a $181,900 federal Homeland Security grant will begin within a few weeks. As previously reported from an ARRL bulletin the League was among several dozen nonprofit organizations designated to receive some $10.3 million in federal money to boost homeland defense volunteer programs. During its first year, the grant will reimburse the cost of Level I ARRL Amateur Radio Emergency Communications Course training for up to 1700 volunteers. More information is on the web at www.arrl.org. (ARRL)

**

RADIO RULES: VANITY FEE GOES UP SEPTEMBER 9TH

A new and slightly higher fee for vanity call sign applications will go into effect on September 9th. According to the FCC, applications received on or after that date will be subject to a $14.50 fee for a full ten year license term. (FCC, RAIN)

**

ENFORCEMENT: FCC WEIGHS INTO REPEATER FRAY

The FCC is weighing in on an ongoing repeater versus repeater dispute in Arkansas. The Agency's Daryl Duckworth, NN0W, explains:

--
Duckworth: "We requested further information from Gerald Hogue, KD5CYA, of Conway Arkansas regarding continuing interference between his repeater and the AC5RU repeater. We had notified both parties some time sago that each was responsible for taking steps to minimize interference, but we are seeing no cooperation on the part of the KD5CYA repeater. Hogue has 20 days to respond."

--

But the problem seems to have gone past the repeater versus repeater stage. Now users are getting involved and the FCC is taking action there as well. Again, the FCC's Daryl Duckworth:

--
Duckworth: "On the same topic, the Enforcement Bureau has warned Ronald Lewis of Morrilton Arkansas, KC5BNN, about interference to users of the AC5RU repeater. I was pointed out Lewis that his license renewal comes up in June 2003 and that this matter must be resolved if he is to receive a routine renewal."
--

In its letter to Lewis the FCC said that it will not tolerate deliberate interference between the two repeaters. Also that it does not care if the interference is from a transmission by one of the repeaters or by a user of one of the repeaters making a broadcast intended to degrade the other repeater. Either way, it must stop. (FCC, RAIN)

**

ENFORCEMENT: MORE TROUBLES FOR FAX.COM

More problems for fax.com – the direct fax advertising company recently hit with a 5 point 4 million dollar fine by the FCC. Now a California businessman says that he wants a lot more from the firm in punitive damages for being spammed.

Steve Kirsch, a Silicon Valley executive is suing fax.com for two-point-two trillion dollars. Yes we said trillion with a capitol T. And Kirsch says that he has filed the litigation because he believes that to be the amount consumers should get if the proper penalty is assessed for each and every junk fax ever sent by fax.com, plus triple damages as permitted under federal law.

Kirsch is founder and chief executive of Propel Software in San Jose. He decided to pursue the class action suit after he got a torrent of unsolicited faxed ads. Kirsch estimates an unwanted fax wastes ten cents for the cost of paper, ink and fax machine wear and tear. (Published news reports)

**

NAMES IN THE NEWS: BASS WILL FLY IN OCTOBER

According to the latest news reports, Lance Bass of the boy band 'N Sync will fly to the International Space Station in October. Hollywood producer David Krieff, who has arranged financial backing for the performer's space venture, says that Russian space agency executives and attorneys recently flew to Los Angeles and spent eight days hammering out a 400-page flight agreement with Bass' representatives. Krieff said Bass is slated to blast off October

28th from the Baikonur Cosmodrome in Kazakhstan with two cosmonauts on an eight-day Soyuz "taxi" and resupply mission to the space station. Krieff also disputed remarks attributed to a Rosaviakosmos spokesman Sergei Gorbunov that the Russian space agency might scrub Bass from the mission because he had failed to meet a payment deadline.

Bass hopes to follow in the footsteps of the world's first two space tourists -- American businessman Dennis Tito and South African millionaire Mark Shuttleworth. There is still no word as to whether or not Bass might operate the ham station on board the I-S-S, but the entertainer was scheduled to talk with school children from the Johnson Space Center in Houston on August 29th over the Internet. This, using NASA's Distance Learning Outpost and Education Web Portal. (Published news reports, NASA release)

**

NAMES IN THE NEWS: FORMER HAM TO HOST REVIVAL OF TV GAME SHOW

Donny Osmond, the former KA7EVD, will be helping to bring a legendary television game show back to the small screen. USA Today reports that starting in September, Osmond will be the host of Pyramid, a syndicated revival of the game shows created and hosted by Dick Clark in the 1970s and '80s.

According to Los Angeles ham radio lore, Osmond was reportedly mentored into ham radio in the early 1980's by the late Art Gentry, W6MEP. This, when Osmond and his sister were taping the Donnie and Marie Show at the Golden West Studios in Hollywood. Gentry, who was employed there as a Broadcast Engineer is best known for his development of the FM repeater – a device that changed the way most hams operate on the VHF and UHF Amateur Service bands. He and his wife Millie, K6JJN, were also mentors to many Los Angeles youngsters wanting to enter ham radio. (USA Today, ARNewsline™)

**

NAMES IN THE NEWS: DARA NAMES SCHOLARSHIP WINNERS

Gary Des Combes, N8EMO Chairman of the Dayton Amateur Radio Association Scholarship Committee has announced the recipients of the clubs 2002 scholarship program. Named to receive financial support for their future education are Thomas Tenaglia, K3TAT; William Bailey, KF4VAU; Victoria Morgan, KF4PNI; Nicholas Bishop, KG6JSA; Jeanne Hansen, KB2RAP; Sara Hanna, KE6MWX; Jeffrey Doub, KC8IOC; Michael J. Haessler, KB9TGF and Amy Morris, KI6F. Scholarship awards run between $1000 and $2000. (DARA)

HAM RADIO BUSINESS: NEW LINK-COMM SOFTWARE ENHANCES REPEATER CONTROLLERS

Attention repeater owners. If your system uses a Link-Comm controller, have we got good news for you.

Steve Srobel of Link Communications has announced that new programming software for the RLC-1 Plus, RLC-2, RLC-3, RLC-4, and RLC-Club is now available. The new software allows you to program messages, timers, autodial numbers, etc. with a point-and-click interface. It also provides a way to manually edit and upload a file of other advanced commands.

The best part is that it can be downloaded for free from www.linkcomm.com/quickstart.html. You can email feedback about the program to mark@l... (Repeater Owners Remailer)

**

HAM RADIO BUSINESS: COMMEMORATIVE PIN FROM KENWOOD

Kenwood Communications is offering a commemorative "United We Stand" pin with the purchase of any new Kenwood Amateur radio. The offer is good in the United States only and began on August 20th. It runs till further notice. More information as on the web at www.kenwood.net/ama_page.cfm (Kenwood Communications)

CONVENTIONS: CB'ERS TO MEET DOWN-UNDER

Are you into C-B radio? Do you like to travel? Would you like to go to a week long C-B Break? Well here's a convention for you.

Q-News reports that the Albatros C-B Radio Club will be holding its annual convention the week of September 14th to the 21st. That's right it is a week long C-B show with all the trimmings. New gear. lectures and what have you.

It all takes place in the city of Ballina. That's down-under -- in Australia. (Q-News)

**

HAMFESTS: LIMARC IN NEW YORK SEPTEMBER 15TH

Closer to home, LIMARC, the Long Island Mobile Amateur Radio Club will be holding its fall hamfest on Sunday, September 15th. The venue is Briarcliffe College in Bethpage, New York. Gates open at 6:30 AM for vendors and for the general public at 8:30 AM Eastern time. More information is in cyberspace at www.limarc.org or call

the 24-hour info line at 516-520-9311. (LIMARC)

**

HAMFESTS AND CONVENTIONS: NRC TO WEBCAST

The National Radio Club will hold its annual convention the Saturday and Sunday prior to Labor Day. N-R-C is a group made up of Medium Wave D-X radio listeners with the club founded back in 1933. And in past years the club has set up a carrier current radio station in the hotel where its conventions are held. Normally you cannot hear the broadcast outside the hotel grounds, but this year could be different. This is because the carrier current station will be helped by a broadcast remote pick-up channel that will be used to send the audio across town to a server that will distribute it as a webcast. The frequency to be used belongs to WLIO television in Lima Ohio. Fred Vobbe, W8HDU, explains what will happen.

--
W8HDU: "At the hotel we're going to place a small walkman radio connected
to an old remote pickup unit. The transmitter is on 26.410 in narrowband
FM, and it will relay back to WLIO's studios where the club will have its
server encoding the data stream. The transmitter runs about 40 watts into
a CB type antenna, and it IDs every 10 minutes with the call WPLP549. The
ID won't be heard on the webcast as it's filtered out at the receiver."
--

If you hear this broadcast, you can get a QSL by sending an accurate report to Fred Vobbe, W8HDU, in care of WLIO Television, 1424 Rice Avenue, Lima Ohio 45805. (NRC, W8HDU)

**

INTERNATIONAL-AUSTRALIA: VANDALISM AND BULLETS ON THE AM BAND

On the international scene, the staff of Brisbane Australia commercial AM station 4BH are in shock after what appears to have been a deliberate attack on the radio station's twin broadcasting towers. Q-News Graham Kemp, VK4BB, has the details:

--
4BH broadcasts on 882 kHz and although now a DMG music station is probably better known from it's "glory days" as the Queensland Key Station of the Macquarie Broadcasting Network.

Police are investigating an incident just before 9 o'clock Monday August 19 which saw both broadcasting towers have their guys cut with

what appears to have been bolt cutters, which sent them crashing to the ground, putting the radio station off air, and coming to rest just meters away from a caravan park.

The broadcast industry in Brisbane rallied around, SWITCH AM a public community access station at Long Pocket on 1053 kHz has gone "off air", donating their transmission facility to the Commercial station. 4BH was back on air just 27 hrs later at just some 800 watts, instead of their 5kW, using a retuned 1053 TX and tower, retuned thanks to Radio TAB engineering staff winding some 11 heavy duty inductors.

This incident is unprecedented and has ramifications for all commercial radio broadcasters and the Commercial Broadcasters Industry Association has said "While it is hoped that this situation will not occur again it may be advisable for stations to review, and where necessary, upgrade security arrangements at their transmission facilities".

This is the same site which saw thieves using bolt cutters gain entry to steal some 2 dozen satellite dishes belonging to Radio TAB early in the year. Allegedly the 4BH studios in suburban Stones Corner were fired upon recently, at least one bullet penetrating an office.

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Investigators have not been disclosed whether the three incidents are related. (Q-News)

**

SPECIAL EVENT: DRAKE ON THE LAKE

Back on this side of the Pacific, Greg Compton, N5ZFW, reports over the Internet that the Cherokee County, Texas Amateur Radio Club will be operating special event station called "Drakes On the Lake." This taking place the weekend on September 14th and Sunday the 15th.

The station, using all vintage R.L. Drake gear will be operated on the shore of Lake Jacksonville, which is near Jacksonville, Texas on 20, 40 and 80 meters. Callsigns to be used are AD5KM or KI5P. QSL with a 9 by 12 SASE to Brad Low, AD5KM, 840 Henderson Street Jacksonville, Texas, 75766. (From Internet posting)

**

DX

In D-X, members of the 8Q7ZZ youngsters' DXpedition to the Maldives have returned home after a highly successful operation. Mark Haynes, M0DXR, reports that the group made over 25,000 QSOs between the 30th

of July and 10th of August, including around 330 on 6 meters. The QSL manager for 8Q7ZZ is Phil Whitchurch, G3SWH. (GB2RS)

**

THAT FINAL ITEM: CELL PHONE RELIABILITY

And finally this week, a graphic example of how the cellular telephone network can hiccup at the most inopportune time. Earlier in this newscast, we talked to Andrew Young, N8ARY, up in Grand Haven Michigan. Andrew was using a cellular phone. One of the topics that he and our Producer Bill Pasternak, WA6ITF, were discussing was the reliability of these devices. Guess what happened next:

--
Pasternak: "It seems to me that more and more hams are carrying cellphones than HT's. Have you noticed that also?

Young: "Yes. Myself, I have a cellphone that rarely works when there is a busy time -- like during some sort of event. When a lot of people get in one area mu cellphone almost never works and usually I have t...."

Phone line sound: "click. click."

Pasternak. Hello.... Hello.... I think your cellphone stopped working."
--

Talk about a graphic example happening at the most convenient time. Thats right. The cellular phone system up in Michigan did what so many seem to do. It abruptly went away.

Ham radio is always there when you need it. Another good reason to always carry your H-T when you are out and about. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

No before we go, a special word of congratulations to Amateur Radio Newsline reporter Cathy Anno, KB0FDU. This on the birth of her third child -- a boy named Conner William Anno born on Friday August 23rd. Little Conner weighed in at just over 6 pounds and was 19 1/2 inches long. Cathy describes her new son as being -- and we quote -- "just

perfect." And less we forget, Cathy, her husband Darren and little Conner are all doing just fine.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Norm Seely, KI7UP, saying 73, and we thank you for listening." Amateur Radio Newsline is Copyright 2002. All rights reserved.

KC4AAA, South Pole should be coming out of it's propagation
hibernation fiarly shortly, probably before the end of September.
They are usually strong on 14.243 mHz in USB. You can always tell it
is them by the "famous" polar flutter on the signal.

Well I been off the air for a while I have old IRC's from 1990 that have
$.95 are they still good or do I need to get some new ones for $1.05
says the USPS site.

Maybe send two of the old ones - only have 6 of them left, but didn't
want to short circuit a reply because $$ on IRC insufficient.

I am trying to get things together again to operate some DX and have I
also moved to TN from IN.

Got my DXCC last sunny cycle and have upgraded to General and want to
do lots of those things a retired ham does. I was thinking of being
mobile to do some county hunter contacts on 10 before it dies, but
I have yet to find out where they are and get the rig patched up.
I bought a Yaesu 757 but the drive/mic knob is loose so I don't
want to booger it up till it is secure. I contacted the 9 outgoing
bureau and found I still need to sent qsl's there even though I am /4.

Anyone, know where the county hunters sleep? 10m

The special event station W2WTC is quite active right now.

Could someone please tell me the "exact, precise" location of where they are transmitting from?

Does anyone know if the public can visit the W2WTC operating site? I have a non-ham friend in NJ that would like to see the station in operation.

Thank you..... Lee Carkenord KA0FPJ

The old IRC's you have still work fine, one IRC = 1 first class
postage (depending on who you ask, you'll have no trouble finding some
guy who'll tell you that it takes 4 IRC's to get a stamp in 'his'
country).

New ones are not $1.05 anymore, they are $1.75 - but any issued
after Jan 1, 1975 are still good (or so says the U.S. post office).

Hi,

In order to get the Japanese 75 zones award I'm currently searching (unsuccessfully) a complete list of ITU zones.

I have well compiled such a list but it is not accurate enough for that purpose (see http://www.astrosurf.com/lombry/Radio/DXCC.xls).

What I need is a table (i.e excel) listing all ITU zones sorted from 1 to 90 without exception with related DXCC. Do you own such a list ?

Thanks

Thierry

The USPS web site says $1.05???? Boy, that's wrong. They're now $1.45,
and are printed in a much larger format. Technically, I don't think you
can use the old ones, but many DX stations accept them anyway.

I found my $1.05 cost at the USPS site URL
http://www.usps.com/ibu/postalfin/info/faq/inforate.htm

I know this may not be up todate with all the rate changes that took place
this summer.
Can anyone post an updated URL with the $1.45 or $1.75 or something like
that?

Q. What are international reply coupons?

A. International reply coupons (IRCs) provide a convenient method for you to
prepay replies from foreign countries. You can send your correspondent one
or more coupons, which may be purchased for $1.05 each. Your correspondent
exchanges the coupon for postage in his or her country.

LOOKs like a personal trip to the PO is in order... I'll post my cost for
them tommorow. Trip to big city planned
for the morning.

Thanks all who are helping. Glad I am doing some homework before I am on
the air and flooded with
DX replys to make ha ha... rig still looking at me with distress LOL.

That's 100% wrong also. Here's the International Mail Manual from the
USPS. Check page 177, section 372:

http://pe.usps.gov/cpim/ftp/manuals/imm/immc3.pdf

As I said before, new IRC's are $1.75, and IRC's issued after Jan. 1,
1975 never expire.

But just because this is in the USPS manual, don't expect anybody
who works at the Post Office to understand it. Expect them not to.

Not sure about anyone else, but, I had no problem getting a card from either one of them. 3B8FG in April 2000 and 9M2TO in September 2001. 3B8FG was sent direct with green stamp and 9M2TO was sent via JA0DMV with green stamp. Got both with no hassle.

Yes, but nonetheless some countries no longer accept the older
(post-1975) style. Despite what the IMM says, the new larger IRCs say
"must be exchanged by 31.12.2006".

The problem with any CW decoder program is that your using a computer to decode the incoming CW from a human. Spacing etc are dynamic so lots of room for error. That being said if the signal is strong and clean your success is quite good for decoding well. When the band your listening to is a little noisy, this is where all CW programs fail. How do I know this? Tried many and have written a few of my own. Until a program can predict what is being sent, these programs will still fall short of a good operators natural filter. I do believe however a programs will be more intuitive and be able to predict what is being sent as band conditions are poor. Neural Networks is where things are going for character recognition of signatures and handwriting so why not CW decoding!

Regards,
Robert

I wouldn't know what a new IRC says, Bob, because I've never
bought one or seen one.

I would assume that since the U.S. post office no longer takes IRC's
issued before 1975, nobody does. And vice vesa. The idea behind this
program is that the rules apply internationally, to any country who's
a member of the International Postal Union. But the U.S. post office
has no control over what other countries do or don't do. An IRC is
supposed to be exchanged for first class letter rate postage in any
country that's a member. But we all know that doesn't work - the hams
in Germany say they need 2 or 3 IRC's for a first class stamp. So
basically the 'international' system is bullshit.

Bottom line on IRC's is this: They're a pain in the ass. I would
venture to guess they are probably a pain in the ass in a lot of
other countries also.

Every U.S. post office you go to, every post office employee you
talk to, you get a different story.

I've been trying to get rid of IRC's at the local post office here
for about three months.

First time I went, they said they'd take all the foreign ones but none
of the U.S. issued ones. Then they didn't have enuff 80 cent stamps
to exchange all the foreign ones I had. So they told me to come back.

Second time I went, they wouldn't take ANY IRC's. Period.

Third time I went, they would take U.S. issued IRC's but no foreign
issued IRC's.

Now they're gonna call me on the phone (a month ago) when they
figure out when/if/how they can take foreign IRC's again.

If you have IRC's, don't bother to use them to get stamps. It isn't
worth the hassle. Send them to a DX station for a post card, or sell
them to somebody else who wants to send them out. Selling them
used to be easy, but doesn't appear to be any more - I tried to sell

all mine for 60 cents (1/3 what 'new' ones cost) and had trouble finding anybody who wanted them.

What the post office has a problem with is the fact that we have been mailing IRC's back and forth (the same IRC's) for so long that when somebody does get around to trying to cash one in, it's 10 years old - so it was purchased at the rate 10 years ago. I doubt the intention of the IRC program was to see how long we could keep them in circulation before they wear out, but that's what we seem to do with them.......

Postal bulletin #22068, dated 1-24-02 says that the distribution center (central post office) will reimburse the local post office for IRC's at varying rates depending on when they were purchased. What that means is that if I cash in a 1993 IRC, the local post office gives me an 80 cent stamp for it, and then they get 50 cents from the distribution center when they turn it in. So the local

post office here doesn't want to take any foreign IRC's any more because they 'lose money on them'. Which is bullshit also. Since when did money matter to the U.S. government....

That bulletin just gets the post office monkeys more confused, because some of them think that the exchange rate applies to customers exchanging IRC's which it doesn't.

If you cash in IRC's at a U.S. post office, you should get:

1 - 80 cent stamp for any foreign IRC.

1 cent less than face value for any U.S. IRC - so if you cash in an a U.S. IRC that says $1.05 on the front of it, you should get $1.04 worth of stamps.

I don't collect post cards, but over the years when I was in Guam I got a lot of IRC's in the mail, and now that I want to get rid of them, I find it basically impossible to do. But the problem isn't just here at my post office, it's everywhere. Friends in Hawaii and Las Vegas are going thru the same crap with the U.S. post offices there and not getting any results that match from day to day either.

Since most postal employees are too stoopid to read two paragraphs out of a manual and figure out what they say, they should do the world a favor and cancel the program all together.

Rest assured that any DX station in any country would rather find U.S. bucks in the envelope than they would find IRC's.

I haven't bought any either of the new ones either, but received one
with a card from a JA I worked in a contest. He probably wanted my
state, county or IOTA.

I think I bought a few IRCs from the P.O. back around 1955 or so. I've
bought them (at a discount) from DX stations and managers on a few
occasions, as well. I never have redeemed any for stamps.

I figure that nobody actually ever buys or redeems IRCs, they just get
circulated from one ham to another, ad infinitum, like some sort of
grey-market currency.

Yep. What he said.
I bought, scanned and put on web page FYI anyone who is slightly interested new and old IRC from 1990.
http://personalpages.bellsouth.net/m/e/metacalv/ircs.html
Thanks took enough change to buy 2 incase I get a rare DX contact lol

Anyone up to a real challange... get the USPS to update the info on their web page were I thought I had
an answer. LOL
I found my $1.05 cost at the USPS site URL WRONG!

Jim, are taking the signal directly off of the radio or using a microphone.
If directly from the radio to the computer, have you had any problems with
that.
I was reading on their web page that this might be a problem

CW made by hand must be decoded by mind.
CW is not made for decode by machine, it is too variable in time. It works
on slow CW. But high speed...

2850. CONTEST INORC (ITALIAN NAVAL OLD RHYTHMERS CLUB)

Newsgroup: rec.radio.amateur.dx
Date: 2002-09-08 22:32:28 UTC
From: I0GOJ <i0goj@inwind.it>
Message-ID: <0eQe9.20694$AW6.424721@twister2.libero.it>
Source record: 12226

XXII° INORC CONTEST

Saturday 16th and Sunday 17th November 2002

The Italian Naval Old Rhythmers Club (INORC), promotes and organizes
this edition of the Contest INORC, at international character, on program
Saturday 16th and Sunday 17 November 2002.

01 - EMISSION MODE
- Only CW.

02 - DATE AND BANDS
- From the hours 12.00 UTC of Saturday 16th November 2002 to the
hours 12.00 UTC of Sunday 17th November 2002:
on the bands of 10/15/20/40/80 meters

03 - CATEGORIES
We are two categories: N= Naval; I = Independent.
N = OM / SWL enrolled to the INORC or other equivalent Club:
MARAC (Marine Radio Amateur Club) in Netherland.
MF (Marine Funker) in Germany.
RNARS (Royal Naval Amateur Society Radio) in Great Britain.
Etc.
I = OM / SWL of any country, not enrolled at any Naval Club, and
considered "Independent."

04 - CALL
CQ INORC, TEST INORC
- The stations enrolled at a Naval Club (N category) will add "/N"
to they call-sign during the call in order to be immediately
recognizable.

05 - REPORTS
- the INORC or other Naval Club enrolled, will pass the report
RST with the initials of the Club and the number of inscription.
- the INORC enrolled on the category Associate Member will pass the
RST report with the number of inscription and the AM abbreviation.
- The not enrolled (Independent) will pass the RST report with a
progressive number beginning from 001.

06 - POINTS
- The INORC stations (inclusive of Associate Member) and the stations
of
the other Naval Club is worth 10 points.
- The other stations (Independent) is worth 1 point.
- The QSO between stations from 1 point ARE NOT valid.
- The QSO between stations from 10 points ARE valid.

- The same station could be worked one ONLY ONCE for band.

07 - MULTIPLIERS
- Are multipliers the INORC and other Naval Club stations.
- Could be counts ONLY ONCE, independently by the bands
on which has been works.

08 - FINAL SCORES
- Is obtained multiplying the sum of the QSO points for the sum
of the multipliers.

09 - SWL
Is worth the same OM's rules.
- A SWL could not listen a QSO between two stations by 1 point.
- A QSO between a station by 10 points and a station by 1 point
is worth 11 points.
- A QSO between a station by 10 points and an other station by
10 points is worth 20 points.
- The same station could be listened ONLY ONCE for band.
NB: the SWL's reports are very pleasant. In order to enter into the
classifications, is not required a least of listens, but the
Contest Manager will be considered deserving of message the
Log which will reveal a special pledges.

10 - LOG
- The Log, complete of final scores, goes sent within and not
over the 31 December 2002 to the Contest Manager:
IK0XCB Claudio Tata via Della Giustiniana, 764 - 00189 ROMA Italy

- Suggested the uses of the Log sheets and the summary sheet
prearranged by the INORC and that could be required to the
Contest Manager enclosing envelope and postage stamp.
For the count of the points and the print of the log, the use
of the software "TESTINO" which it's possible to take in the
INORC site to the address is recommended: http://www.inorc.it
Can send yourself via email, the file: call.dbf example: G3LIK.DBF
to the address: ik0xcb@tiscalinet.it , please always require the
confirmation of receiving.

11 - DISQUALIFICATIONS
Has disqualified the competitors that:
- doesn't observe the schedules established by the rule;
- operates combined in couples or groups;
- concerts QSY or sked with the correspondent for the repetition
of the QSO on other bands.
- All the INORC stations not in rule with the payment of the annual
share

REMARKS:

to judgment of the Contest Manager will be penalized or
disqualified the competitors that send incomplete Log, with double
QSO not declared, with final scores wrong or with QSO that doesn't

result bilateral on the cross checks.

12 - CLASSIFICATIONS
Classifications in order to the following categories: N - I - S.
N = Naval Club stations.
I = Independent stations.
S = SWL stations.

13 - PRIZES:

Following prizes will be delivered to The first classified of the
category
"Naval" and of the category "Independent" :

1 Horizontal Key mod."Simplex" in gold laminated with cut of INORC coat
of arms, offered by the Sponsor of the Contest I2RTF, you can see it
on the
Internet site: http://www.i2rtf.com
1 Interactive memory Keyer in assembled kit, mod: DXKEY offered by the
Sponsor
of the Contest IK5XCT,you can see it on the
Internet site: http://www.qsl.net/ik5xct/dxkey

1 Crest in ceramics with the excellent reproduction of the INORC coat of
arms
offered by the Sponsor of the Contest I8JYK.

To the first classified of the SWL category will be delivered what
follows:

1 Crest in ceramics with the excellent reproduction of the INORC coat of
arms
offered by the Sponsor of the Contest I8JYK.

XXII° CONTEST INORC

Sabato 16 e domenica 17 novembre 2002

L'Italian Naval Old Rhythmers Club (INORC), che riunisce i radioamatori
italiani e stranieri provenienti dalla Marina Militare e Mercantile,
promuove ed
organizza la ventiduesima edizione del Contest INORC, a carattere
internazionale, in programma sabato 16 e domenica 17 novembre 2002.

01 - MODO DI EMISSIONE
- Solo CW.

DATA E BANDE

02 Dalle ore 12.00 UTC di sabato 16 novembre 2002 alle ore 12.00 UTC
di domenica 17 novembre 2002 sulle bande di 10/15/20/40/80 metri

03 - CATEGORIE
Sono previste due categorie: N = Naval ; I = Indipendenti.
N = OM / SWL iscritti all'INORC o ad altro Club equivalente:
MARAC (Marine Radio Amateur Club) in Olanda.
MF (Marine Funker) in Germania.
RNARS (Royal Naval Amateur Radio Society) in Gran Bretagna.
Ecc.
I = OM / SWL di qualsiasi paese, non iscritti a Naval Club, e considerati
quindi "Indipendenti".

04 - CHIAMATA
CQ INORC, TEST INORC
- Le stazioni iscritte ad un Naval Club (categoria N) aggiungeranno
"/N"
al loro nominativo durante la chiamata in modo da essere
immediatamente riconoscibili.

05 - RAPPORTI
- Gli iscritti all'INORC o ad altro Naval Club passeranno il rapporto
RST seguito dalla sigla del Club e dal numero di iscrizione.
- Gli iscritti all'INORC nella categoria Associate Member passeranno
il
rapporto RST seguito dal numero di iscrizione e dall'abbreviazione
AM.
- I non iscritti (Indipendenti) passeranno il rapporto RST seguito da
un
numero progressivo a partire da 001.

06 - PUNTI
- Le stazioni INORC (compresi gli Associate Member) e le stazioni
degli
altri Naval Club valgono 10 punti.
- Le altre stazioni (Indipendenti) valgono 1 punto.
- I QSO tra stazioni da 1 punto NON SONO validi.
- I QSO tra stazioni da 10 punti SONO validi.
- La stessa stazione pu&#65533; essere lavorata una sola volta per banda.

07 - MOLTIPLICATORI
- Sono moltiplicatori le stazioni INORC o di altro Naval Club.
Possono essere contate come moltiplicatore UNA SOLA VOLTA
indipendentemente dalle bande sulle quali sono state lavorate.

08 - PUNTEGGIO FINALE
- Si ottiene moltiplicando la somma dei punti QSO per la somma dei
moltiplicatori.

09 - SWL
Valgono le stesse regole degli OM.
- Un SWL non pu&#65533; registrare un collegamento fra due stazioni da 1
punto.
- Un QSO tra una stazione da 10 punti ed una stazione da 1 punto
vale 11 punti.
- Un QSO tra una stazione da 10 punti ed un'altra stazione da 10 punti

vale 20 punti.
- La stessa stazione pu&#65533; essere ascoltata UNA SOLA VOLTA per banda.
NB: i rapporti degli SWL sono molto graditi. Per entrare nelle classifiche della categoria non &#65533; richiesto un minimo di ascolti, ma il Contest Manager riterr&#65533; meritevoli di segnalazione i Log che riveleranno da parte dell'SWL un particolare impegno.

10 - LOG
- I Log, completi di punteggio finale, vanno inviati entro e non oltre il 31 dicembre 2002 al Contest Manager:
IK0XCB Claudio Tata via Della Giustiniana, 764 - 00189 ROMA

- Si consiglia l'impiego del programma "TESTINO" appositamente studiato per
il Contest prelevabile presso il Sito INORC al seguente indirizzo:
http://www.inorc.it oppure dei fogli Log e del foglio riassuntivo predisposti dall'INORC e che possono essere richiesti al Contest Manager allegando busta e francobollo, altrimenti scaricati dal Sito
Internet: http://www.inorc.it
Coloro che utilizzeranno il Programma "TESTINO" al termine del Contest
possono compattare l'intero software ed inviarlo via e-mail al seguente
indirizzo: ik0xcb@tiscali.it

11 - SQUALIFICHE
Sono squalificati i concorrenti che:
- non rispettano gli orari stabiliti dal regolamento;
- operano riuniti in coppie o gruppi;
- concordano QSY o sked con il corrispondente per la ripetizione del QSO
su altre bande.
- Le stazioni INORC che non risultano in regola con il pagamento della quota
annuale.
NB: A giudizio del Contest Manager saranno penalizzati o squalificati i concorrenti che inviano Log incompleti, con QSO doppi non dichiarati con punteggi vistosamente errati o con QSO che non risultano bilaterali
nei controlli incrociati.

12 - CLASSIFICHE
Sono previste le classifiche per le seguenti categorie: N - I - S
...
N = stazioni Naval Club.
I = stazioni Indipendenti.
S = stazioni SWL.

13 - PREMI
Al primo classificato della categoria "Naval" e della categoria "Indipendenti" verranno consegnati i seguenti premi:

1 Tasto orizzontale mod. SIMPLEX in oro laminato con incisione dello stemma
INORC, offerto dallo Sponsor del Contest I2RTF, visibile presso il Sito Internet: http://www.i2rtf.com

1 Chiave elettronica in kit, mod: DXKEY offerta dallo Sponsor del Contest
IK5XCT, visibile presso il Sito Internet:
http://www.qsl.net/ik5xct/dxkey

1 Crest in ceramica con la eccellente riproduzione dello stemma INORC offerta dallo Sponsor del Contest I8JYK.

Al primo classificato della categoria SWL verr&#65533; consegnato:

1 Crest in ceramica con la eccellente riproduzione dello stemma INORC offerta dallo Sponsor del Contest I8JYK.

2851. An Interesting Quote - US Official and The DXCC List

Newsgroup: rec.radio.amateur.dx
Date: 2002-09-09 00:43:25 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3D7BEEAD.801E2B21@erols.com>
Source record: 12227

The September 9th 2002 Ohio Penn DX Bulletin had an interesting quote from K4SSU, essentially saying that the ARRL received a call from a Washington DC official asking that Navassa and Desecho Islands be deleted or removed from the DXCC list. The request was not honored.

A cryptic item although it may be related to Homeland Security matters. Does anyone have any factual, not conjecture, information on what Department the U.S. official represented and the reason(s) behind the request? Since the topic was opened up by virtue of the Ohio/Penn DX Bulletin Item and K4SSU's quote, curious if there is any substance to the quote?

Pretty strange. A quick Google search shows up nothing interesting.

The CIA Factbook has three items of possible interest regarding Navassa: it mentions a "private claim against the island"; it mentions a "strategic location 160km south of Guantanamo" (but there's a lot of other-than-friendly territory a lot closer than 160km from Guantanamo!); and it says Haiti has a competing claim to the island.

Desecheo, on the other hand, doesn't even rate a separate entry in the Factbook. It's shown on their map of Puerto Rico in the PR entry.

My understanding is that permission to land on either island is difficult to impossible to obtain - in the case of Navassa due to pirates (?!) and drug smugglers, and on Desecheo due to status as a wildlife refuge.

Maybe the agencies in charge of landing permission are simply tired of fielding requests from hams and hope delisting will cause us to stop bothering them?

Who told you that? According to the postal rules, one IRC is fine for a "Weltbrief Luft" over here. But I could well understand if Deutsche Post were reluctant to accept them - with our high postage rates (1.53 EUR for the abovementioned letter), I suspect that they are almost sure to lose some money in the exchange.

However, there is really a problem with those old IRCs which have been mailed back and forth. Originally, they were intended to be redeemed for the reply to the letter in which they were sent. Maybe it is better to use them up for any letter to foreign parts instead of keeping them.

2855. Poll : QSL delay ?

Newsgroup: rec.radio.amateur.dx
Date: 2002-09-09 12:28:42 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0209090428.6da9002a@posting.google.com>
Source record: 12231

Hi,

I discuss on several webpages
(http://www.astrosurf.com/lombry/menu-qsl.htm)
the QSLing.
I wonder that nowedays the delay is quite long to get QSL back : if
local QSL arrive quite "quickly" (2-6 months) via buro, when DXing the
delay reaches several years...; some of my licenced friends only
receive today (2002) QSL they sent in... 2000 or even in 1998 when
they were SWL !
When they receive an answer as only 75-80% of their QSl and answered
and come back home :-((.

On the contrary, when QSling direct according my friends the rate of
response exceeds 99% to 100% (the mail includes 1 or more IRC and
sometimes GS depending the request of the QSL manager or the remote
OM. See comments about the method on my website).

So my question is more a poll.
- What is the rate of return of your QSL via buro, and direct ?
- Do you still experiment return of QSL sent more than 2 years ago ?
- When QSLing direct, if the QSL manager or destinee does not mention
anything about his/her charges, do you send only IRC (and how many
usually) or only GS or a melting of both depending the "quality" or
the "most wanted DXCC" quality of the DX ?

NB. Your answer will help me to update the related page on my website
(if necessary).

Thanks for comments

2856. DXCC with no/one ham ?

Newsgroup: rec.radio.amateur.dx
Date: 2002-09-09 12:35:06 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0209090435.235b4ce3@posting.google.com>
Source record: 12232

Hi,

In order to complete my website about DX activities, I 'm searching this information :

Is there a list of all DXCC where there is currently NO ham activity at all (I think to all these pacific islands) and totalitarian countries, and a list of countries where there is only ONE active ham (I think to Lybia, Sudan, etc).

Such lists seem to not exist due to the fact DX-peditions are regularly organized in most of these "most wanted" countries.

Your help is welcome, and probably not only for me but for all OM/YL trying to contact/listen "rocks" currently free of hams... ;-)

Thanks

Thierry

Nobody told ME that, but I've seen it in numerous IRC/QSL
discussions over the last few years.

There's a guy in France who requires $5 U.S. for QSL cards
too, so maybe the multilple IRC's required in Germany deal
falls into the same category.

If you go to Google and search newsgroups, you'll find a lot
of discussion about Germany and IRC's - a lot from the only
other group of people who seem to use them as much as hams
do, people looking for genealogy information. For example:

>The current version of IRCs clearly state that each is exchangeable for
>the postage required for a minimum weight airmail reply. In Germany this
>costs 3 Deutschmarks (unless changed very recently). However, German post offices
>would only give me DM 2 when I visited 2 years ago. So I guess one has to
>send at least 2 IRCs if return postage is to be covered.
>An IRC costs $1.10 currently, but many smaller post offices in my area
>don't carry them because of low demand.
>I find them very handy for sending small payments to Germany as well.
>Hans Schrader

http://groups.google.com/groups?q=germany+IRC+post&start=100&hl=en&lr=&ie=UTF-8&oe=UTF-8&selm=Pine.SV4.3.92.960702182008.8914A-100000%40bookworm&rnum=113

DL2HBX said:

>In Germany there has been a change in September 1996: Before, you
>could *definately not* send a QSL via airmail using one IRC. You

Those are two examples of the types of discussions I remember
seeing. But since I don't collect post cards, I spend all my money on
booze and fast women, so I don't have any first hand complaints
about 1 IRC not working in Germany.

Could have just been some more of the usual HamScam QSL
business,like:

One can always read what's on the coupon (what a concept!),
where it refers to "the minimum postage... sent by air to a
foreign country".

Postage from Germany to the US is more than to some of its
neighbo(u)ring countries, so when you exchange an IRC in DL
you get stamps that are not sufficient for airmail to the US.

Also, if you read the front of the IRC with a French dictionary
to hand, you can see that the stamp in the left-hand box is
optional ("facultative"), so don't believe all these people who
tell you that the IRC is invalid without a stamp there.

Now, I admit that hams know more about IRCs than most of the
postal "workers" in the US and elsewhere, but we may as well
get our facts right to start with.

As a long-time QSL mangler, I've had thousands of IRCs pass
through my hands, but have never tried to exchange one for a
stamp, so take the above with a grain of sodium chloride when
dealing with the Real World[tm].

Well, there are always people who don't seem to play according
to the rules ... but nobody needs to play *with* them.

> There's a guy in France who requires $5 U.S. for QSL cards

Too bad ... for him. I won't send him a letter.

> too, so maybe the multilple IRC's required in Germany deal
> falls into the same category.

Could be.

And after all, even German postal employees may be misinformed (or
haven't had a look in their manuals).

>>I find them very handy for sending small payments to Germany as well.

>>In Germany there has been a change in September 1996: Before, you
>>could *definately not* send a QSL via airmail using one IRC. You
>>only got stamps worth 2 DM, but airmail fee is 3DM (=2$)!

There has been a change generally: originally IRCs were only good for
surface postage, only a couple of years ago air mail was included.

This is a difficult question because there are some countries (I'll single out some rather large Caribbean entities) that may have a number of licenses issued but nobody is active on HF...or a on certain mode/band.
However, most any major contest brings a DX-pedition or even an individual operation.

Another example is a place like Desecheo that has no population but anybody can reach there easily with a one hour boat-ride and it tends to show up quite often (and is easier to hear), maybe moreso than some countries that do have active hams.

IMHO,
Bill WX4A/KP4

Hi!

The two outstanding ones that come to mind are Andaman & Nicobar Islands and Scarborough Reef. In the Andaman & Nicobar Islands case, there are no operations allowed by the Indian government, not even by Indian nationals! That says alot about when the next time this one will be on the air. I personally believe that this one should be looked into by the DXCC desk to determine what its status should be since all amateur radio operations are forbidden from there.

Amateur Radio Newsline™ Report 1308 – September 6th, 2002

Amateur Radio Newsline report number 1307 with a release date of Friday, September 6th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. 222 to 225 MHz comes under attack once again, N Sync's Bass may not fly to the I-S-S after all and an Ohio city regulates 11 meter C-B. Find out the details exclusively on Amateur Radio Newsline report number 1308 coming your way right now.

(Billboard Cart Here)

**

THE WAR TO SAVE OUR BANDS: A NEW ATTACK ON 222 - 225 MHZ

Some are calling it Deja Vous. This as big business once again sets its eyes on grabbing a ham band and converting it into a money making machine. And once again its the old 220 MHz band. David Black, KB4KCH, is here with the details:

--

Once again, amateur radio frequencies may be under siege. Large corporations wanting to become even bigger want hams off the 222 to 225 MHz band, so they can make money. This time, the challenge comes from Data Commlink Incorporated and its twenty electrical cooperatives. Data Commlink filed comments in W T Docket 02-224.

That's an FCC proposal that began innocently enough. The proposal sought to gather comments on requests for waivers to provide band management services in the 220 to 222 MHz band. That's the piece of spectrum that used to belong to Amateur Radio but which hams say was stolen by greedy businesses over a decade ago.

But page 10 of DataComlink's filing holds comments that strike straight at amateur radio. The company says quote--the spectrum at 222 to 225 MHz that is currently held by the Amateur Radio Service is being underutilized. In the early days of 220 MHz commercial regulations, amateur Service licensees argued that their spectrum was necessary and important in order to provide communications in the event of disaster or emergency. Although we take no issue with this claim, we do not feel that the 222 to 225 MHz band has been utilized as well as Amateur Radio claimed it would by so-called no-code hams in their efforts to keep a foothold in the 220 MHz arena.

The filing then presents a direct challenge to ham radio. Without citing any evidence, Data Comlink asserts that in nearly all densely populated areas, the 222 to 225 MHz band is largely quiet. The company claims that only what it terms as handful of individuals in the Amateur Radio Service even use the

spectrum. Data Comlink then says hundreds of thousands of potential commercial users wait with no alternatives.

Data Comlink tells the FCC that--with considerable commercial interest already in the 222 to 225 MHz band because of waiver requests--it feels that the frequencies amateur radio holds would be much better utilized for commercial use. The company says existing users of the spectrum -- ham radio operators -- are so few in number that the economic impact on those affected would be minimal.

As for where the thousands of US hams who actually do use 220 to 225 would wind up, Data Comlink says nothing. Another issue is left unaddressed. If the FCC were to actually give the Data Comlink proposal any serious consideration, who would reimburse repeater owners the hundreds of thousands of dollars invested in their systems? DataComlink is silent on that one.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.
--

What credence will the FCC give the Data Comlink idea? That's hard to say. Since it comes in the context of comments on another matter the Commission could simply rule that anything dealing with 222 to 225 MHz is not germane to the issue. On the other hand, the FCC could use the Data Comlink commentary as the basis for a Notice of Inquiry aimed at reallocating the 222 to 225 MHz band to commercial use. Which way they will go will not be known for a few months at the latest. In the meantime ham radio had better keep a close eye on the situation so that nothing is covertly slipped by.

The complete Data Comlink filing is on the web at http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6513289200 (From comments filed to FCC by Data Comlink)

**

RADIO RULES: BAND SHARING REQUEST FOR 70 CM

The ARRL news reports that an amateur from Virginia has petitioned the FCC to allocate eight channels in the 70-cm band for use by visitors from Europe and the United Kingdom with Personal Mobile Radio transceivers. The recently authorized PMR 446 is similar to the US Family Radio Service. Dr. Michael Trahos, KB4PGC, a physician from Alexandria, filed the petition last January, saying it would help to promote international goodwill. The FCC has designated the petition as RM-10521. (ARRL)

**

ENFORCEMENT: HAM CHARGED WITH MISDEMEANOR IN ILLINOIS TRAGEDY

An Inverness Illinois man who authorities say misused a police radio channel has been ordered to turn over all the radio gear that he owns to local authorities. Bruce Tennant, K6PZW, has more:

--
According to a report in the Chicago Tribune Cook County Judge Joseph Urso has

ordered that William Bily turn over all his transmitting equipment to Barrington-Inverness police. This, as a condition of his release on bond while awaiting trial on misdemeanor charges.

Bily appeared August 30th in the Rolling Meadows branch of Cook County Circuit Court in connection with misdemeanor charges of resisting a peace officer and interfering with emergency communications. A longtime amateur radio enthusiast, Bily is said to have disrupted police communications Sunday August 25th by transmitting over the Barrington-Inverness police radio channel. When Officer Steven Graham came to his home, Bily allegedly resisted arrest. Authorities say that a struggle ensued and that during their tussle Officer Graham who was only 53 suffered a fatal heart attack.

Asserting the heart attack resulted from the scuffle, the Cook County medical examiner's office ruled Graham's death to a homicide. But Assistant State's Attorney Steven Rosenblum said that his office does not intend to seek more serious charges against Bily.

Bily's attorney, Frank Cece, asked that his client only be forced to hand over radio gear that could be used to transmit on the police radio band. He maintained that Bily, a Marine veteran who saw combat during the Vietnam War, has much equipment that poses no risk to police radio frequencies.

But States Attorney Rosenblum countered that this is not the first occasion police had visited Bily's house. The first time was on July 4th of 2000, also for allegedly interrupting the police frequency.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

As part of the bond agreement Judge Urso also ordered that Bily not possess any firearms and that he not contact the family of the deceased officer. A trial is set to take place on October 2nd in the Rolling Meadows courthouse.
(Adapted from information supplied by KC9RP, W9FS and others)

**

ENFORCEMENT: “RABBIT EARS” THE HAM JAMMER GETS JAIL

A CB operator from Florida with an apparent hatred of hams will spend the next year in a federal prison. Amateur Radio Newsline’s Bill Burnett, KT4SB, reports from Miami.

--
He called himself Rabbit Ears on the C-B two-way. He also harassed ham radio communications on several bands. And now, Jupiter Florida Citizens Band operator William Flippo will spend a total of 15 months in federal prison. He will also pay a $25,000 fine for jamming Amateur Radio communications and transmitting without a license.

According to the ARRL Letter, Federal District Court Judge Daniel Hurley imposed the sentence August 29th. This, following a guilty verdict on June 19th on four counts of operating a radio transmitter without a license and another four counts of deliberate and malicious interference.

According to trial testimony, Flippo primarily had targeted members of the Jupiter-Tequesta Repeater Group for jamming and regularly interfered with amateur operations, especially on 10 and 2 meters, over an approximately three-year period. He has been in custody since the guilty verdict and underwent a psychiatric evaluation prior to sentencing.

At the sentencing, Flippo reportedly wept. He said that he had turned over a new leaf and claimed he was sole support for his wife and two daughters. But Judge Hurley was not impressed. He told the 60 year old Flippo that he was old enough to have considered the consequences of his actions. Hurley also alleged numerous incidents of perjury in the course of Flippo's testimony during his six-and-one-half day trial.

Judge Hurley also told Flippo that wants a full financial disclosure from him. And when he does get out of jail, Flippo will spend another year on supervised probation during which he cannot own radio gear or firearms. In other words, for the next two years the law will be watching this C-B'er like a hawk.

In Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.
--

Judge Hurley ordered Flippo to immediately start serving his sentence. The former C-B operator was reportedly led into and out of the courtroom in shackles and leg irons. (ARRL, others)

RESCUE RADIO: HAMS, CB'ERS, GMRS AID AFTER TORNADO

Hams, C-B's, and just about anyone with a radio system not dependent on phone lines is pitching in to provide emergency communications in Ladysmith Wisconsin. This follows a devastating tornado on Monday, September 2nd that destroyed a major part of the town and completely knocked out the areas communications infrastructure. Twenty people were injured.

As we go to air, there is still no wireline telephone service and cellular service is spotty at best. The personal communications teams are reportedly augmenting local law enforcement and fire services in relief efforts. Wisconsin Governor Scott McCallum declared the Ladysmith a disaster area. (Published news reports, on-air reports)

**

HAM RADIO IN SPACE: RUSSIA TELLS BASS HES OUT OF ISS TRIP

A Russian space official said on Tuesday September 3rd that N Sync singer Lance Bass has been asked to leave Russia's cosmonaut training program and will not be the world's third space tourist. Sergei Gorbunov, a spokesman for the Russian Space Agency, said the decision to end negotiations with Bass was made in connection with what was termed as violations of his contract to fly on a supply mission to the orbiting outpost.

Bass began training in July at Star City, and just returned to Russia on Sunday after spending a week at NASA's Johnson Space Center in Houston with the other two crew members. There, Bass was trained in use of several station systems including the ARISS ham radio station. Now, Gorbunov said Bass, who had hoped to fly to the Space Station aboard a Russian Soyuz rocket on October 28th, would be leaving and would not be permitted to return.

Gorbunov said that in place of Bass, the Russians would likely send up a cargo container with extra equipment needed on the International Space Station. Gorbunov said the container has already been prepared and is ready to go.

But Bass’s representatives have a different story. They say that that its all a misunderstanding and that the 23 year old singer should be back in training shortly. If he does make it to orbit, Bass will become the youngest person to ever fly in space. (Published news reports)

**

RADIO LAW: LANCASTER OHIO HAS NEW CB CONTROL LAW

Lancaster Ohio now has a new City Ordinance to put teeth into local enforcement of the FCC’s Part 95 CB radio rules. The measure was passed on August 26th and is the handi-work of Lancaster City Law Director David Trimmer and a local area radio amateur named John Hilliard, W8OF. The two put the legislation together over the last several months and sent it twice to the FCC office in Farmington Hills, Michigan for review and comments.

Under the law, CB radio users who operate on what’s termed as an unlawful frequency or using excessively powerful equipment could be cited for a misdemeanor, with a maximum penalty of 180 days in jail and a $1,000 fine. Ham radio operators are exempted because the city says that they are trained, licensed, are regulated differently under federal law.

City officials estimate there are at least 250 people operating 11 meter Class D CB radios in Lancaster and not all follow FCC rules. The city's law will give prosecutors a tool to fight these abuses. The FCC believes that Lancaster is the first municipality to enact such a far-reaching ordinance to regulate CB radio within the city limits. (ARNewsline™ from information supplied by W8OF)

**

ENFORCEMENT: YUCAIPA CALIFORNIA TEST SESSION INVESTIGATION CONTINUES

The FCC audit of a W5YI-VEC Amateur Radio test session in California is continuing. The ARRL Letter reports that so far, the probe into a September 1, 2001, examination session in the city of Yucaipa has led to the suspension of seven volunteer examiners and the cancellation of five Amateur Radio licenses.

The W5YI-VEC's Larry Pollock, NB5X, said possible irregularities surfaced earlier this year in the form of an e-mail and a telephone call concerning two candidates at VE sessions in Yucaipa. Pollock said that one of the reports was that a license had been purchased in California. The other was that the individual in question could not copy code, and that if he had passed the exam, he had done so fraudulently.

After considerable investigation on his own, Pollock said he saw enough questionable data that he felt retesting was in order. That's the remedy he proposed to FCC Special Counsel for Enforcement Riley Hollingsworth, K4ZDH. That was the action taken and also the action which lead to the five cancellations. The FCC's Hollingsworth said the agency would continue to investigate other examinations administered by the VEs involved in the September 1, 2001, session in Yucaipa. (ARRL)

**

ENFORCEMENT: MAN MADE QRM ON 20 METERS

The Maritime nets on 14.315 MHz are reporting problems with interference. VK2UW says that the interference appears to be man made and regularly appears as both noises and CW type transmissions. The Australian Communications Agency has been notified and is monitoring. (Q-News)

**

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

A reminder. If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only this month, September, is canceled. There will be a TRW Swap Meet the last Saturday of the month in October, November and December. For more information visit http://w6trw.com on the world wide web. (TRW ARC)

**

CONVENTIONS & HAMFESTS: BOXBORO MASS GROWS

Attendance at this years Boxboro Massachusetts Hamfest seemed to be back to its normal level of about 3,000. This continues an upward spiral first noted a few weeks ago at the Huntsville Hamfest in Alabama.

According to observers, the exhibit hall was busy all day Saturday and there seemed to be an increased number of big-ticket sales. This again mirrors what happened at the shows in Huntsville and to a lesser degree in Escondido California that same weekend.

The biggest draw in the forums area was once again Bob Heil, K9EID, and his audio clinic road show. Bob had about 100 people in the room, many of whom left the session and immediately hit the dealers to buy the appropriate peripheral gear.

Boxboro is one a dwindling number of hamfests and conventions that still has an annual banquet. This years speaker was ARRL President Jim Haynie, W5JBP. Also on the program was live music from a four piece band.

How good was this years Boxboro Hamfest? Vertex-Standard's Chip Margelli, K7JA sums it up this way. He says that he couldn't leave the booth or take a break until 4:15 Saturday afternoon. And that kind of says it all. (K7JA, others)

**

WITH THE HANDI HAMS: AUDIO BULLETIN ON THE WWW

The weekly Handi Ham e-letter is now available as an audio file. Its in cyberspace on the Handi-Ham Audio page at www.handiham.org. Archived text issues are also available at the same URL. (HandiHams)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

INTERNATIONAL - SOUTH AFRICA: HAMS CONTINUE TO ASSIST AT WORLD SUMMINT

Ham radio is continuing its support effort at the U-N Sponsored World Summit on Sustainable Development. With the latest, to Johannesburg and Hans van der Gronnendal, ZS6AKV:

--

AUDIO REPORT ONLY: You can hear it at http://www.arnewsline.org

--

More on ham radio at this important world summit next week.

**
INTERNATIONAL – SOUTH AFRICA : JOHNNY NEETHLING, ZS1GB – S.K.

Still from South Africa comes the sad news that Johnny Neethling, ZS1GB, passed away on Friday 19 July. Neethling as 80 and was licensed just after World War 2. ZS1GB was well known in Radio and TV circles. He was also involved in maintaining equipment in the first the first heart transplant operation to take place in South Africa. (RSGB)

**

INTERNATIONAL - GIBRALTER: WILFRED GUERRERO, ZB2IB – S.K.

Q-News reports the unexpected death of well known Gibraltar radio amateur Wilfred Guerrero, ZB2IB. Guerrero was 55 years of age and for many years was the mainstay of amateur radio in Gibraltar. Most recently he pioneered,

virtually single-handedly, the introduction of the Foundation License in that nation. (Q-News)

**
INTERNATIONAL - AUSTRALIA: VK UHF CB TECH STANDARDS CHANGE

The technical standards for C-B gear used in Australia are changing. Q-News Graham Kemp, V-K-4-B-B, reports from down-under:

--
APCNews says the VK UHF CB equipment standard is to change. The standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. From Q-News Australia, I’m Graham Kemp, VK4BB.
--

The change affects only the Australian U-H-F Citizens Radio Service. No other bands are affected. (APC News, Q-News)

**

INTERNATIONAL – SCANDINAVIA: NEW MAJOR HAMFEST IN EU

A major new European amateur radio event will take place in Gothenburg Sweden for the first time in April next year. The Scandinavian HamVention 2003 will be a big hamfest where Scandinavian and other European radio amateurs can get together. There will be a large exhibition with amateur radio dealers from all over Europe and it is planned to offer Scandinavia's biggest flea-market yet, allowing radio amateurs to trade, buy and sell everything to do with our hobby. A traditional Scandinavian amateur radio dinner will be held and there will also be a special ladies' program. The Swedish national amateur radio organization, the SSA, will hold its annual meeting at the same time. Further details are on the Scandinavian HamVention website http://www.scandiham.com/. (GB2RS)

**

DX

In D-X, the Canadian licensing authority, Industry Canada, has authorized the use of special prefixes to celebrate the 125th anniversary of Japanese immigration to Canada. The special prefixes will be on the air from the 1st of September until the 31st of October.

And this for those listening across the Atlantic a lot higher in frequency. Word from the Radio Society of Great Britain that the G-B-3-N-W-K microwave beacons located in North West Kent are currently non-operational. The beacons, which usually transmit on 1296.81 and 2320.85MHz are off the air until further notice due to site problems.

**

THAT FINAL ITEM: 911 REMEMBERED

And finally this week, we pause to remember the tragedy of Tuesday September 11th 2001. Here’s Amateur Radio Newsline producer Bill Pasternak, WA6ITF.

--
I’m going to tile this as an editorial. Ill also promise to keep it short.

We have all heard these words before. “September 11th, 2001 is a day that changed all of our lives forever.”

The pictures are still there in our minds eye. The giant Boeing jets crashing into the World Trade Center. The buildings crumbling to the ground. The fire at the Pentagon. The scorched earth in Pennsylvania.

And the other scenes. The ones only known to ham radio. Those of the radio amateurs from New York, Washington and Pennsylvania who sprang immediately into action. The hams from across America who dropped everything, grabbed their H-T and traveled sometimes thousands of miles -- paying their own way -- to become the second, third and forth wave of relief operators and volunteers.

No, ham radio was not on the front page of newspapers. Hams were not the lead story on the evening news. The tragedy of 911 was the story. The job of ham radio was to be the carrier of the message so that aid and comfort could be brought to the victims of this horrific and cowardly act of terrorism.

What 911 showed is that our loose knit fraternity can come together when the need arises. That we maybe called radio amateurs, but that we are communications professionals. That ham radio is there when it is needed.

On 911, ham radio did the job its people have trained themselves to do. The hobby has since moved on. So has our nation. But neither will ever be the same.

I’m Bill Pasternak, WA6ITF
--

We pray that a tragedy like 911 never happens again.

**

>amateur radio operations are forbidden from there.

That has never been part of the qualification for DXCC
country/entity/critter status. Many countries were off
the air officially for many years but all came on the
air eventually. It's part of the DXCC game - if you
play the game, you have to hang around a long time, and
you can't make DCCC Honor Roll in one weekend.

Personally I'd be happy to see VU4/VU7/BS7 taken off the
list as I haven't worked them - yet :-)

The only ones I have are rather dated (early 90s) but they say "minimum postage....surface to a foreign country".
If you've got any real old ones I think it stated that the amount was valid for a surface letter back to the country of origin, hence the requirement for a stamp to show where it originated.

Clearly they keep changing the rules so what was formerly true no longer is. No wonder postal clerks can't keep up with it all.

Andaman Island (VU4) is the one DX entity that I need to have them all. In spite of that, I still like to have it remain one the DXCC list.

To "be looked into" is certainly not part of the qualification towards the DXCC, as you've stated. My statement isn't to find out whether it "qualifies" for DXCC because it's inactive, it would fail to have fallen under one of the five DXCC List criteria's 1. Political Entities 2. Geographical Entities 3. Special Areas 4. Ineligible Areas 5. Removal Criteria.

My statement is to find out the purpose of the ban, including it's national people, plus why there is no reasonable or logical answer from the Indian government. From what I can gather, verbatim, internet and other means, there has been no "formal" announcement to this ban, just "because we say so" has been the approach.

I too have yet to work Andaman, and personally I'm not worried if it stays or is removed from the list, but I would like to see some questions truthfully answered.

Where on earth are the SSB cards for this DXpedition?

CW cards received over a month ago.

?

Hi Derek,

Dealing about DXCC desk, do you know what institution manages this
list and what could be its URL or address ? Is this an US one of a
desk similar to ITU ?

Thanks
Thierry

2872. Callsign, qsl of Kings/Sultans/Pdt ?

Newsgroup: rec.radio.amateur.dx
Date: 2002-09-10 06:54:55 UTC
From: lombryt@hotmail.com

Hi,

An original question :
There are around the world a few or near "supreme authorities", kings, sultans and other presidents who are (active) hamradios. Searching in my QSL I have found (ex-)King of Jordania, JY0, some sultans in U.A.E, Vlad Putin to name a few (I cannot provide their callsign as I'm not writing this mail from home).

Looking in your QSL binder, could you provide me a list as complete as possible of such H.S.A callsigns ?

Thanks.
Thierry

Well, I'm not Derek, but anyway ...

DXCC is ARRL's idea and "business", DXCC desk is part of ARRL.
They are the radio club who issues the award, and they make the rules
for it - including the list of entities.

ITU has nothing to do with DXCC. They (as an international organization)
don't issue amateur radio awards (although an ITU radio club may do so,
but as a ham organization, not as ITU).

I don't know that any special license is required for operating.
However special permission is required to physically be there.

Desecheo requires a permit. Since the US Govt. has not allowed access to Desecheo for a number of years, it is one of the most sought after DXCC countries.

You could easily reach Desecheo and mount a quickie DXpedition, but for DXCC it would be worthless.

Geordi,

I'm trying to be nice but reading a book, even if one existed,
will not teach you Morse.

CW is an aural skill. You have to hear the characters and recognize
them from the sound that they make. That is why most of the
answers pointed you towards software. If 25 dollars is too
steep, go to the public library and look at the ARRL Handbook.
If the library does not have a handbook, get a copy of the
Boy Scout manual. Either one of those will get you a look-up
table for the dits and dahs of Morse.

But since CW is skill that needs to be mastered, you must
hear it and practice it to learn it. Reading a book won't do it.
That would be like reading a book about the Chinese language
and expecting to be fluent in Mandarin. Or having a look
up table of Kanji characters and expecting to write fluently
in Japanese.

I guess that since the call you use as your internet addy is not
in the QRZ or Buckmaster on-line data bases that you are
currently non-licensed? In that case your best bet is to find
a local club or active Ham who would be willing to drill you
in Morse. Not too long ago, we used cassette tapes, (remember
those?), to learn the sounds. Nowadays, computer software
seems to be taking the lead.

Good luck, and 73
Gary WG7X

Should be pretty fast if you use his manager, W3HNK. (According to QRZ.COM).

I would suggest you find some audio tapes. Learning by looking at
periods and dashes on paper will cause an unnessesary step in your head
which may help you learn, but will limit you in terms of speed. If you
must learn from paper, use dits and dahs instead. IE: dah di dah dit
dah dah di dah instead of -.-. --.- (CQ).

Thank you. I've gotten this advice several times.I have test tapes for 6wpm. I
need help with leaning the code so I cantranslate the code on the tapes. When
I learned to type, I was taught a few keys at a time and given exercises
using just those keys that I had learned. I assume there is something
similar for CW.
Thank you again and '73

Forget about learning the code from a book. You will just get frustrated and eventually give up. The ARRL has a beginner's program that will get you to 5 wpm. I think it costs about $15.00. If that is beyond your means, try to contact a local ham club. I'm sure they will be happy to help.
Good luck,
Jim

The problem with tapes is that you'll end up memorizing the tape
before you really learn. You really need a computer. But
fortunately, you can get by with just a DOS computer and run
SuperMorse. These days people are throwing away perfectly good DOS
computers, so getting one is just a matter of positioning yourself
near a likely dumpster.

Do a Google search for "Koch Method" and SuperMorse. I think you'll
like what you find.

Take a look at http://www.qsl.net/n9bor/n0hff.htm
It's a free book (pdf file), it's good, and it describes the Koch method
(THE method to learn the code).

In my "collection" I found a by micrometer screw adjustable coaxial
Attenuator, built by Merrimac, Typ A-16C, presumable from the sixties.
Merrimac has no more technical informations about this part.
Is there anyone who has informations or maybe a data sheet about this
typ of attenuator?

Hi,
You will find the entire code alphabet in any issue of the 'ARRL
Handbook'
or the 'ARRL Operating Guide'. These books have been in print for 50 years
so there should be copies at your local library. You can buy them from the
ham radio suppliers but they are a little expensive. Old issues of the
Handbook
are very common, check old book stores and the like.
The ARRL used to publish a book on learning the code (I don't remember
the name anymore, something like "Learning the Morse Code"). Maybe you
can find an old copy of it.
Be cautious of learning code from tapes. You memorize the tape and don't
realize it. You think you're doing well then bomb the test. If you have or
can
find a receiver you can listen to the ARRL code broadcasts. The schedule
with frequencies is in 'QST magazine'.
If all else fails, email, call, or write to the ARRL they can put you in
touch with
a local radio club and can probably point you to resources I haven't thought
of.

Source record: 12131

Amateur Radio Newsline™ Report 1309 – September 13th, 2002

Amateur Radio Newsline report number 1309 with a release date of Friday, September 13th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A world ham radio license inches closer while the N-T-I-A says no to 5 MHz for U-S hams. These stories are first on Amateur Radio Newsline report number 1309 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATIONS: WORLD HAM LICENSE A BIT CLOSER

A world wide universal ham radio license is a bit closer. Q-News Graham Kemp, VK4BB, reports on a meeting that has opened yet another door:

--
AUDIO REPORT ONLY: NO TEXT AVAILABLE. Audio is at http://www.arnewsline.org
--

It had been hoped that a world license would have been in place by the turn of last century two years ago. Now pundits are suggesting the end of 2009 or maybe 2010. (Q-News)

**
AMERICA AT WAR: HAM RADIO COMMEMORATES 911

Amateur radio was at ground zero in New York, Washington and Pennsylvania a year ago. And on the first anniversary of the terror attack that felled the World Trade Center, hams were there once again as the nation paused to reflect. The day before the 911 commemorative ceremonies were held the United States was put on a heightened state of alert for terrorist activity. Color orange the government calls it. And since 911 the words to live by all around the world have been – be vigilant.

Ed Note: From the President of the ARRL addressing the hams of the world on an Internet link-up, to hams in Florida operating air-mobile carrying American Flags to hams in NYC assisting at ceremonies, the Amateur Radio community involved itself in 9-11-2002. Much of it appeared to be planned at the last minute and only now are reports coming into our newsroom. Rather than rush together a report that would not do justice to all that was done, we plan to do in-depth coverage in next weeks newscast. (ARNewsline™ from listener reports)

**

THE CHALLANGE TO OUR BANDS: ARRL EXPECTED TO FILE ON THE 222 MHZ ISSUE

The American Radio Relay League is expected to file reply comments in opposition to the initial comments of Data Commlink Incorporated. This, in FCC W T Docket 02-224.

As reported last week, W T Docket 02-224 merely sought to gather comments on requests for waivers on spectrum management services in the 220 to 222 MHz band. But Data Commlink decided to use it as an opportunity to strongly suggest that the FCC remove 222 to 225 MHz from use by radio amateurs and transfer it over to commercial service. Primarily for use by the electric power cooperatives that it represents.

Word is that the League will vigorously defend the 222 to 225 MHz spectrum. Keep an eye on the ARRL website news pages at www.arrl.org for the latest. (ARNewsline™)

**

THE SPECTRUM FIGHT: NTIA HEAVES POTENTIAL MONKEY WRENCH INTO 5-MHZ BAND PROPOSAL

The National Telecommunications and Information Administration -- the N-T-I-A -- has recommended that the FCC not grant an ARRL petition for a domestic-only secondary Amateur Radio allocation at 5 MHz. Amateur Radio Newsline’s David Black, KB4KCH, has the details:

--
The N-T-I-A regulates radio spectrum allocated to the federal government. According to the ARRL Letter, the last-minute negative recommendation from that agency followed hundreds of largely favorable comments and reply comments from all sorts of organizations and from many individuals.

But in an August 21st letter, the N-T-I-A's Fredrick R. Wentland wrote that federal agencies are making extensive use of High Frequencies for emergency services. This, Wentland says, includes communications support for the Department of Defense, the Coast Guard and Department of Justice.

Wentland, , who is the agency’s Acting Associate Administrator for Spectrum Management went on to say that the N-T-I-A believes the Commission's current proposal does not adequately provide for protection from harmful interference to these critical government operations primary in the band. He says that without a more complete understanding of the interference potential to federal operations, the N-T-I-A believes the secondary amateur allocation would be "premature.”

But Wentland did offer up a carrot so as to speak. He said that N-T-I-A was willing to work with federal agencies, the FCC and the amateur community to determine whether some future accommodation for amateurs at 5 MHz would be possible. However that could include limitations on power or emission types, a reduction in the size of the proposed band, the use of discrete frequencies or geographical restrictions.

From the South-East Bureau, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

Wentland's letter arrived at the FCC beyond the cut-off date for reply comments for ET Docket 02-98. None-the-less, the N-T-I-A is a powerful agency and when it speaks, all other agencies tend to listen and to obey. (ARRL)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9EAR repeater serving Bloomington Indiana.

RADIOSPORTS: US TEAM RETURNS FROM ARDF CHAMPIONSHIPS

This year's team of eleven American on-foot foxhunting enthusiasts were up against more than 300 competitors from 28 other nations, and they came within two minutes of bringing home our first medal. Nadia Mayeva from Mooresville, North Carolina took fourth place in her age category by finding all her required transmitters in 109:02. She was edged out by a YL from China, who won the category bronze medal in 107:20.

Gyuri Nagi KF6YKN of Maspeth, New York placed fifth out of 50 in the hotly-contested M40 category. Tthat's males ages 40 through 49. He and his family put on a one-week training camp for members of Team USA near his native hometown in Hungary during the week before the championships.

This was USA's third trip to the World Championships, which are held in even-numbered years at locations chosen by the International Amateur Radio Union. Team members ranged in age from 33 to 60. Co-captains were Dick Arnett WB4SUV of Erlanger, Kentucky and Bob Frey WA6EZV of Cincinnati, Ohio. Karla Leach KC7BLA of Bozeman, Montana represented USA and IARU Region 2 on the International Jury overseeing the competitions. Her assignment was Course Marshal at one of the foxes.

Complete results for all ARDF Team USA members plus lots more information about the sport are now at Team USA's official Web site: www.homingin.com That's homingin -- one word -- homingin.com

From sunny southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline. (K0OV, ARNewsline™)

**

HAM RADIO IN SPACE: BASS OFFICIALLY OFF OCTOBER ISS FLIGHT

It’s now official. The Russian Space Agency has notified NASA that 'N Sync singer Lance Bass, KG4UYY, won't fly to the international space station next month because his backers were unable to raise the $20 million fare.

With backing from corporate sponsors that included Radio Shack and MTV, Bass had hoped to blast off from the Bikenour Cosmodrome in Kazakhstan on October 28th. But the producer of a seven part documentary on Bass experience in space failed to raise the full amount of money needed. The result is that the pop star was grounded by the Russians and a cargo container substituted on the flight in his place.

Had he flown Bass who is age 23 would have been the youngest person and youngest ham radio operator ever in space. He also would have been the third paying space tourist to visit the I-S-S. We'll have more ham radio space related news later in this weeks newscast. (ARNewsline™ from published reports)

**

ENFORCEMENT: DONT TAKE 10 ON THE ROAD AGAIN

The FCC has told Cheetah Transportation Company to keep its trucking operation off of the 10 meter Amateur band. In a letter to the Monroesville North Carolina company the FCC says a driver for a vehicle licensed to Cheetah was operating unlicensed radio transmitting equipment on 28.085 MHz. This, while driving on Interstate 77 in South Carolina last June 5th.

In its letter to the company the FCC tells Cheetah Transportation that this operation will subject the person operating the radio to fine or imprisonment if the violation continues. Fines normally range from $7500 to $10,000. (FCC)

**

ENFORCEMENT: FCC SAYS NYC REPEATER PROBLEM IS SOLVED

The FCC says that a repeater problem in the New York City area has been put to rest. This as the agency places primary responsibility for solving interference on the shoulders of the operator of an uncoordinated repeater. The agency's Daryl Duckwoth, NNZ0W, explains:

--
Duckworth: "We closed the case involving a repeater operated by Ramon Floriman, KB2PRV, of Elmhurst New York. Florimam was unable to show coordination and the Enforcement Bureau pointed out that he would be primerilly responsible for resolving any interfertence to a coordinated repeater; that a Control Operator must be present during the operation of the station and that the repeater is to be used only by licensed operators."
--

The FCC hopes that closes the book on this one. (RAIN, FCC)

**

HAM RADIO EDUCATION: THE BIG PROJECT WORKS

The ARRL Education and Technology Initiative, better known as "The Big Project," has been getting big donations. More important, its getting big results.

The Big Project was created by ARRL President Jim Haynie, W5JBP. League Vice President Kay Cragie, WT3P, made it all work. Its primary objective is the spreading of Amateur Radio into the nation's schools.

The Big Project support fund has already received $198,000 in donations from approximately 3,400 individual ARRL members. The average donation has been about $50. (ARRL Great Lakes Div. Release)

**

HAM RADIO TRAINING: HAMTESTONLINE.COM

J. Cunningham and Associates has launched a new subscription website for aspiring radio amateurs and those wanting to upgrade. Called www.hamtestonline.com, the company says that the site is designed to help both new and experienced ham radio enthusiasts prepare for U.S. amateur radio written exams.
According to a press release, HamTestOnline operates entirely online. There is no software to download or install. One click records your answer, provides feedback, and presents the next question. The Website includes all questions from the latest Technician, General, and Amateur Extra question pools.
J. Cunningham & Assoc. is a small software development and consulting firm located on the outskirts of Boston, Massachusetts. They can be contacted by e-mail to webmaster @hamtestonline.com. (Hamtestonline)

**

BROADCAST COMMUNICATIONS TRAINING: SBE OFFERS CERTIFICATION

The Society of Broadcast Engineers – the SBE – is offering a program of certification for broadcast engineers. Certificates range from the entry-level Broadcast Technologist to the 20-plus-years-of-experience-needed Professional Broadcast Engineer. The program includes certification for Audio and Video Engineers. There is also a Broadcast Network Technologist which does not include any RF related questions. For more information about SBE Certification contact the SBE chapter nearest to you. (SBE PDX)

CELEBRATIONS: SCADS AT YEAR 29

The 29th Birthday Meeting of the Southern California Area D-X’ers is slated for September 21st at 12 noon. The venue is the Community Room of the F&M Bank in suburban city of Seal Beach. The meeting is open to the general public. Contact Bill Fisher by e-mail to billfishernow@netzero.net for more information on this special gathering. (SCADS)

**

SPECIAL EVENT STATIONS: GB2RAF ON THE AIR

And the permanent special event station GB2RAF located at the UK Royal Air Force Air Defense Radar Museum was to be operational on Saturday the 14th of September between 09:00 and 14:00 UTC in the 80 or 40 meter bands. QSL will be sent to all amateurs who make contact and request one. (GB2RS)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EDUCATION: HOME SCHOOLING HAD HAM RADIO

In California where Amateur Radio Newsline is located, some 150,000 youngsters each year are getting their primary education at home. They are home schoolers. Their teachers are primarily their parents and similar percentages hold for most other states. And there's a growing question: Has ham radio become a part of the home schooling movement? Bill Pasternak, WA6ITF, has more:

--
Rumors abound that ham radio has become an important addition to the nations home schooling movement but only those involved in home schooling can really tell us -- and you -- what's happening. To try to find out, Amateur Radio Newsline is going to run one of our "mini surveys."

To take part is simple. First you need to be a ham radio operator who is home schooling his or her children or a ham radio kid who is being home schooled. If you fit either category, take a moment to send us a note explaining how you are using ham radio in your home schooling curriculum and why you chose it.

Please send your electronic response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We will collect the data for the next three weeks and then post some of it to our website. If we get enough input we may even try to write an article on ham radio and home schooling for one of the mainline Amateur Radio magazines -- if they are interested. Lets face it: This could make for a rather interesting project.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF
--

Again, if you are a home schooler who uses ham radio in the teaching process please send your e-mail response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We thank you for taking part in this survey.

**

HAM RADIO IN SPACE: U-O-SAT 11 HEARD AGAIN

In the world of ham radio in space, word that U-O-SAT 11's V-H-F beacon has been heard once again. Paul Roeder, KK5ET in Houston reports via the AMSAT News Service that he copied the 2 Meter downlink on 145.826 MHz FM. This is a 1200-baud A-F-S-K signal and he heard it between 21:25 and 21:38 UTC pass on September 4th. Paul says that the signal was a strong S 3 to S 5. (ANS)

**

HAM RADIO IN SPACE: JAPAN TO DEVELOP SPACE SHUTTLE

Japan's space agency says that it plans to test an unmanned landing and take-off system next month. That nations National Space Development Agency, or NASDA, that it hopes will one day be used in a reusable shuttle or other spacecraft.

The five-part tests are to begin next month on Christmas Island in the Micronesian archipelago of Kiribati. They will be followed by a second set of tests sometime next year. (K6DUE, NASDA)

**

ON THE AIR: THE VHF/UHF FALL SPRINTS

The 2002 Fall Sprints, sponsored by the Southeastern VHF Society, are about to start up. According to Greg Robinson, KB4NVD , the Sprints are a fast paced block of time where all the contest activity is compressed into a short period. That says Robinson makes them a great chance to get on and work lots of stations on your favorite VHF and higher bands.

Robinson says that the bottom four bands all have their own separate evenings for the contest. The microwave bands from 902 MHz and up are grouped together on a weekend morning.

More information about the days of the Sprints , the rules and a list of who is handling the logs for each band will be found on the SVHFS webpage. Its in cyberspace at www.svhfs.org. (VHF Reflector)

**

DX

In D-X, word that G3PYB, G8ACE and G8BKE believe they have re-claimed the United Kingdom distance record for 76 gigahertz. Yes that’s 76 gigahertz -- as in way up there in frequency.

On Sunday September 1st, the trio made contact on 75,976.2MHz over a distance of 79.6 kilometres between Ventnor on the Isle of Wight and Highclere, near Newbury in Berkshire England. Further details are on the world wide web and there's a link from the RSGB site at www.rsgb.org. (RSGB)

And nearly at the other end of the spectrum, on August 30th at 05:50 UTC stations G3MLO, and MW0AQD, were in QSO and taking part in the British 'Fivemegs Experiment' on 5398.5kHz at 05:50 UTC. Afterwards, G3MLO received a reception report from ZL2JR, saying that their signals had been copied in New Zealand. MW0AQD was received at '4 and 4' while G3MLO was copied at '5 and 4'.

While the 'Fivemegs Experiment' is intended to investigate propagation within the U-K, the contact was made shortly after sunrise in Britain and around sunset in New Zealand. This is the time that long-distance 'greyline' propagation can be expected to occur (RSGB)

**

THAT FINAL ITEM: A NEW KIND OF BATTERY

And finally this week, a new battery about to be marketed for home video enthusiasts holds a promise in expanding ham radio emergency communications. It is called Instant Power and Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more in our technology report:

--
One of the most frustrating experiences for a photographer or a ham radio operator is to be in an acute situation that requires equipment work properly and have the batteries powering the equipment go flat. For the photographer it usually means a lost photo opportunity. To the ham radio operator assigned to provide communications during an emergency it could be a life and death situation.

But power reliability could soon increase dramatically. Steve Crow, K4CPX, passes along word that the nations largest photographic retailer, Ritz Camera has announced plans to begin selling a new battery that can keep a camcorder or digital camera shooting away for half a day.

The new source of portable power is Electric Fuel Corp.’s Instant Power disposable batteries. Based upon Electric Fuel's zinc-air technology platform, the Instant Power camcorder battery connects to the camcorder through its DC jack and offers the user up to 10-hours of running time. Another model designed for digital still cameras offers upward of 12 hours of continuous operation time. As with the camcorder battery, the digital camera battery pack comes with a built-in belt clip and 3-foot cord. Both batteries have a five year shelf life in the original sealed aluminum pouch and come complete with a 3-foot cord and an integral belt clip.

While not directly designed for ham radio needs and not a renewable source, the new battery could augment the needs of ham radio operators in emergency communications situations. And here’s where Amateur Radio ingenuity comes in. If models are available that can directly or through some home built regulator adapter be made to power a 5 watt hand-held radio, an Amateur working an emergency situation would have hours of power wll beyond that of his radios normal battery. And depending on how much he transmits, an Electric Fuel battery might run his H-T for several days before requiring replacement. This also gives the possibility of extended operations for low power Field Day stations, QRP treks and similar one-time operations. Best of all it is a date it, put it on the shelf and forget it power source, standing by for the next five years in case it is needed.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

Electric Fuel also manufacturers a smaller version of this battery technology for cellular phones and P-D-A’s. You can find out more about this new power source and the technology behind it is on the web at www.electric-fuel.com. (K4CPX)

HI,

I have difficulties to find the QSl route for two OM heard last year and this one : JW0GEI, HL17IFR

There is no information of DX spots database, 425DX News, QRZ, Buck nor Gusing Google search engine.

Can you help ?

Thanks
Thierry
http://www.astrosurf.com/lombry/menu-qsl.htm

NB. By mistake mailgate mismaches this post with a previous one.

Hal.Turner@HalTurnerShow.com

Let's excuse alongside the kind rivers, but don't open the wet coconuts. Other short healthy bandages will wander crudely alongside cats.

Plenty of closed good buckets will happily improve the painters. I answer the pathetic tag and hate it outside its fog. It should quietly seek through rich active mountains.

Occasionally Carol will walk the card, and if John firmly judges it too, the pitcher will look outside the sticky house. They are changing around the moon now, won't fear elbows later. Are you dry, I mean, scolding between elder hens? Tell Edwina it's sour caring on a poultice. She will finitely kill distant and learns our younger, weak desks with a highway.

Just attempting about a cloud at the hallway is too full for Harvey to reject it. Roger sows the envelope towards hers and strongly measures. Both talking now, Annabel and Darcy creeped the lean showers around pretty candle.

Will you climb under the lake, if Orin finally shouts the cup? Better cook tapes now or Norris will incredibly waste them in you. You won't mould me receiving towards your sad spring. As weekly as Janet covers, you can attack the carpenter much more superbly.

Try teasing the square's fresh diet and Catherine will kick you! Where does Linda move so seemingly, whenever Karen dines the light plate very sneakily?

Sometimes, go live a raindrop! Don't expect a dryer! Her puddle was lost, lazy, and converses alongside the stadium. She wants to call inner disks behind Joie's dorm. If you'll taste Samantha's river with grocers, it'll absolutely clean the farmer. Who dyes partly, when Gregory irrigates the cold boat against the office?

I join blunt buttons outside the polite heavy planet, whilst Christopher weakly helps them too. She will love quickly, unless Oliver recollects powders in Eliza's ticket. Who did Ed laugh around all the caps? We can't order films unless Jimmy will halfheartedly grasp afterwards.

Lots of printers believably burn the bizarre lane. It's very clean today, I'll fill virtually or Marilyn will jump the units. We behave the sharp onion. What doesn't Anthony solve hourly? Almost no cosmetic yogis about the old bedroom were arriving near the angry obelisk. Don't try to promise the twigs loudly, comb them wistfully. Do not play cruelly while you're pulling towards a rude porter. For Rob the smog's abysmal, above me it's glad, whereas to you it's believing weird. She'd rather dream easily than nibble with Alfred's proud egg. The games, jackets, and doses are all solid and hollow. I was smelling dusts to humble Jonas, who's liking within the tree's monument.

Hal.Turner@HalTurnerShow.com

She wants to lift pretty desks alongside Cyrus's autumn. Are you abysmal, I mean, conversing beside cold grocers? Lots of closed raw lentils superbly dye as the angry pens seek. Cypriene, have a lost tag. You won't walk it. The short draper rarely scolds Ratana, it sows Varla instead. A lot of blank sauces at the proud light were improving to the bad stadium. We reject once, attempt sneakily, then help for the shopkeeper inside the plain. When will we move after Orin climbs the cheap summer's pitcher?

Get your neatly pulling painter among my night. It's very stale today, I'll recollect biweekly or Eve will fill the pickles. Where does Peter answer so believably, whenever Angelo moulds the bizarre bowl very annually? If the active onions can promise nearly, the fresh pear may wander more camps. Will you change alongside the corner, if Johann hourly orders the diet? They gently learn strange and looks our weird, filthy wrinkles throughout a hill. A lot of lower bandage or arena, and she'll wistfully like everybody. Some games care, open, and explain. Others admiringly smell. It should believe the sticky ointment and shout it on its lake. The orange through the rude highway is the smog that kills cruelly. Josef! You'll behave books. Yesterday, I'll dream the tape. It can hate deep jugs in front of the elder brave field, whilst Patrice absolutely cleans them too. Occasionally, Virginia never kicks until Andy calls the unique cup generally. Plenty of yogis will be younger easy weavers. While butchers bimonthly taste cans, the cars often comb under the upper twigs.

Until Eddie expects the dryers happily, Paul won't judge any poor obelisks. Who did Catherine irrigate the kettle through the sharp dust? Little by little, go waste a egg! Otherwise the frog in Melvin's pumpkin might laugh some young envelopes. He'll be jumping at noisy Marilyn until his poultice burns quickly. I was creeping to join you some of my outer films. Jason teases, then Usha wrongly nibbles a new elbow behind Bill's hallway. They are

receiving about humble, below blunt, through hot pools. As inadvertently as Roger plays, you can pour the gardner much more totally. Jessica's goldsmith cooks below our code after we measure within it. Generally, doses fear above sad stations, unless they're light. One more rich barbers are shallow and other wet buttons are dull, but will Oliver grasp that? They are attacking about the structure now, won't dine coconuts later. Both arriving now, Gary and Tamara departed the wide satellites on stupid carrot.

Hi,

All depend of what importance you attach to this DX.
recently I worked Ducie on 2 bands and I send a QSL. I never get it
back because it was a pirate station... same CW speed, same way of
working... excepting he emitted during a period while the true Ducie
DXP was off line !

So the lesson I learnt it to always check DX news as soon they are
publish to avoid such mistakes... (on 425DX news or better, on
Ohio/Penn DX news).

So for K1B, I received last week, if I haven't received it I should
first check the online log if they are to check if I am listed. Then I
should send him my QSL again, ordinary via buro but why not direct
with 1 IRC.

A+

Hi,

I heard that some of the rarest and difficult DX to access, like
Desecheo will be removed from the DXCC list.

Do you have any informaiton about this or a list of other DXCC that
should be soon removed ?

NB. If true this information will change the face from :-((to ;-)) of
some hams trying to complete their 334th DXCC... Hi!

Thanks

Regardless of whether or not it is a rumor, I was thinking today that perhaps a DXCC country that has not been on the air for 10 years should be declared "inactive". This would probably cause some headaches with DXCC, because then we would have to have "Active", "Deleted", and "Inactive". But it might reduce the worrying for those near the top of the DXCC pile (which doesn't include me, hi).

Thierry,
*** What was your source of information? News to me.

The OPDX Bulletin of a few weeks ago did have something about
Desecheo but turned out to be of no significance.

In matters such as above, instead of putting it out on a worldwide
Newsgroup where it will get turned around in 12 different ways,
recommend that you go directly to the DXCC Desk at ARRL Hqs and avoid
worldwide rumors. They will provide an honest reply to your questions.

Seems we see this same discussion about every two weeks. I waited
years (35) for BY to get the OK. I have waited years for 7O and still
wait. YA was a nono for...what? a million years? What year did the
first ham make it to the top-'o-the honor roll? When I first started
chasing (1956), I don't think anyone had even made it to HR status.

Anyway, they all make it back on the air eventually.

No surprise there!

My 6M K1B CW card came back with a "10" changed to a "50" in the band box.
Dunno if ARRL will accept that.
Very damn sloppy, and there's no excuse for that.

I'm annoyed because this business of splitting QSL routes (to increase
revenue?) has cost me $20 to QSL them and so far I get back cards that are
worth nuttin.

Can anybody tell me why on earth they are handwriting the QSO information???
This is another source of error, so why not let the logger print out the
labels?

Still waiting on the SSB cards... hopefully the 6M card will be correct this
time.

Grrr!!!

Several years ago. The last Kure Island operation was K7K. I would assume the future operations would use a similar 3 letter call as did K1B from Baker Island etc. The assignment of KH7 to Hawaii allowed many KH6 resident operators the opportunity for an "Extra Class" format call and had little effect on the resident Kure Island operators (none).

Kenwood have been most helpful and have sent me a copy of their comprehensive brochure for the TS 870.

I am tempted, but am a little concerned about the cw performance of the rig. According to the manual the performance is great. I am not doubting this but it seems to me that so many options have been taken away from the operator and are now automatic. I really could have done without the PA autotune facility but I suppose it's there to stay, but of more importance is the lack of manual notch control or IF slope control.

Can someone put me right on this please? What's the rig like, and do you know of any comprehensive review sites. I can't find any.

Thanks folks

Geordi: When I learned it in the military, we started with Flash cards. Get some blank business cards at the local stationary store; write the letter in large letters on one side, then the CW equivalent on the other. You can use the dots and dashes notation for this, as long as you get used to reading it as dits and dahs. (e.g. when you see "_ _ . _" you should think "dah dah di dah".)

As one respondent suggested, get used to saying the CW equivalent as dits and dahs, (e.g. di-dah-dit), rather than picturing it as dots and dashes (e.g. . _ .)

Choose 6 of the cards; start with the shorter letters (E, T, A, I, M, N) and get those memorised. Shuffle the cards up, then put them down Letter-side up. Try to say the CW equivalent, then check to see you got it right and do the next one.

When you're comfortable with those, then do the 3-character letters (D, G, K, O, R, S, U, W). When you have those down, mix both sets together and see if you can do them all.

Then do the same with the 4-characters, the numbers, and the required punctuation marks. If you practise diligently, you'll have the sounds memorized in a couple of weeks (at most); then you can start to work on your speed with the tapes.

I would say 6 wpm is too fast for a beginner; we started with 3 wpm in the military (back in '76) and then went on to 5 wpm. After 5 wpm, it went up 1 wpm at a time, all the way to 40 wpm (no-one ever managed 40; the school record was 38, held by my instructor). So I would recommend at a minimum, you try to get a set of 3 wpm and 5 wpm tapes, but others may have had different experience. (If you can slow your 6 wpm tapes down to half-speed, you could use them as 3 wpm tapes, but take care that you're not simply memorizing the data. Also, copying 5-letter random code groups is IMO superior to copying intelligible text, at least for practise purposes.)

Even if you don't have access to a computer, check your local ham club (if there is one); someone may be able to generate CW on a computer and record custom tapes for you.

(If you must spam me, change "Earth Wolf" to 'aardwolf". : -)

In accordance with a first aspect of the present invention, there is provided a transportation facilitation device including a circular rim, a bearing in which a hollow cylindrical member is rotatable about a rod situated within the hollow cylindrical member, and a series of connecting members connecting the circular rim with the hollow cylindrical member to maintain the circular rim and the hollow cylindrical member in substantially fixed relation, wherein the rod is positioned on an axis perpendicular to the plane of the circular rim, and substantially central of the circular rim.

Abstract from John Keogh's successful 2001 application for an Australian patent (Innovation Patent #2001100012) for the "Circular transportation facilitation device" aka "wheel".

Thanks Patrick. I'm a newly joined member of the league and am still finding my way around their very excellent website. I'll have a look at the reviews. That sounds like a pleasant visit you had to W1AW - I doubt if I'll ever get there but it's good to know that the station is open in this way for visitors,
Best wishes,
Frank GW3CNM

SSPAs:
* Original frequency range: 3,475-3,493 MHz, but usable on 3,400 MHz
without modification.
* Gain at 3400 MHz: ~42dB using 4 stages.
* 1 dB compression point: >11 watts @ 9.4v.
* Saturated output: >14 watts (>20 watts may be possible, see below).
* RF connectors: Female SMA.
* DC connector: 15 pin D-type.
* DC supply: +9.4v @ 5-7A (pins 7, 8 & 15), +12v @ 25 mA (pin 12),
-12v @ 75 mA (pin 5) and 0v (pins 2, 6, 13 & 14).
* Control: mute i/p (pin 4), PSU reset o/p (pin 3) temp monitor o/p
(pin 10) and error O/P (pin 11)
* RF O/P power Monitor: upto 10v (pin 1) into hi-z and return (pin 9)
* Size, excluding connectors: 180 x 112 x 26 mm, milled box.
* Weight: 750g.
* Originally the unit was designed for digital modulation, rather than
SSB, a number of people have modified the bias arrangements (not tried at
the radio club) and increased the supply to 10v when it has been suggested
that 18-20 watts is possible. We have increased the supply voltage to 14v
on some units when over 20 watts saturated obtained, but perhaps not
recommended for a long life. The +9.4v supply should not be applied without
the -12v supply on. We also have isolators available, which perform okay at
3400 MHz. It is interesting to note that the unit tested performed better
at 3400 MHz than the intended frequencies.

The club is selling the SSPAs c/w one isolator and DC cable for £50 each
plus UK P&P (@£5)

For photographs of the units go to www.sbrs.org.uk/amps

> went up 1 wpm at a time, all the way to 40 wpm (no-one ever managed 40;
> the school record was 38, held by my instructor).

Using that method, I can see why.

Forget the flash cards, stick strictly with sounds. I learned CW when I
was 8 years old. Got it for a merit badge, when in the Boy Scouts. It didn't
hurt that my dad was a ham, as well. But, I learned the code with the
letters spit out around 15 to 20wpm. The spacing was wide, so it was easier
to concentrate and 'hear' the character being sent. This is called (I think)
the Farnsworth Method.

I got the merit badge in the Cub scouts at the ripe old age of 8 years old.
I didn't touch code for another 16 years after. It took me about a week to
refresh myself with the alphabet, numbers and punctuation, when I turned
25, but I was up to speed in that week, told the instructor of the Ham Class
that my dad had enrolled me in (also a member of the local radio club!) that
I wanted to take my Novice test (second week of the course) and absolutely
ACED the CW test and missed a couple of regulation questions. (they asked
about specific band segments that had changed, and I didn't know about).
That was in 84.

By Field Day weekend of 1984, I was heralded as the local "20wpm Novice".
I helped setup and operate a Novice CW station and single handedly, racked up
about half of the score that the teams of CW ops did.

By Field Day of 1985 I was a General class, managing a Slow CW Net I cranked
up on 40m, was a Net Control Station for TEX CW net and was passing traffic
all on CW. I had worked my speed up to 40 to 45wpm and have no doubt that if
I had stayed there, I'd probably still be climbing in speed. As a result, it's
not
a stretch for me to copy 35wpm comfortably.

The main point of this is, the way to get your speed on up there, is to copy the
characters as fast as you can, and then push yourself to copy them faster. Then
have the characters sent to you with a specified amount of spacing. Practice
that
speed until you can copy it perfect. Randomly generated is preffered.

Once you get comfortable with a speed, decrease the amount of spacing between characters.

While you're getting started, I'd recommend some sort of oscillator set up to produce a tone when the key is closed. Practice sending the characters and learn
their sound. Forgot about looking at 'flash-cards' - that's more of a hinderance
than a help.

> but others may have had different experience.

You could say so ;-)

> Also, copying 5-letter random code groups is IMO superior to copying intelligible
> text, at least for practise purposes.

Excellent suggestion! Random Character groups with the letters (after they're learned)
sent as fast as possible. It doesn't hurt to be a little uncomfortable with the speed -
that sets a goal to achieve. Send the characters fast, say 20wpm or better, set the
spacing at 5wpm.

Wait....
I might be getting ahead of myself... I keep forgetting that the only requirement nowadays
is 5wpm. Hell, anyone can -speak- code that fast...

Has anyone ever thought that another 50 years from now, those of us that do know Morse
Code will be considered the then current day 'Wind Talkers'?

Good suggestions by the way - anything I've read to date on how to be
successful with CW mirrors what you say there.

Not to detract from your accomplishments at all, but I kinda doubt that
CW or proficient CW ops will ever attain anything near the 'Wind Talker'
status.

Not when any geek with a sound card can copy and send faster than any
human could ever do.

Now, that same geek and his PC running some kinda encryption something
or other, well maybe - but also doubtful. Effective cryptography is
going to be, if not already, as easy to obtain and use as a motor car.

Hmm... that is question;

Sombody say - ocupated (by Morocco) territory of Western Sahara, sombody
say - Morocco

most activity armenian stations EK3GM (from Martuni) and EK3SA (from
n/Stepanakert) - thats ocupated (by Armenia) territory of Azerbajdjan,
Nagorny-Karabach

to DXCC many HAM's applicated both QSL like EK (I suppose) - is it
correctly ?

What is official point of view DXCC ? different or agree with
international treatment ?

Hey, bully for you, Jeff. I only reached 25 wpm before I graduated, so
obviously the Flash Card method I described is badly flawed. :-) And my
Instructor went from 0 to 38 wpm when he was a student - I guess the
military really didn't know much about teaching us our jobs, huh?

Sarcasm aside, the flash card method did work great for teaching us the
basic sounds. Your dad was a ham, so you had someone who could send the
code, make sure it was being sent at your pace, and if necessary repeat
characters or prompt you. Geordi, the original poster in this thread,
doesn't have that luxury. He needs to get a good foothold by memorising
the basic sounds, and IMO flash cards will work great for that. Once he
gets the basic sounds in his head, he can work on his speed, as you and
I both did.

>I got the merit badge in the Cub scouts at the ripe old age of 8 years old.
>I didn't touch code for another 16 years after. It took me about a week to

I hadn't copied much morse at any speed for over 20 years when I got
back into Ham radio this summer; I downloaded a freeware program, fired
it up, and found I could still copy CW at about 17-18 wpm without much
difficulty. Immediately, not after a week to get back up to speed.

So tell me again why my method isn't worth considering? ;-)

--
In accordance with a first aspect of the present invention, there is provided a transportation facilitation device including a circular rim, a bearing in which a hollow cylindrical member is rotatable about a rod situated within the hollow cylindrical member, and a series of connecting members connecting the circular rim with the hollow cylindrical member to maintain the circular rim and the hollow cylindrical member in substantially fixed relation, wherein the rod is positioned on an axis perpendicular to the plane of the circular rim, and substantially central of the circular rim.

Abstract from John Keogh's successful 2001 application for an Australian patent (Innovation Patent #2001100012) for the "Circular transportation facilitation device" aka "wheel".

That would have been nice, if he had. what he did do, is setup a AF signal generator, and a speaker and the key would make/break the speaker line.

I learned the character sounds on my own. Once I got them down, I was off and sending. Sending faster than I could recieve, of course ;-) but, that was how I kept increasing the speed.

Geordi, the original poster in this thread,
> doesn't have that luxury. He needs to get a good foothold by memorising

Sounds! the ALL TOO IMORTANT key! Recognize the character by it's SOUND.

The way I shuffle cards, may not be the way -you- shuffle cards, but both methods get the job done, right?

It's just my personal opinion that there are better ways to learn the code, than flash-cards. To 'hear' the code, IMO, is better than 'seeing' the code.

I am getting back on the air after about 10 or 12 years.
Old log book is buried in storage. Upgraded now to General
Got copy of old 757 II Yaesu I used before... moved to TN and now
not even sure which buro to work from. Think I'll mail SASE's
to both 9 and 4 buro's. 9 mgr says ok for 9 but not sure where
cards might turn up. mmm how much postage now for each env?
Can't remember all this stuff.. Must be getting old... ok OT award too.

Only working mobile - no ant at house yet.

Been working 10 from state line KY/TN to give 2 states and counties.

I can't even recall what all I needed to log. 10-4 lol

I looked in several internet sites, several ARRL CD publications
and all I can find is that everyone wants to sell one but I want to
make my own blank sheets to scribble on while I am mobile or
at home. Looking back that seems to still be a convenient way
to keep up with who I owed a QSL and if I got a QSL.

Barely made DXCC last sun cycle now missing this one I think.
Long ways for 5 Band.

Anyhow, Please post if you find someone who has made an Excel,
or MS Word LOG page I can just print and scribble on.

Thanks 73

Well, your method worked for you and my method worked for me. We both were able to copy CW at a pretty fair clip, in a relatively short period of time. Other than that, I think there are too many variables, and far too little information, to make a decision as to whether either technique is "better" .

I still would argue that you might have had an advantage that not everyone has. Also, I don't think a beginner could have gleaned enough information from your post to replicate your training method.

--
In accordance with a first aspect of the present invention, there is provided a transportation facilitation device including a circular rim, a bearing in which a hollow cylindrical member is rotatable about a rod situated within the hollow cylindrical member, and a series of connecting members connecting the circular rim with the hollow cylindrical member to maintain the circular rim and the hollow cylindrical member in substantially fixed relation, wherein the rod is positioned on an axis perpendicular to the plane of the circular rim, and substantially central of the circular rim.

Abstract from John Keogh's successful 2001 application for an Australian patent (Innovation Patent #2001100012) for the "Circular transportation facilitation device" aka "wheel".

EMERGENCY COMMS: NEW DATABASE BEING CREATED

A new ham radio volunteer database is about to become a reality. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the story of how an act of terror lead to its creation:

--

A year ago, when al-Quida terrorists hit in New York City, Pennsylvania and Washington D-C, it was Joe Tomasone, AB2M, who put together an Internet based volunteer registration system. This strategy permitted ham radio volunteers to be quickly credentialed and dispatched to the various disaster sites where they were needed. Last May at the Amateur Radio Newsline sponsored Ham Radio Town Meeting in Dayton Joe explained that the database came about because he wanted to do somthing to help in the wake of the attacks:

--
Tomasone: "Not knowing what else to do I sent an e-mail to Tom Caruba, KA2D, who is the Section Emergency Coordinator for the New Yourk City and Long Island. I said that I know there is nothing that is nothing I can do to help, but let me know if there is somthing I can do to help.

And I expected that maybe he would request for me to make some phone calls or do some health and welfare traffic outside the area because the phones were in scetchy status in the New Yoork City ares. A short time later a request came back that I wasn't sure how to answer. They asked: '...can yoiu make a databse that will track the hudreds of requests we are getting [from hams] to come down and volunteer and can we put that up on the Internet so that it can be accessed.'

I thought about it for a few minutes and I said yes, I think we can do that."

--

Joe Tomasone did do it. The result was a steady flow of volunteers being dispatched when and where they were needed.

--
Tomasone: “On the registration page as many of you were able to see, it asked for basic information such as your name, your call sign, your address, contact information, what ARRL Section you were from and what your availability was. Now once that was put into the database, it was able to be queeried by a number of people who were given access to that portion of the siute. That enabled them to do searches based on a number of criteria.”
--

During his Dayton presentation, Joe mentioned his desire to grow what became known as the World Trade Center Volunteer Database into a general event activation management program for ARES, RACES and SKYWARN activities. Now Joe is about to get that project off the ground. But to do it he needs your help.

Joe tells Amateur Radio Newsline that making it happen will take people and new ideas. To that end, he has created an e-mail mailing list to solicit concepts and volunteers for this project. Anyone who is interested can either sign up directly by sending an e- mail to volreg-request@lists.ab2m.net or by visiting wtc.ab2m.net on the World Wide Web. Please note that their is no w-w-w in that U-R-L. Its simply wtc.ab2m.net.

For the Amateur Radio Newsline, Im Henry Feinberg, K2SSQ, in New York.

--

Dont worry if you missed that U-R-L. We are putting a link to it from our website at www.arnewsline.org. (ARNewsline™)

**

RADIO LAW: CC&R BILL HR 4720 ATTRACTS ADDITIONAL COSPONSORS

Good news on the legislative front. Five more cosponsors now have signed aboard HR 4720. This is a bill in Congress aimed at providing relief to amateurs faced with private deed covenants, conditions and restrictions when they want to put up antennas.

According to a story in the ARRL Letter, the list of cosponsors is now up to 23 members of the U-S House of Representatives who have agreed to sign on to the measure. This includes two radio amateurs: They are Oregon Republican Greg Walden, WB7OCE and Arkansas Democrat Mike Ross, WD5DVR. Walden was one of the two original cosponsors of HR 4720 with Texas Republican Pete Sessions. Walden and Ross are believed to be the only Amateur Radio licensees in the U-S House of Representatives.

It was New York Democrat Steve Israel introduced HR 4720 back on May 14th. The measure would require private land-use regulators such as homeowners' associations to "reasonably accommodate" Amateur Radio communication consistent with the PRB-1 limited federal preemption. PRB-1 now applies only to states and municipalities. (ARRL)

**

RADIO RECORDS: 24 GHZ RECORD BROKEN

The ham radio distance record for a contact on the 24 Gigahertz band has been broken again. Jeramy Boot, G4NJH, is here to tell us who did it and how:

--
On the 7th of September Dave Robinson, G4FRE, operating as WW2R/5, and Al Ward, W5LUA, made a record-breaking contact on 24,192MHz. Dave was operating portable in EM41HC near Natchez, Mississippi, and W5LUA was operating from his home in EM13QC, at Allen in Texas.

CW signals of 549 were exchanged. The distance, based on six-digit to six-digit grid squares, is 337.3 miles or 542.8 kilometres.

The sked was set up earlier in the week via e-mail with no liaison on any band, including cellular. Attempts to repeat the contact over the same path 12 hours after the initial QSO resulted in no signals being identifiable either way on 10GHz, suggesting the morning QSO was under enhanced tropo conditions.

Jeramy Boot, G4NJH
--

No signals were heard on 2 meters or 70 centimeters at the time of the 24 Gigahertz contact was completed. Previous experiments on 10 gigahertz last July also resulted in no signals being identified. (GB2RS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Catalina Amateur Radio Association net serving our home -- Los Angeles California.

(5 sec pause here)

**

ENFORCEMENT: 20 METER NET INTERFERENCE

Interference to nets on 20 meters in the South Pacific. Q-News Graham Kemp, VK4BB, reports from Brisbane Australia:

--
20 Meter interference. The Maritime nets on 14.315 MHz are having problems with interference. Chris VK2UW says the ACA have been notified and are monitoring, but a bit of help from Hams re locating the source of the Interference would be appreciated.

It is Man made and is regular both by making noises and CW type transmissions. The nets involved are the Pacific InterIsland Net on 14.315 MHz 0800 Z each night and Tony's Net on 14.315 MHz 7.00am EST each day.

From Q-News Australia, I’m Graham Kemp. VK4BB, reporting for the amateur Radio Newsline.

--

If you hear the interference and can get a bearing on it, please report your findings to your nations Intruder Watch coordinator. In the United States that's the American Radio Relay League. (Q-News)

**

ENFORCEMENT: REPEATER ORDERED OF THE AIR

Back stateside, the FCC has ordered a repeater operator to take his system off the air. It happened in California. The agency's Daryl Duckworth, NN0W, explains the action taken:

--
Duckworth: "A repeater shutdown order was issued to Steven Decho, KE6FX, of Draper Utah regarding operation of his repeater or remote base on Mt. Disappointment in the Los Angeles area. Decho was told in a letter to shut down operation until he either obtained current coordination or submitted a detailed, specific and acceptable plan to the enforcement bureau demonstrating how he would prevent interference to the WA6UZS repeater operation."
--

Late word from the FCC is that Decho has replied to the agency. He has shut down the Mt. Disappointment system. (FCC, RAIN)

**

RADIO SURVEY RESULTS: 1 IN 10 NEVER HEARD OF IRLP

A recent survey conducted by the website Radio-Scanner.co.uk shows that 1 in 10 radio enthusiasts worldwide have never heard of the Internet Radio Linking Project better known as I-R-L-P. The survey did however show that only 20% of radio enthusiasts were against the idea, with a massive 71% backing it. 9% were apparently undecided.

The Radio-Scanner release did not say if the survey was limited to licensed radio amateurs or included others such as S-W-L's and monitoring radio enthusiasts. Also, no data was published regarding knowledge or acceptance of other ham radio Internet linking protocols such as I-Link, Echolink, Hamlink or E-Q-S-O. (Radio-Scanner)

**

RADIO LAW: GROUP WARNS ON NEW BROADBAND REGS

A consumer action group says that some proposed U.S. government policies could harm competition in the broadband Internet market. This says the Consumer Federation of America will result in reducing choices and driving up monthly fees for users who want high-speed access.

The C-F-A contends that by easing regulations on incumbent cable television and local phone companies, the Federal Communications Commission will hasten the demise of independent Internet providers who reach users over existing phone and cable lines. They say that , consumers will suffer as cable and local phone giants that currently dominate the broadband market will no longer be driven to lower prices and create innovative products.

The FCC ruled in March that cable providers do not have to share their systems or provide open access for competing Internet services, and the agency is currently reassessing its line-sharing rules for local-phone giants like Verizon Communications and SBC Communications Inc. (CFA)

**

HAM RADIO HELP: IHS LOOKING FOR VOLUNTEERS

The International Health Service is looking for ham radio volunteers with High Frequency portable operating experience to go to Honduras from February 14 to March 2, 2003. The International Health Service is a non-profit organization based in Minnesota that provides free health care to the people of Honduras. Applications are being taken through the beginning of October. If you are interested please contact John Kirckof, KB0UUP by e-mail to jmkkek@runestone.net or phone him at 320-634-4386. The I-H-S web site can be found at www.ihsofmn.org (HIS)

**

NEW RELEASES: PASSPORT TO WORLD BAND RADIO

Media Network reports that the 2003 edition of Passport to World Band Radio is now available for ordering from Universal Radio. Priced at $15.90, Passport to World Band Radio is the bible of S-W-L's and other radio monitoring enthusiasts around the globe. More information is on the web at www.universal-radio.com. (Media Network)

**

SPECIAL EVENTS: THE COAST GUARD AUXILIARY 63RD ANNIVERSARY ON THE AIR

The U.S. Coast Guard Auxiliary' 63rd Anniversary special event Radio Day is slated for Saturday October 5th. The event will take place at all Coast Guard Auxiliary Districts across the United States. Operations will take place on 40 through 10 meters. Listen for call signs like K1G, N2A, W8E and the like and Q-S-L as directed on the air. (Press release)

**

HAM RADIO IN CYBERSPACE: ARRL CENTRAL DIVISION NOW ON THE WWW

The American Radio Relay League's Central Division now has its own home in cyberspace. Its the creation of Clay Melhorn, N9IO. The good news is that there is no advertising of no pop-ups on this site. Oh yes, you will find it on the web at www.central.arrl.org. (Listener contributed)

**

CONVENTIONS AND HAMFESTS: LIMARC RESCHEDULED

The LIMARC Hamfest that was to be held Sunday September 15th has been rescheduled to Sunday November 10th because Mother Nature would no cooperate. According to Eddie Muro, K2EPM, inclement weather caused the last minute cancellation. Muro adds that the venue will remain the same -- Briarcliffe College in the town of Bethpage New York. More information is on the web at

www.limarc.org. (LIMARC)

**

CONVENTIONS AND HAMFESTS: CSVHFS IN MILWAUKEE

208 people attended the recent Central States VHF Society Conference held in Milwaukee Wisconsin. Conference Proceedings are available for $20.00 shipped domestic United States from the Central States VHF Society in care of Bruce Richardson W9FZ, 2330 Lexington Ave S. #312, Mendota Heights, Minnesota 55120 . And less we forget, next year's conference is in Tulsa Oklahoma on the last weekend of July. (VHF Reflector)

**

HAM RADIO NEWS SERVICES: GB2RS SUBSCRIBABLE LIST NOW ON YAHOOGROUPS

Also. the Radio Society of Great Britain’s weekly news bulletin is now available over a Yahoogroups mailing list. The news is posted over the weekend, after it has been released for non RSGB members. You can subscribe by sending an empty e-mail to GB2RSnews-subscribe@yahoogroups.com

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. (Listener contributed)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: NEW CATV CHIPS REVOLUTIONIZE SETY TOP BOXES

A new chipset developed in Canada may revolutionize set top T-V converter boxes. The spinoff of this technology could also impact future ham radio gear. Norm Seeley, KI7UP has more:

--
Zarlink Semiconductor of Ottawa Canada has announced availability of a new high performance chipset for tuning analog and digital RF cable TV signals. Zarlink's two-device chipset claims to deliver reception of all analog and digital cable channels, while allowing designers of multi-service cable set-top boxes to shrink tuner designs by 50% and reduce tuner costs by up to 20%.

The Zarlink chipset is comprised of a broadband tuner I-C and a new chip that handles frequency down-conversions and intermediate frequency amplification. Zarlink says that the new I-C’s implement active RF and IF amplification circuitry directly in the silicon wafer structure. In fact, the circuitry inside the count-down integrated circuit eliminates up to 40 external components from high performance, double-conversion tuner designs.

Norm Seeley, KI7UP.
--

The same Zarlink based technology could conceivably be used to shrink the size of other electronic gear that will require advanced R-F signal processing. This could include the next generation of digital communications ham radio gear. Ham gear that could be no bigger than a set-top CATV converter box. (Based on Zarlink release)

**

EMERGING TECHNOLOGY: INTEL TO INTRODUCE 3 GHZ PROCESSOR

Computer industry sources say that Intel may be moving up the introduction of its new 3 gigahertz Pentium 4 processor. Intel had originally planned to introduce the 3.0 gigahertz Pentium 4 processor by the end of the year. The earlier date will give manufacturers an edge in getting machines ready for the Christmas buying season. Intel also is reportedly accelerating the introduction of its 2.80 gigahertz Pentium 4 as well. (Via Internet)

**

RADIO IN SPACE: IO - A JOVIAN TRANSMITTER

From the science page comes word of a kind of natural transmitter in orbit around the planet Jupiter that has no magnetic field. Roy Neal, K6DUE, has more:

--
There are many mysteries in deep space. Men and their machines are hard at work trying to resolve them. At the heart of unmanned space flight, the Jet Propulsion Laboratory, in Southern California is home to the huge antennnas that control the space ships that go out in the attempt to unlock the secrets. It also is home to amateur radio station W6VIO and many of the hams who run the station take part in the deep space endeavours.

The latest report says they have found that IO, a volcanic moon circling the planet Jupiter, transmits charged particles…easily detectable as power and noise. But the moon apparently has no magnetic field. These data were gathered by NASA’s Galileo spacecraft as it orbited Jupiter for the last 6 years.

The discovery took on importance last Fall. The researchers were trying to determine whether the moon created its own magnetic field inside the massive one generated by Jupiter, the largest of all our solar planets. When Galileo crossed the path of a magnetic field connection between IO and Jupiter, suddenly the density of the charged particles through which it was passing increased…but no magnetic field was

detected. Leaving the researchers, in their earthly control room, yet anther puzzle of the universe to solve.

For the amateur radio newsline, Roy Neal, K6DUE
--

More on this fascinating finding is available in cyberspace at www.jpl.nasa.gov/videos/Io (NASA-JPL)

**

INTERNATIONAL - CANADA: VO1MX APPOINTED ASSISTANT DIRECTOR

On the international wire word that Dan Goodwin, VO1MX, of Gander Newfoundland has been appointed as an Assistant Director for the Radio Amateurs of Canada Atlantic Region in Central Newfoundland. Goodwin fills a vacancy that existed in the central region of Newfoundland serving the major centers of Gander and Grand Falls-Windsor. (RAC)

**

INTERNATIONAL - ARGENTINA: HAMS TO GET 136 KHZ ALLOCATION

Hams in Argentina are getting access to the 136 kHz band. Roberto Beviglia, LU4BR, who is the President of the Argentinean national amateur radio society says that his group made the rules change request to the Argentine radio regulatory department. The government agreed. As a result, 135.7 to 135.8 kHz has been initially allocated to that nations amateur service on a secondary basis. (GB2RS)

**

DX

In DX, word that Laurence Howell, GM4DMA, is active as portable 9M6 on the High Frequency bands and 6 meters from Sabah now until the 30th of September. He is there to teach communications theory and to set up a new country headquarters communications base for the youth development charity Raleigh International. (GB2RS)

And the ARRL DXCC desk has announced a new 30 meter DXCC Single Band award. Applications for this award will be accepted beginning on October 1st. The new 30 meter DXCC certificates will be dated, but not numbered. (ARRL)

**

THAT FINAL ITEM: FLYING THE FLAG

And finally this week a look back to the way ham radio commemorated 9-11. This week its the story of two Florida hams who took to the air to fly the flag. In their case it was not by radio but rather in a Cessna 172 aircraft carrying several U-S flags as a part of an event called Flight Across America. The pilot at the controls was veteran aviator Steven Crow, K4CPX:

--
K4CPX: “What they did was to assign somebody from every state to carry their state flag into New York City to be there originally on 911. But they locked down New York City again for 911 so they had to do it a few days early.

Those airplanes that could not come to New York or wouldn’t because there were only fifty airplanes carrying state flags -- they wanted to have an airplane at each airport fly aloft for this commemoration which we did.

Then I came up with the idea of carrying flags for individuals. For people who wanted their flag commemorated with a flight on Flight Across America. So we did and we carried five flags aloft and we put a seal on them and signed them and gave them back to the people after we got back on the ground."
--

Accompanying K4CPX was Wendall Peterson K0REQ as co-pilot and Julius Ehland as the bearer of the flags. And on the morning of 9/11 the three made their way to Punta Gorda's Charlotte County Airport only to find it not to be a great day to venture into the sky:

--
K4CPX: "We went out to the airport anyway and stood around watching the rain sweep through. It is a pretty large airport with 6000' runways and I think we were the only pilots and the only flight that was even there that day."
--

Finally a slight break in the weather:

--
K4CPX: "We hung around and hung around another couple of hours -- all the time watching -- and looking at the RADAR -- and check it and see this stuff coming through. And we found a bit of a hole and decided -- lets jump in and take a quick look from the end of the runway and maybe aloft and maybe we can get the flight in."
--

And that's exactly what they did:

--
K4CPX: "We took off; climbed up to 1000 feet, turned sharply ahead of some heavy weather coming in and came right around the airport and landed on another runway and we were on the ground. We were probably in the air a total of maybe 12 or 13 minutes."
--

The important thing is that the flags were flown and returned to their owners. And while Steve and Wendall did have some 2 meter ham gear on board the Cessna they never bothered to turn it on. This was 9/11 and commemorating the day was what the flight by these two radio amateurs and their friend had really been all about. (ARNewsline™)

What would it take to make some sort of suitable sound creating device
(why not get a tone oscillator kit, and learn some theory at the same time? :->)
that makes a sound, and then make/break the sound with a key. You only
hear the sound, when the key is depressed. Of course, I'm speaking of a
J-38 style straight key. Many people don't agree, but being able to SEND
good CW is as important as the ability to receive good CW.

> Well, your method worked for you and my method worked for me. We both
> were able to copy CW at a pretty fair clip, in a relatively short period

Hi Dan,

Seems to be exactly what I need using an ADIF file.

Many thanks.

2975. DX Pile-up size

Newsgroup: rec.radio.amateur.dx
Date: 2002-09-26 22:50:49 UTC
From: Richard Eckman <NOko4mrSpAm@arrl.net>
Message-ID: <dbMk9.30500$IL6.1866099@news2.east.cox.net>
Source record: 12051

As I sit here listening to a barely audible P5/4L4FN on 10m (~2235 UTC 9/26), I wonder just how many people are in the pile-up. I recall that a member of the D68C dxpedition wrote an interesting article in the RSGB journal, "Radcom", last year (which I unfortunately can't seem to locate at present) that tried to estimate the number of "fairly serious" dxers in the world. There were around 45,000 unique calls in the multi-week D68C expedition log. Based on that number and the rate of unique calls still being worked towards the end of their operation, their ballpark figure, if memory serves, was around 50-60K amateurs (worldwide) who were genuinely interested in chasing DX.
At present, the P5 is mostly working North American stations. The pileup sounds like a complete mess of overlapping signals. I would imagine that there are at least a couple hundred amateurs currently throwing their calls into the pileup (10-20 kHz of bandwidth). But, I wonder if I could be as much as an order of magnitude off? I don't suppose that there's any really good analytical way to guess how many are calling him at the moment. Anyone have any opinions on this?
Anyway, just a thought to throw out while I wait in the likely vain hope (this evening) that Ed's signal may become a bit more audible on the east coast, like earlier in the week.

73,

Rich Eckman KO4MR

This is something I've wondered about since I was in my
first pile-up back in 1954. "How many am I competing against?"

Listening to the P5 pile-up from the west coast is interesting.
Almost pure white noise with the beam toward P5.
That's from all the NA callers via backscatter :-)
Every 10 or 20 seconds a few letters of some call would pop out.

I would guess there were many hundreds of stations calling,
perhaps a few thousand. One could make some assumptions
about the total emitted ERP, the path loss, and received signal
strength and get an estimate? Suspect there are too many unknowns.
So maybe the estimates from DX logs might be better.

It's a lot easier to work him from the west coast ... when there
is no propagation to the rest of North America :-)

Hey keep diggin in there.
I am just getting back to DX after a 12 year lull with no hf rig.

But I had similar thoughts back when I was running my 100W
Yaesu trying to get a DX pidition in Mongolia.
I didn't figure I had any chance with the KW's or more out there
beating up the waves.... Must have been some dumb luck and
timing, I nearly fell out of my chair when he gave my call back
and a qso then I got the qsl card. Wheee. Hang in there.
Try split freq with the tx up and down a bit from the crowd
and try at different times from the end of his calling CQ.

After looking at the DXCC honor roll published in QST and
from my own personal experience, it all seems to me that most
folks can just buy a big rig - ant. - and pay lots for return QSL
cards sending sase's with big tips in them and before long they
also have their DXCC.

Just a personal opinion, but I enjoy to rare contacts and getting
unusual cards back. One ham owned a plastic factory and his
card was a thin piece of plastic with his info molded right in. lol
And I like to stick the pins in the globe for the contacts.... makes
visitors ask about the globe and off goes a conversation for ham
radio. Want to talk on the mic..... Scares most folks to start with.
Except kids. ;-)

Good Luck 73

Rich,

I have no hard info on pile up size, but my gut tells me (after 39 years of hamming) that last night there were probably a thousand in the spread.

And I recommend patience and keep listening. I have listened many evenings and not been able to hear a peep from Ed, but last night at 2302Z he was a legitimate 59 in WNY (the strongest I ever heard him - usually my S meter doesn't move) and I worked him! Propagation is very fickle and you have to be in the right place at the right time, which on these hards ones means hours of listening.

Good hunting.

Greetings,

Been a while since I posted. Hope all are well and howdy to AC6V if you're out there.

Has anyone been getting through to any of the DX Ops listed in the latest (9/23) Ohio-Penn DX Bulletin ? I'm especially interested in the African and Pacific stations. I realize I could crawl through the Cluster archives but I thought it might be a time (and effort) saver to ask who's hitting what if any. Freqs would be helpful as well. I have moved and now have the shack in one room and the PC 30 feet away which makes following the spots a much more healthful exercise, Hi Hi ! Thx. for reading and/or replying. (By tonite maybe?)

I'm still waiting too, but I don't feel so bad since my compensation
this week was to work P5/4L4FN on 10 meters Sunday afternoon.
It was only the third time I had ever even heard him.

You want fast QSLing? I hope you get a chance to work this guy
because his manager (Bruce KK5DO) has got to be the fastest I
have ever worked with. Check out the following:

1. Work Ed on 9/22
2. Send out card on 9/23
3. Confirm QSO on-line 9/24
4. Confirm on-line my card received 9/25
5. Ed's card arrived today 9/28

I'm still dizzy...

Have a look at
http://clx.muc.de/ for a clx dx-cluster under linux
or
http://www.dxcluster.org/ fir dx-spider clsuter under linux
of windows

Try to get this working. atfer this you will need a few
links to get the info via packet or internet.
Then you have your own dx-cluster

2999. Ask for callsign validation

Newsgroup: rec.radio.amateur.dx
Date: 2002-10-01 17:34:44 UTC
From: lombryt@hotmail.com
Message-ID: <db35a0c.0210010934.696d61c2@posting.google.com>
Source record: 12075

Hi,

With some chance some of you could help me in identificying some
callsign I heard on QRG.

Do you confirm the following QSO as I am not sure of their respective
callsigns ?
28 sep 2002, 28.480 Mhz, 0918z, TG4ATZ ? with UA9CQR
28 sep 2002, 28.490 Mhz, 0943z, ZS1FP or FPJ ? with another stn

These callsigns are not listed on the DXspot server.

Thanks in advance

Thierry

Have you tried eqsl.cc?

Must have been a JA on holiday. I had a similar one last year, T88DX. He sent me the card via the buro I think.

REALISTIC PRO-2040 SCANNER - Canadian Version
With Descriminator tap Mod, RCA type plug added to rear of unit to connect DATA SLICER which I'm also selling
Excellent scanner, I've decoded ACARS, FLEX, POCSAG paging, MDT, MOBITEX, etc with the data slicer and my PC
I will even include the software. This scanner can receive cell phone transmissions also. Original box, manual,
telescopic antenna and power adapter included. -$115.00

REALISTIC DX-390
With Mute and Beep Mod!, Manual and Power Adapter, excellent condition, NO BLOWN FETS! -$65.00

GRUNDIG YACHT BOY 400PE
With Mute and Fine Tune Mod!!!, Manual, Original box, carrying case, Wall Adapter, long-wire external antenna,
Hardly used! -$105.00

GE SUPERADIO III
High performance AM/FM reception, very clean and in excellent shape, I've dxed stations as far away as Texas!!
on this one. (I'm in Ontario, Canada) -$30.00

BELTEK 23 CHANNEL AM TRANSCEIVER
This one's an oldie, looks like a mid seventies transceiver, couldn't find anything on the web about it. It measures about
12x10x4 in an all metal cabinet, it has a 120v ac as well as connections for 12v mobile. This is a solid state transceiver
and it works. -$15.00

I'm located in SW Ontario, shipping to anywhere in North America is about 8-12 dollars for these items.

Regards.

3003. Quecan warning (Sunair GSB-900)

Newsgroup: rec.radio.amateur.dx
Date: 2002-10-02 03:26:46 UTC
From: Don Smith <desmith@innercite.com>
Message-ID: <upkpuu3ltbi4cf@corp.supernews.com>
Source record: 12079

Well it looks as though Quecan of Canada is going to try to shaft me on the Sunair GSB-900SC I purchased from them through Ebay.

I paid almost 500.00 for it plus 100.00 shipping. Upon arrival I found that there were problems in the power supply, It had a bad microphone, the power cord was missing, and that nine printed circuit boards were removed and missing.

I attempted to contact them and they avoided me for a couple of days. When they finally did I contact me I was told that it was sold AS-IS and I was stuck with it. I tried to get them to agree in either a partial or full refund or even to just send the boards. So far they have refused to try and correct the situation in any way.

While I can repair the problems in the power supply and even replace the mike cord, I do expect that the radio be complete.

Can I get any of my fellow green radio collectors to contact them and help get this resolved.

The contact person is Christiane Boplduc
813 St-Jacques
St-Jean-sur-Richelieu,
Quebec J3B 2N2

Telephone 450 346-7460
Fax 450 346-7638
Email quecan@qc.airca.com

Any help would be greatly appreciated. Thanks Don Smith KB6GQA

3004. Trouble with G4ZFE log search applet

Newsgroup: rec.radio.amateur.dx

From: Al Schwarz <ramtown@optonline.net>
Message-ID: <MYAm9.59253$9d3.2284288@news4.srv.hcvlny.cv.net>
Source record: 12080

Hi...

Whenever I go to any site that has the G4ZFE log search applet, all I get is one huge gray box. I am running IE6 and have java enabled. Other sites with apps requiring a java-aware browser seem to work fine. Any pointers?

I would guess a slim. Isn't VU4 like Navassa and Desecheo - no landing
permits.

Has there been any recent, or anticipated,
activity on Desecheo?

Hopefully you have told eBay about your experience. You can at least give the dealer a black mark on eBay which will hopefully warn other potential customers. And enough black marks can even ban them from eBay.

ups trashed my ft-one beyond repair... so i am parting
it out...

gone - if board, ram board, fm board
left - everything else, including knobs, meters, power
supply, etc.

i also have the original owners manual and the yaesu
technical (service) manual...

no reasonable offer(s) refused!

mitch, w4oa

Message-ID: <3D9CA01A.8AC1F8CE@erols.com>
Source record: 12084

****Since there have been no other spots, bulletin announcements
and a suspicious callsign suffix of VU4CW I think it is safe to say
it was a slim....

It is my understanding that any operation from Andaman/Nicobar is
restricted to Indian citizens only and even that will not guarantee
access.
